Re: **Phase I Environmental Site Assessment**
Hartford-Brainard Airport
233 Maxim Road/Lindbergh Drive
Hartford, CT

Dear Mr. Madden:

Please find enclosed the draft Phase I Environmental Site Assessment (ESA) report for the Hartford-Brainard Airport property located at 233 Maxim Road/Lindbergh Drive in Hartford, Connecticut.

We appreciate the opportunity to provide our services. If you have any questions or comments, please reach out to Jim Olsen at (860) 704-4761 or JTOlsen@tighebond.com.

Very truly yours,

TIGHE & BOND, INC.

James T. Olsen, PG, LEP
Vice President

Project Scientist

Table of Contents

Section 1 Introduction

1.1 Purpose 1-1
1.2 Scope of Work 1-1
1.3 Significant Assumptions 1-2
1.4 Limitations and Exceptions 1-2
1.5 User Reliance....1-3

Section 2 Site Setting

2.1 Location and Legal Description....2-1
2.2 Site and General Vicinity Characteristics 2-1
2.3 Current Use(s) of the Property 2-1
2.4 Historical Use(s) of the Property....2-3
2.5 Structures, Roads, and Other Site Improvements....2-3
2.5.1 Utilities Provided to Site 2-4
2.6 Current Uses of Adjoining Properties....2-4

Section 3 User Provided Information

3.1 Land Title Records....3-1
3.2 Environmental Liens or Activity and Use Limitations 3-1
3.3 Specialized Knowledge....3-1
3.4 Commonly Known or Reasonably Ascertainable Information 3-1
3.5 Value Reduction for Environmental Issues 3-1
3.6 Owner, Property Manager, & Occupant Information 3-2
3.7 Reason for Performing the Phase I ESA 3-2

Section 4 Site-Specific Environmental Assessment Reports

4.1 Hartford Brainard Airport Master Plan Study, Final Draft Technical Report, Hoyle, Tanner, & Associates, Inc., November 1986....4-1
4.2 Connecticut Army National Guard, Underground Storage Tank Program, CONNDPW Project No. BI-2B-760, CONN Military Department Project No. MD-94-Z, Tank Removal Report, Brainard Field Armory, Hartford, Connecticut, December 1993 4-1
4.3 Task 120 – Preliminary Site Evaluation Assessor's Map 232, Block 3, Lot 1, 233 Maxim Road/Lindbergh Drive Ramp Reconstruction, Brainard Airport – Central Portion, Hartford, Connecticut, Storch Associates, May 1997 4-2
4.4 Task 210 Subsurface Site Investigation Report, Brainard Airport Maintenance and ARFF Facility, Hartford, Connecticut, July 29, 2011 4-3
4.5 Phase I Environmental Site Assessment, TRC Environmental Corporation, September 4, 2012 4-4
4.6 UST Closure Letter Report, Zuvic, Carr, and Associates Consulting Engineers, May 16, 2019....4-4
4.7 HBMA Reports....4-5

Section 5 Records Review

5.1 Standard Environmental Records Search 5-1
5.1.1 Subject Site 5-2
5.1.2 Surrounding Properties 5-8
5.1.3 Orphan Site Summary 5-21
5.2 Local File Review 5-21
5.2.1 City Clerk's Office 5-21
5.2.2 Tax Assessor's Office 5-22
5.2.3 Health and Human Services 5-23
5.2.4 Planning and Zoning Department/Licenses and Inspections 5-23
5.2.5 Fire Department 5-23
5.2.6 Water Department (MDC) 5-25
5.2.7 Public Works - Engineering 5-25
5.3 CTDEEP File Review 5-26
5.4 Connecticut Airport Authority (CAA) 5-31
5.5 US Army Corps of Engineers 5-38
5.6 Connecticut Historical Society 5-38
5.7 Physical Setting 5-39
5.7.1 Topography and Groundwater Flow 5-39
5.7.2 Soil Information 5-39
5.7.3 Geology 5-39
5.7.4 Groundwater and Surface Water Quality 5-40
5.7.5 Flood Plain, Wetlands, Aquifer Protection Area, and Natural Diversity Information 5-40
5.7.6 Environmental Justice Areas 5-41
5.8 Historic Use Information 5-41
5.8.1 City Directories 5-41
5.8.2 Aerial Photographs 5-45
5.8.3 Topographic Maps 5-47
5.8.4 Fire Insurance Maps 5-48
5.9 Historic Adjoining Property Use 5-48
5.10 Potential for Vapor Encroachment 5-49

Section 6 Site Reconnaissance

6.1 Methodology and Limiting Conditions 6-1
6.1.1 Non-Scope Considerations 6-1
6.2 Visual Site Inspection 6-1
6.2.1 Interior Observations 6-1
6.2.2 Exterior Observations 6-2
6.3 Summary of Environmental Site Features 6-2
6.3.1 Hazardous Substances and Petroleum Products (Drums & Containers) 6-2

6.3.2 Underground and Aboveground Storage Tanks.....6-7
6.3.3 Wells, Drywells, Floor Drains, Trenches, Sumps, Manholes, Catch Basins, and Oil/Water Separators.....6-9
6.3.4 Odors.....6-11
6.3.5 Pools of Liquid.....6-11
6.3.6 Potential Polychlorinated Biphenyls (PCBs).....6-11
6.3.7 Pits, Ponds, and Lagoons.....6-13
6.3.8 Staining – Interior Floors, Exterior Soil, and Pavement.....6-13
6.3.9 Stressed Vegetation.....6-14

WSS	Web Soil Survey

Section 1
Introduction

1.1 Purpose

Tighe & Bond, Inc. has completed a Phase I Environmental Site Assessment (ESA) on behalf of BFJ Planning (the "Client" & "User") for the Hartford-Brainard Airport located at 233 Maxim Road/Lindbergh Drive in Hartford, Connecticut (the "Site"). The Site location is shown on Figure 1.

The purpose of the Phase I ESA was to identify, to the extent feasible, Recognized Environmental Conditions (RECs), Controlled RECs (CRECs), Historical RECs (HRECs), and Areas of Concern (AOCs). This assessment included a visual Site reconnaissance as well as research and interviews with the User of this report, Site occupants, and regulatory agencies as described herein. This report also renders an opinion as to whether the site would likely be considered an "Establishment" as defined under the Connecticut Property Transfer Act (Sections 22a-134 through 22a-134e of the Connecticut General Statutes).

Tighe & Bond understands this Phase I ESA was commissioned by the User and the Connecticut Department of Economic and Community Development (DECD) on behalf of the state to assess the current and potential alternative uses of the Site.

1.2 Scope of Work

This assessment was prepared in general accordance with the American Society of Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Designation: E1527-21), FAA Order 1050.19C, EPA All Appropriate Inquiry (AAI), and the Connecticut Site Characterization Guidance Document (SCGD), except as stated specifically in this report and the scope of services in our proposal to BFJ Planning, signed March 24, 2023. This report contains the limitations inherent in these methodologies in addition to those limitations presented in Appendix H of this report.

This Phase I ESA was conducted to identify AOCs as defined in the Connecticut Department of Energy and Environmental Protection (CTDEEP) SCGD and RECs as defined in ASTM E1527-21 Standard Practice for Environmental Site Assessments (the ASTM Phase I Standard) resulting from past or present activities on the subject property and to determine if surrounding properties have the potential to impact soil, groundwater or soil vapor on the subject property.

The term *area of concern* (AOC) is defined in the CTDEEP SCGD as the location(s) or area(s) at a property where hazardous waste and or hazardous substances (including petroleum products) have been or may have been used, stored, treated, handled, disposed, spilled, and/or released to the environment.

The term *recognized environmental condition* (REC) is defined in ASTM E1527-13 and E1527-21 as the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to any *release* to the *environment*; (*2*) under conditions indicative of a *release* to the *environment*; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis* (aka, trivial or minor) conditions are not *recognized environmental conditions*.

The term *controlled recognized environmental condition* (CREC) refers to a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority. Such satisfaction may be the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (i.e., property use restrictions, activity and use limitations, institutional controls, or engineering controls). A CREC is used to explain conditions at contaminated sites that have received risk-based regulatory closure, where no further remediation is required but residual contamination still exists, and the property is subject to some sort of control or use restriction. These sites, where contamination is controlled, could still pose ongoing or future obligations on the owner, such as special precautions during construction or grading activities.

The term *historical recognized environmental condition* (HREC) refers to a past release that has been remediated to below "residential" standards and given regulatory closure with no use restrictions. HREC is defined in the ASTM Phase I ESA standard as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls." An HREC is distinct from CREC, which applies to a site that has received regulatory closure but is subject to controls.

The assessment consisted of a visual reconnaissance of accessible areas at the Site on March 6, 2023, a review of available municipal records, a review of available CTDEEP files, a review of Connecticut Airport Authority (CAA) files, a review of the Connecticut Historical Society Files (CHS), a review of the United States (US) Army Corps of Engineer files, State and Federal environmental databases as they pertain to the Site and surrounding properties, and local records available online from certain municipal offices as described herein, in addition to interviews with individuals knowledgeable about the Site.

1.3 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the site may have occurred which could not be identified. The conclusions and recommendations regarding environmental concerns that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

1.4 Limitations and Exceptions

The report has been prepared in accordance with generally accepted environmental methodologies referred to in the ASTM Phase I Standard and contains all the limitations inherent in these methodologies in addition to those limitations presented in Appendix H of this report. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report.

The conclusions of this report are based, in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the Site in locations not specifically investigated. Should such an event occur, Tighe & Bond must be notified in order that we may determine if modifications to the conclusions are necessary.

The objective of this report was to assess environmental conditions at the Site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. A copy of the complete limitations and exceptions can be reviewed in Appendix H.

1.5 User Reliance

This report has been prepared for the sole and exclusive use of the Client and User (BFJ Planning). Reliance on the information and conclusions in this report by any other person or entity is not authorized without the written consent of Tighe & Bond through a Reliance Letter. Tighe & Bond assumes no liability for use of this report by any person or entity other than the Client and specified user(s) for whom it was prepared.

Section 2
Site Setting

2.1 Location and Legal Description

The Site consists of one parcel of land identified as 233 Maxim Road/Lindbergh Drive in Hartford, CT. According to the City of Hartford Tax Assessor, the airport is also associated with the addresses of 251 Maxim Road, 233-299 Maxim Road, and Lindbergh Drive.

The parcel is identified as Map 333/Block 77/Lot 003 by the City of Hartford's Tax Assessor and includes approximately 200 acres of land. The Site is bounded by commercial/industrial properties to the north, south, and west. The Connecticut River abuts the eastern property boundary transected by the Clark Dike, a flood control structure. According to the City of Hartford, the Site is owned by the State of Connecticut Airport Division – Aeronautics. As of July 1, 2013, all airport-related activity formerly administered by the Connecticut Department of Transportation (ConnDOT), is under the purview of the Connecticut Airport Authority (CAA). The Site location is shown in Figure 1 and a Site plan aerial photograph is presented in Figure 2.

2.2 Site and General Vicinity Characteristics

According to the City of Hartford's zoning maps, the Site is zoned as "ID-1" for industrial use but also overlays the Connecticut River District "CT R". The area surrounding the Site is primarily commercial and industrial with significant asphalt and structure development. The Materials Innovation and Recycling Authority (MIRA) trash to energy facility abuts the northern property boundary. The Metropolitan District Commission (MDC) wastewater treatment plant abuts the southern property boundary. The eastern property boundary abuts the flood containment dike (Clark Dike) followed by the Connecticut River. The western property boundary abuts multiple commercial and industrial businesses. Historically, the regional area was cow pasture and open fields until the development of the airport. The surrounding area became predominately commercial/industrial between the 1960s-1970s. Maxim Road abuts portions of the northern property boundary. Brainard Road abuts a portion of the southwestern property boundary. Lindbergh Drive abuts the majority of the western property boundary. Site access is generally provided from entrances off Maxim Road and Lindbergh Drive.

2.3 Current Use(s) of the Property

The Site is currently leased by the State of the Connecticut to several tenants predominately for aircraft use. The Connecticut Department of Transportation (ConnDOT) is identified as the airport owner, with several main tenants including the Connecticut State Police and Connecticut Urban Search and Rescue (former CT Air National Guard), Hartford Jet Center, VIP Avionics, and the CT Aero Tech School. The following table lists the known Site occupants with a brief description of each the 19 buildings and tenant occupation. Buildings were previously identified alphabetically in the 2012 Phase I ESA by TRC and therefore the nomenclature has been carried over for historical consistency.

Table 2.1 Site Occupants

Building ID	Year Built	Footprint (square feet)[1]	Tenant(s)
*** Most recent tenant as of March 2023[2]**			
H1 – First Base Operator (FBO) Hangar (Building E[3] – 20 Lindbergh Drive)	1984	24,920	Hartford Jet Center*, Atlantic Aviation, Total Aircraft Repair, Air One, Inc., and Exxel Avionics – Airplane Repair and Maintenance
FBO Office/Restaurant (Building D – 20 Lindbergh Drive)	1984	6,000	Hartford Jet Center* – Offices and Restaurant
H2 – FBO Hangar (Building C- address not listed)	1967	11,320	Hartford Jet Center*, Atlantic Aviation – Airplane Repair and Maintenance
H3 – FBO Hangar/Office (Building B – 58 Lindbergh Drive)	1967	15,760	Hartford Jet Center*, VIP Avionics*, Cross Country Aviation – Airplane Repair, Maintenance, and Offices
H4 – FBO Hanger/Office (Building A – address not listed)	~1986	13,000	Vacant*, Aetna – Airplane Storage
CAA – Maintenance Garage (Building F – 233 Maxim Road)	1922	7,000	CAA* – Airport Equipment Maintenance and Storage
CAA – Maintenance Shop (Building G – 239 Maxim Road)	~1940	2,700	CAA* – Airport Manager Office / Fire & Rescue
CAA – Administration (Building H – 251 Maxim Road)	1927	2,600	Vacant*, Bureau of Aviation and US Army Star Base Education Center – Office and Classroom
CT State Police/Urban Search and Rescue/Former National Guard (Building I – 269 Maxim Road)	1945	26,650	CT State Police/CT Urban Search and Rescue*, Former National Guard Armory – Airplane Storage, Vehicular Storage, Emergency Equipment and Supply Storage
T-Hangar 1-10	1960	8,700	Individual Tenants – Airplane Storage
T-Hangar 11-20	1966	9,920	
T-Hangar 21-30	1966	9,920	
T-Hangar (230 Lindbergh Drive)	~2003	20,000	
T-Hangar (240 Lindbergh Drive)	~2003	20,000	
FAA Control Tower	Est. 1990	600	FAA* – Airport Control Tower
CT Aero Technical School (500 Lindbergh Drive)	2008	30,000	State of CT Aero Technical School* – Aviation Maintenance and Repair Courses
Engine Test Cell Building	2008	1,100	State of CT Aero Technical School* storage and aircraft engine testing
CAA – Sand/Urea Shed	1970	1,000	CAA – Salt/Sand Storage Building
CT State Police – Abandoned Building	~1950	1,150	Vacant*
CAA – Airport Rescue and Fire	2013	8,000	CAA* – Airport Equipment

[1] Building footprint determined by approximate structure dimensions.
[2] A tenant list was requested from the FBO however one was not provided at the time of this report.
[3] Previous building nomenclature from the 2012 Phase I ESA prepared by TRC.

Building ID	Year Built	Footprint (square feet)[1]	Tenant(s)
*** Most recent tenant as of March 2023[2]**			
Fighting (ARFF – 4 Maxim Road)			Maintenance and Storage

2.4 Historical Use(s) of the Property

The Site was historically utilized as cow pasture prior to development as the Hartford-Brainard Airport in 1921. The Site, known as Brainard Field, was dedicated as the first municipal "flying field" in New England. The Site is historically known as the first landing spot after Charles Lindbergh's first transatlantic flight. The Connecticut National Guard also utilized the Site for pilot training from 1923 until post World War II.

Historically, the Site has been prone to severe flooding due to the proximity of the Connecticut River. Following significant flooding in 1936 and 1938, the US Army Corps of Engineers constructed the Clark Dike that abuts the eastern property boundary to prevent future events.

2.5 Structures, Roads, and Other Site Improvements

The original airport totaled 351 acres and accommodated four landing strips, three of which have since been abandoned. In 1959, the State of Connecticut purchased the airport, including the current 200 acres and the existing runway 2-20. The crosswind runway 11-29 was constructed in 1966 to provide additional landing in extreme east/west wind conditions.

The Site is currently improved with 20 structures located along the northern and western property boundaries. The airport structures generally consist of maintenance garages, the Federal Aviation Authority (FAA) control tower, various offices, classrooms, and two fuel farms. Each structure is surrounded by paved parking and vehicle access or turf areas. The main helicopter pad is located east of building H1 (20 Lindbergh Drive). A smaller helicopter pad is located east of building H4 (A chain-link fence encompasses the entire Site at the property boundaries. The Site includes three aircraft runways identified as 2-20, runway 11-29, and a turf runway. Each runway is surrounded by turf and limited paved access roadways/taxiways.

A fuel farm operated by the First Base Operator (FBO – Hartford Jet Center) consists of a large concrete containment area with a 12,000-gallon Jet-A AST, a 12,000-gallon Aviation Gas 100 Low-Lead (AvGas 100LL) AST, an approximate 275-gallon gasoline AST, and an approximate 275-gallon diesel AST, associated piping, and dispensary apparatuses located approximately 180 feet northwest of building H1 (20 Lindbergh Drive). The area also contains two catch basins that reportedly discharge to a holding tank in the fuel dispensing area.

A fuel farm operated by the CAA consists of a large compartmentalized 1,000-gallon diesel/1,000-gallon gasoline double-walled steel/concrete containment AST (ConVault tank), associated piping, and dispensary apparatuses located approximately 80 feet south of building CAA ARFF (4 Maxim Road).

A Site plan showing current structures is included as Figure 3.

2.5.1 Utilities Provided to Site

Electricity is provided by Eversource via underground cables from street utility poles. Each building is currently heated by gas provided by the Connecticut Natural Gas Company (CNG) through four- and six-inch mains located beneath Maxim Road and Lindbergh Drive. Service laterals then connect each building to the gas mains. The MDC provides water to the Site through an eight-inch main located east of Lindbergh Drive and south of Maxim Road. Service laterals then connect each building to the water main. The Site is serviced by sanitary sewer provided by the MDC. According to DPW, multiple pump stations service the Site. Historically, three pump stations were referenced to serve buildings situated along Lindbergh Drive. Buildings along the northern property boundary connect to the sanitary sewer via laterals off Maxim Road.

2.6 Current Uses of Adjoining Properties

The following uses were noted for properties abutting the Site:

Adjoining Properties	
North	Maxim Road followed by the following addresses: 200 Maxim Road – Eversource (storage area) 300 Maxim Road – MIRA (trash to energy plant)
South	231 Brainard Road – MDC wastewater treatment plant
East	Clark Dike and the Connecticut River
West	Lindbergh Drive flowed by the following addresses: 195 Maxim Road – Central Auto & Transport, LLC 50 Murphy Road – Rent-A-Car 70 Murphy Road – United States Postal Service 90 Murphy Road – Northeast Electrical Distributors 96 Murphy Road – Cintas Facility Services (janitorial equipment supplier) 110 Murphy Road – Lennox Stores (parts plus, heating equipment supplier), Granite City Electric Supply, and Carrier Enterprise (heating equipment supplier) 120 Murphy Road – Tommy's Garage (auto repair shop) 132/134 Murphy Road – FleetPride (truck parts supplier) 206 Murphy Road – Sid Harvey's (wholesaler of heating, HVAC, and refrigeration) 208 Murphy Road – International Brotherhood of Electrical Workers Local 35 (labor union) 210 Murphy Road – Dumpster Rental Champs 218 Murphy Road – ProSource of Hartford (home improvement store) 220 Murphy Road – Pilkington North America Inc. (auto machine shop) 222 Murphy Road – Mikes Golf Outlet 230 Murphy Road – Fastenal Fulfillment Center – Limited Hours (building materials store) 234 Murphy Road – The Belknap White Group (flooring distributor) 244 Murphy Road – Dalene Flooring Outlet (flooring supplier) The following addresses abut the western portion of the southern property boundary: 250 Murphy Road – Metropolitan District Employees Credit Union 260-262 Murphy Road – O&G Showroom & Mason Supply Store
West	270 Murphy Road – GQ Associates LLC (clothing store) 280-320 – Multiple Tenant Building (Elite Flooring, Hilti, Topcon Solutions, PPG Paint, Club Champion, LawnPro, KE Distribution, Tee's & More, Phantom Brewery, Restaurant Supply, Beer & Wine Makers Warehouse, and Wholesale Club

Adjoining Properties	
	340 Murphy Road – Airgas (welding supply store) 160 Brainard Road – Connecticut Lighting Center The following addresses abut the western property boundary: 185 Brainard Road – Best Western Hartford Hotel & Suites 207 Brainard Road – Appears to be a vacant hotel

Section 3
User Provided Information

The User of this Phase I ESA is BFJ Planning. As such, they are subject to the terms, conditions and limitations referenced herein and as issued in connection with the Agreement and the provisions thereof. Any other use or reliance upon information provided in this report, without the specific written authorization of Tighe & Bond, shall be at the sole risk of other parties who may review this report.

A User Questionnaire was not completed at the time of this report. The CAA provided information relative to this Phase I ESA as described throughout this report. A copy of the User Questionnaire would be provided in Appendix D.

3.1 Land Title Records

Tighe & Bond requested ownership information from the municipal offices and reviewed the current deed and ownership information available on the City of Hartford Clerk's website. Tighe & Bond did not conduct a legal chain-of-title or lien search as part of this scope of work.

3.2 Environmental Liens or Activity and Use Limitations

The User contracted Tighe & Bond to review any environmental cleanup liens, engineering controls, land use restrictions or institutional controls against the Site or property that are filed or recorded under federal, tribal, state, or local law. Tighe & Bond did not identify nor made aware of any environmental liens, Activity and Use Limitations (AULs), Environmental Land Usage Restrictions (ELURs) or other similar documents during the completion of this Phase I ESA scope of work.

3.3 Specialized Knowledge

The User contracted Tighe & Bond to review the environmental history of the property and potential contacts that would have specialized knowledge. The ASTM Phase I Standard describes "specialized knowledge" as "specialized knowledge to identify conditions indicative of releases or threatened releases or that is material to recognized environmental conditions in connection with the property."

3.4 Commonly Known or Reasonably Ascertainable Information

The User indicated they are not aware of past uses of the Site.

3.5 Value Reduction for Environmental Issues

The User is unaware of the Site valuation in relation to potential environmental issues.

3.6 Owner, Property Manager, & Occupant Information

CAA personnel was interviewed and present during the Site reconnaissance visit. Information provided by the CAA or Site tenants are summarized in various sections of this report.

3.7 Reason for Performing the Phase I ESA

This Phase I ESA was prepared with the understanding that this assessment was commissioned to aid in the determination if the airport should remain open or if closure and redevelopment should be sought.

Section 4
Site-Specific Environmental Assessment Reports

The following pertinent environmental reports were made available to Tighe & Bond and their contents are summarized in the sections below. Copies of the available reports are included in Appendix E.

4.1 Hartford Brainard Airport Master Plan Study, Final Draft Technical Report, Hoyle, Tanner, & Associates, Inc., November 1986

The airport was declared Brainard Field on June 10, 1921 and named after Mayor Brainard. The National Guard Air squadron was historically present since 1923. The Site was constructed in the Connecticut River Flood Plan, which after the flood in 1936, the US Army Corps of Engineers built the Clark Dike along the eastern property boundary. The airport previously encompassed 351 acres until the late 1950s and contained four runways (2-20, 9-27, 15-33, and 5-23. All runways had been abandoned except for 2-20. The State of Connecticut purchased the airport from the City of Hartford in the 1960s. Runway 11-29 was constructed in 1966 and exists today.

A provided sketch of the Site dated May 1985 shows a fuel farm located east of building H3 (occupied then by Cross Country Aviation). Corporate Air is shown to occupy building H2. A fuel farm is depicted northeast, northwest, and north of building H1. ASTs are also shown west of the CAA Maintenance Shop (239 Maxim Road), and south of the CAA Maintenance Garage (233 Maxim Road).

Aviation fuel was known to be stored in three locations at the time associated with the FBO. Building H3 had a 12,000-gallon AvGas 100LL UST and a 10,000-gallon Jet-A UST and associated hydrants located east of the hangar. Jet-A fuel was dispensed by a 3,000-gallon and 1,200-gallon fuel trucks, AvGas 100LL was dispensed by a 1,200-gallon fuel truck. Building H1 had two 12,000-gallon Jet-A fuel USTs and a 1,200-gallon Jet-A fuel truck. H1 also had one 12,000-gallon AvGas 100LL UST and dispenser with a 500-gallon fuel truck. CAA had a 2,000-gallon gasoline UST and a 2,000-gallon diesel UST and associated dispensers located west of the CAA Maintenance Shop (239 Maxim Road).

Surface runoff is handled through a system of underground conduits directed by a catch basin system. Flooding at the airport had not been a reported concern.

Soil on the property is described as two to four inches of topsoil, followed by brown silt and fine sand approximately six to 14 feet below ground surface (ftbgs). Beneath the silt at the northern and southern extremes of the property is a layer of fine sands. A sketch of 10 soil boring locations is provided with the study dated September 1985. Soil quality does not appear to have been analyzed during the boring program.

4.2 Connecticut Army National Guard, Underground Storage Tank Program, CONNDPW Project No. BI-2B-760, CONN Military Department Project No. MD-94-Z,

Tank Removal Report, Brainard Field Armory, Hartford, Connecticut, December 1993

On December 2, 1993, a 1,500-gallon UST labeled JP-4 (D1) was removed from the ground after observed to be in poor/rusted condition. A petroleum odor and stained soils were encountered during excavation. Impacted soil was excavated from the tank area however, the presence of a sewer line and the building foundation limited further excavation of the western wall, which appeared to be the most impacted. The tank excavation was advanced to a depth of 9.5 ftbgs where the groundwater table was encountered. Laboratory results indicated final total petroleum hydrocarbons (TPH) concentrations ranged from non-detect at the eastern wall to 675 parts per million (ppm) at the western wall bottom. A total of 59.27 tons of impacted soil was excavated for off-site disposal. Mr. Erik Gothberg of the CTDEEP Oil and Chemical Spills stated further excavation was not feasible based on the physical structure limitations. Soil results also indicated a lack of volatile organic compound (VOC) contamination. A provided sketch shows the location of the tank at the southeastern corner of the State Police/Urban Search and Rescue (269 Maxim Road).

4.3 Task 120 – Preliminary Site Evaluation Assessor's Map 232, Block 3, Lot 1, 233 Maxim Road/Lindbergh Drive Ramp Reconstruction, Brainard Airport – Central Portion, Hartford, Connecticut, Storch Associates, May 1997

ConnDOT contracted Storch to complete a Task 120 for the proposed "ramp reconstruction" in an aircraft parking area north of a group of three storage hangars which are located in the central portion of the Site (T-Hangars, south-southeast of H4). The existing pavement includes a helicopter landing pad.

During the Site visit, three UST vent pipes, a concrete pad with UST fill caps, and three ASTs were observed along the northern side of the Maintenance Hangar/office (Building H3) located approximately 500 feet north of the project area. A typical heating fuel vent for a UST was observed along the western side of the Maintenance Hangar. A fuel dispensing pump was noted at the southeastern corner of that building. Vent pipes were not observed at the three storage hangars adjacent to the reconstruction area.

Captain William Parker, Jr. of the Brainard Airport Fire Department indicated that aviation fuel USTs and ASTs are located in the northwestern corner of the Site. The USTs and contaminated soil were removed from the northern and central portions of the property in the late 1980s and early 1990s. Mr. Parker stated that the three storage hangars to the south of the project never contained USTs.

Emergency incident reports were reviewed between 1974 and 1990. Significant releases include 70-gallons of gasoline to ground in February of 1985, 50-gallons of aviation fuel on June 1985, and 700-gallons of Jet-A fuel in December 1987 at the fuel farm located in the northwest corner of the property. A spill report from December 12, 1975 indicated a pilot reported an oil sheen on the Connecticut River. A letter dated May 3, 1990 from ConnDOT to CTDEEP indicated 1,700 yards of contaminated soil was stockpiled at Brainard. The correspondence is likely related to LUST removals in the 1990s. A memo dated September 28, 1990 from Metcalf & Eddy to CTDEEP indicated an incident with a fuel distribution box and contaminated soils from the northern end of the airport. The sketch included shows a fuel distribution box (1) located south of the State Police/Urban Search and Rescue (269 Maxim Road), with a fuel line leading to the northeast to fuel

distribution box (2). Fuel box (1) was the noted as the original site of the leak. Based on soil analytical results, low level petroleum impacts remained in place below regulatory criteria.

The Task 120 evaluation indicated that a Phase II ESA was conducted by Rizzo Associates Inc. for the Airport Truck Center dated November 1993. The truck center was located on Murphy Road, approximately 1,500 feet northwest of the project area. The study found low level soil and groundwater contamination in localized areas. Contaminated soil was reportedly removed and residual contamination was below regulatory limits. Prior to 1970, this property was part of the Site. Groundwater elevation data collected during the assessment indicated a groundwater divide exists on the property to the south-southwest and to the southeast toward the project area.

Based on the findings of the Task 120, Storch Associates Inc. recommended a Task 210/220 to conduct surficial/exploratory investigations within the proposed project area.

4.4 Task 210 Subsurface Site Investigation Report, Brainard Airport Maintenance and ARFF Facility, Hartford, Connecticut, July 29, 2011

Maguire Group Inc. conducted a Task 210 to support the construction of the new Maintenance and Aircraft Rescue and Fire Fighting (ARFF) Facility at the Site (current 4 Maxim Road). The facility was constructed west of the existing CAA Maintenance Shop (239 Maxim Road). The facility includes an FAA compliant wash bay and a crane bay with a 3-ton overhead crane for equipment handling.

Soils encountered during the investigation consisted of grayish brown to reddish brown silt with trace clay overlain by reddish brown coarse sand, gravel, and silt. Crushed asphalt was observed in several boring locations from approximately 4.5 to six ftbgs. A petroleum odor was detected in the fill material observed in boring GP-13 between two and four ftbgs. Fifteen soil borings were advanced to a depth of eight ftbgs. One soil sample was collected from each location and analyzed for VOCs, semi-volatile organic compounds (SVOCs), extractable total petroleum hydrocarbons (ETPH), polychlorinated biphenyls (PCBs), and total and synthetic precipitation leaching procedure (SPLP) Resource Conservation Recovery Act (RCRA) eight metals.

ETPH was detected minor concentrations below RSR criteria in soil between one and three ftbgs. Several low-level VOCs below RSR criteria were detected in soil between two and four ftbgs and four to eight ftbgs. Several SVOCs were detected in soil with some concentrations reported above RSR criteria in borings GP-9 and GP-11 between one and three ftbgs, and boring GP-13 between two and four ftbgs. Various low-level metals were detected below RSR criteria. PCBs were not detected.

Groundwater was observed in each boring at depths between 4.5 and seven ftbgs. Two groundwater grab samples were collected from GP-6 and GP-13 and analyzed for VOCs, SVOCs, ETPH, PCBs, and total and dissolved RCRA eight metals (field filtered).

ETPH was detected below effluent limits to surface water. One VOC, toluene, was detected in GP-6 below effluent limits to surface water. SVOCs and PCBs were not detected in either groundwater sample. Several metals were detected, of which arsenic and lead were above effluent limits but below sanitary sewer limits. Dissolved arsenic and lead were not detected.

Based on the investigation results, elevated concentrations of SVOCs above RSR criteria were detected in soil borings GP-9 and GP-13 between one and four ftbgs. Leachable

lead was also detected above RSR criteria from two to four ftbgs. Low concentrations of ETPH and VOCs were also detected below criteria. SVOCs were detected in boring GP-11 above RSR criteria between one and three ftbgs. A low concentration of ETPH was detected below criteria. Groundwater results from GP-6 detected dissolved arsenic at a concentration above the surface water effluent limit. ETPH and toluene were detected but below criteria. ETPH was also detected in GP-13 but below criteria.

Based on the groundwater results, and numerous reported LUSTs on the Site, the entire project limits were designated as an area of environmental concern. Low level concentrations of ETPH, VOC, and/or SVOCs were detected in borings GP-1, GP-3, GP-10, GP-12, GP-14, and GP-15 at depths ranging from one to three ftbgs or four to eight ftbgs.

4.5 Phase I Environmental Site Assessment, TRC Environmental Corporation, September 4, 2012

A total of 51 AOCs, including 4 RECs were identified by TRC in 2012. These environmental concerns/conditions were generally associated with past/present hangars where airplane maintenance, repair and refueling activities were completed as well as past and present USTs, ASTs, oil/water separators, associated piping and/or dispensing equipment.

The information contained in the 2012 Phase I ESA was reviewed for consistency with current Site conditions and records obtained during the completion of this Phase I ESA. Notable information from the 2012 Phase I ESA has been incorporated into this report. The AOC/REC list provided in the 2012 Phase I ESA was refined in this Phase I ESA.

4.6 UST Closure Letter Report, Zuvic, Carr, and Associates Consulting Engineers, May 16, 2019

A 4,000-gallon gasoline UST, a 4,000-gallon diesel UST, associated dispensers and piping were removed from the Site in 2019. The diesel UST was removed on April 24, 2019 in good condition. The gasoline UST was subsequently removed on April 29, 2019 in good condition. Three unknown pipes (not associated with the UST system) were discovered during the excavation at approximately three ftbgs. The pipes were removed along with the dispensers in the area. Staining or petroleum odors were not observed during the removal activities. A concrete pad was observed below the USTs at approximately 11 ftbgs.

Confirmatory soil sampling revealed polycyclic aromatic hydrocarbons (PAHs) above the CTDEEP Remediation Standard Regulation (RSR) criteria in soil collected below the diesel dispenser at 3.5 ftbgs. Soil was excavated below the dispenser, resampled at five ftbgs, and found to contain concentrations of PAHs below RSR criteria. A total of 13.77 tons of impacted soil was excavated for off-site disposal. ETPH was detected at low concentrations below RSR criteria.

Groundwater was observed at approximately seven ftbgs within the excavation. Two samples were collected and noted with a petroleum odor but no sheen. ETPH and total xylenes were detected in groundwater at concentrations just above the Surface Water Protection Criteria (SWPC). PAHs were detected but at concentrations below RSR criteria. Based on the results, the excavation was backfilled and paved.

4.7 HBMA Reports

While HBMA is not included as part of the scope for the Phase I ESA, the following reports were provided by the CAA:

- Asbestos Inspection Report for Brainard Airport Administration (BPW No. 21344) (EA No. 1064), Versar Risk Management Inc., December 1986;
- Asbestos Inspection for Department of Transportation Brainard Airport Maintenance Garage Building #85-003 Brainard Road, Hartford, Connecticut, EnviroMed Services, Inc., October 10 and 11, 2001;
- Lead Inspection Report for Department of Transportation Building #85-003 (Building #3) Brainard Airport Garage, EnviroMed Services, Inc., October 10, 2001;
- Lead Inspection Report for Department of Transportation Buildings #85-002 & #85-004 Brainard Fire Hangar and Crash Unit Brainard Road, Hartford Connecticut, EnviroMed Services, Inc., October 11, 2001;
- Asbestos Inspection for Department of Transportation Brainard Airport Fire Hangar Building #85-002 Crash Unit Building #85-004 Brainard Road, Hartford Connecticut, EnviroMed Services, Inc., October 10 and 11, 2001; and
- 251 Maxim Road, Hartford, CT – Pre-Demolition Hazardous Building Materials Survey, Stantec, October 16, 2020.

Section 5
Records Review

The purpose of the records review is to obtain and review records that will help identify RECs and AOCs in connection with the site. Some records reviewed pertained not only to the site, but also to properties within an additional approximate minimum search distance in order to help assess the likelihood of site environmental impacts from migrating hazardous substances or petroleum products. Unless stated otherwise the approximate minimum search distances listed in the table below were as specified in the ASTM Phase I ESA Standard.

5.1 Standard Environmental Records Search

A database search report that identifies sites listed in state and federal databases within the ASTM-required radii was obtained for the site from Environmental Data Resources, Inc. (EDR) on February 13, 2023. A copy of the complete EDR report is provided as Appendix F.

The report includes the following standard databases specified by the ASTM Phase I protocol:

Database Searched	Search Radius (mile)	Subject Site Listed	Sites Listed
Federal National Priority List (NPL)	1.0	No	0
Federal Delisted NPL	0.5	No	0
Federal CERCLIS List	0.5	No	0
Federal CERCLIS NFRAP List	0.5	No	1
RCRA CORRACT Facilities	1.0	No	4
RCRA non-CORRACTS TSD Facilities	0.5	No	1
RCRA Generators	Site & Abutting	Yes	11
Federal Emergency Response Notification System (ERNS)	Site Only	No	0
Federal Institutional Controls/Engineering Control Registry	Site Only	No	0
State (and Tribal) Hazardous Waste Sites (SHWS)/State-Equivalent NPL & CERCLIS Sites	1.0	No	1
State (and Tribal) Listed Landfills and Solid Waste Facilities	0.5	No	3
State (and Tribal) Leaking USTs	0.5	Yes	24
State (and Tribal) Registered UST/AST	Site & Abutting	Yes	21
State (and Tribal) Institutional Controls/Engineering Control Registries	Site Only	No	0
State (and Tribal) Voluntary Cleanup	0.5	No	6
State (and Tribal) Brownfields	0.5	No	4

5.1.1 Subject Site

The Site is listed in the EDR report under the following databases: CT &, RI MANIFEST, CT National Pollutant Discharge Elimination System (NPDES), CT UST, CT Recovered Government Archive (RGA) LUST/LUST, CT Contaminated or Potentially Contaminated Sites (CPCS), the Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), EDR Historic Auto, Leachate and Wastewater Discharge System (LWDS), Former Use Defense Sites (FUDS), Unexploded Ordinance Sites (UXO), and RCRA Non-Generator/No Longer Regulated (NLR). Site names listed include CT State of DOT Hartford, Brainard Airport, ConnDOT, Air One Inc., Million Air, Atlantic Aviation Inc., Charter Oak Aviation, Brainard Field, Referred to US Army Engineering and Support Center (CEHNC), Corporate Air Inc., Parcel F, National Guard Armory, and Brainard OMS-7A. The Site listings are associated with 233, 239, and 269 Maxim Road, 20 and 58 Lindbergh Drive, and Maxim Road. The following section identifies the database, Site name, and address associated with the listing, as well as a brief description of the record.

- MANIFEST
    - Refer to Table 5.1 for a record of manifests generated from the Site.

Table 5.1 Manifests

Generator	Manifest ID	Generation Date	Quantity	Substance	Disposal Facility
CT State of DOT Hartford – 233 Maxim Road	CTF0245107	January 10, 1994	140 pounds	Mercury	East Coast Environmental Service Corp. New Haven, CT
Air One Inc – Brainard Airport	RIG0195821	May 21, 2002	15 gallons	D001-Ignitable Waste	Chem-Pak Corporation Cranston, RI

Corporate Air Inc. – Brainard Airport	CTA0074993	July 17, 1985	2,500 gallons		

- RCRA Non-Generator/NLR
    - Million Air – 58 Lindbergh Drive
        - The Site is listed in the database with an EPA ID CTR000008599 that no longer generates hazardous waste as of 2013. In 1999, Million Air met the definition of a conditionally exempt, small quantity generator.
    - Air One Inc. – Brainard Airport
        - The Site is listed in the database with an EPA ID CTD108956616 that no longer generates hazardous waste as of 2002. The facility previously generated D001-Ignitable Waste. In 1989, Air One Inc. met the definition of a conditionally exempt, small quantity generator.
- EDR Historic Auto
    - Atlantic Aviation Inc. – 20 Lindbergh Drive
        - The Site is listed in the database from 2002 until 2014 as a hangar and other aircraft storage facility.
    - Charter Oak Aviation Inc. – 58 Lindbergh Drive
        - The Site is listed in the database from 1996 until 2001 as a hangar and other aircraft storage facility.
- CPCS

- Brainard Airport – 233 Maxim Road
  - The Site is listed in the database due to a LUST. Comments include multiple spill reports (Case No. 88-3422, 90-843, 92-3801, and 93-7162). Spill report 88-3422 indicates that a 1,000-gallon diesel tank failed a tightness test on August 1, 1988 and the tank was 31 years old. The tank was reportedly pumped out. Spill report 90-843 states that gasoline was detected in soil. Additional information was not included. LUST status is complete, meaning no significant environmental hazards remain and meets the EPA "LUST Cleanup" criteria.

- NPDES
  - CT State of DOT Hartford – 233 Maxim Road
    - Permit GVM001667 was issued on November 14, 2013 and expired on January 23, 2021 for vehicle maintenance wastewater. The Site also had a former permit (GVM000042). This permit was issued for an additional building with a new oil/water separator. The former permit was incorporated into the new GVM001667.
  - Brainard Airport – 233 Maxim Road
    - Permit GSW001457 was issued on November 15, 1995 and expired on October 1, 1997 for a wastewater general permit.
    - Permit GVM000042 was issued on July 13, 2001 and expired on January 23, 2011 for vehicle maintenance wastewater. The permit description indicates a renewal permit ID (GVS000648).

- UST
  - Brainard Airport – 233 Maxim Road
    - Refer to Table 5.2 below for UST information.

Table 5.2 Historical UST Inventory – 233 Maxim Road

Tank ID	Size	Tank Material	Substance	Installation Date	Removal Date	Comments

- LUST
    - (Site Name Not Listed) – 233 Maxim Road
        - The Site is listed for a LUST (Case No. 0090-00843) for a release of gasoline (Spill No. 64-8620) on March 19, 1990. A second release of diesel is also recorded under the same Spill No. documented on October 25, 1988. Each tank and associated piping were determined to have caused the releases during their removal. LUST status is complete, meaning no significant environmental hazards remain and meets the EPA "LUST Cleanup" criteria.

[4] UST B1 was also reportedly removed September 1, 1998. The December 1, 1995 date is believed to be a clerical error.
[5] The 1997 Storch Task 120 report states this tank was removed from the ground, not abandoned in place.

- Brainard OMS-7A – 269 Maxim Road
  - The Site is listed for a LUST (Case No. 49370) for a release on September 14, 1998. Comments indicate a release of heating oil from a UST. LUST status is pending, meaning a release is suspected but not yet confirmed. Additional information was not available in the listing.
- (Site Name Not Listed) – 233 Maxim Road (239 Maxim Road)
  - The Site is listed for a LUST (Case No. 2019-01943) of gasoline and diesel (Spill No. 64-8620) during UST(s) removal. Approximately 13.77 tons of soil was impacted from the release documented on April 30, 2019.

- RGA LUST
  - Brainard Airport – 233 Maxim Road
    - The Site is listed in the database for LUST incidents for the years 1996, 2002 through 2004, 2006, and 2008 through 2012.
- LWDS
  - ConnDOT – Maxim Road (east of intersection)
    - The Site is listed with a leachate and wastewater number (4005009) for active discharge. The Site is also referred to as Hartford Brainard Airport Facility No. 37.
- FUDS
  - Brainard Field – No Address Listed
    - The Site is listed in the database with FUDS No. D01CT0981 and Federal Facility ID CT9799F9036. The former Brainard Field was used by the CT National Guard beginning in 1923. The United States leased approximately 420 acres from the City of Hartford starting around 1940 as a landing for the Army, Navy, and Marine Corps planes. The lease was cancelled on January 13, 1945. The Site is currently owned by the State of Connecticut and retained ~200 acres. The other acreage is owned by multiple other entities. Additional information was not provided in the listing.
- UXO
  - Referred to CEHNC – No Address Listed
    - The Site is listed for a Department of Defense (DOD) component under the FUDS database. This was referred to the CEHNC in Huntsville Center with Site ID 01OEW. The Site type is listed as unexploded munitions and ordnance area.
- FINDS
  - Brainard Airport – 233 Maxim Road
    - FINDS is generally a pointer database to other sources of environmental information. The Site is listed with a Facility ID of 110030381156 under the Connecticut Site Information Management System (SIMS) that harmonizes environmental information for a property and the Integrated Compliance

Information System (ICIS) that identifies enforcement and compliance information of most EPA programs.

- Million Air – 58 Lindbergh Drive
  - The Site is listed with a Facility ID of 110002497511 under RCRA. Violations were not identified for the facility.

- ECHO
  - Brainard Airport – 233 Maxim Road
    - The enforcement and compliance summary identifies that the Site is subject to the Clean Water Act (CWA) with a minor permit (CTGSI0915) and RCRA regulatory programs. One formal enforcement action was identified for RCRA under the ICIS. The violation was administrative (Case No. 01-2018-8001) issued on November 21, 2017 for failing to provide adequate monthly monitoring of USTs.
    - A Pollutant Loading Report states that the receiving water of the Site (the Connecticut River) is listed as impaired due to the presence of pathogens and PCBs.

5.1.2 Surrounding Properties

Tighe & Bond reviewed relevant files for those properties within the ASTM search radii which, due to their regulatory status (i.e. open or closed), distance and/or direction, may have the potential to environmentally impact the site. The EDR report identified numerous properties within the databases and search radii described above in Section 5.1. Only listings deemed environmentally relevant are discussed below.

5.1.2.1 Connecticut Light and Power (CL&P), Connecticut Resources Recovery authority (CRRA), Mid-CT Resource Recovery Facility (Currently MIRA), 100 Reserve Road/300 Maxim Road/20 Reserve Road, Northern Adjacent Parcel

The adjacent northern property is listed in the CT UST, CT LUST, CT SPILLS, CT Manifest, CT NPDES, CT ENG CONTROLS, CT AUL, CT ASBESTOS, CT Significant Environmental Hazard (SEH), PFAS ECHO, and CT/US BROWNFIELDS databases.

- UST
  - The property previously utilized a 2,000-gallon diesel UST (A) installed on December 1, 1988 and removed from the ground November 1, 2000.

- LUST
  - The property is listed for a LUST (Case No. 59179) for a release of diesel (Spill No. 2000-09021) on November 29, 2000 during removal of a UST. Additional information is not provided in the listing.

- SPILLS
  - Refer to Table 5.6 for a list of spills at the adjacent property.

Table 5.6 Spills

Date	Spill No.	Release Quantity	Comments
July 28, 1999	99-04965	25 Gallons	Hydraulic oil released from a hose and container failure.
March 30, 2000	2000-01993	Not Report	A strong chemical odor was reported at the property. Additional information is not provided in the listing.
February 28, 2001	2001-01337	Not Report	An unknown amount of a substance was reported in the trash. CTDEEP Radiation division was contacted. Additional information is not provided in the listing.
April 11, 2002	2002-02270	Not Report	A propane tank exploded on the property. Additional information is not provided in the listing.
September 10, 2009	2009-05121	6 Gallons	Hydraulic oil released from a hose failure.
June 10, 2011	2011-03147	5 Gallons	Hydraulic oil released from a hose failure.
March 12, 2012	2012-01168	Not Reported	A release reportedly did not occur however sewage was reported per their solid waste permit. Additional information is not provided in the listing.
April 30, 2012	2012-02094	5 Gallons	Transmission oil released from a container failure. Some of the release made it to a nearby catch basin.
October 31, 2013	2013-05796	10 Gallons	Hydraulic oil released from a motor vehicle accident.
January 8, 2015	2015-00097	40 Gallons	Hydraulic oil released from a hose failure.
April 1, 2015	2015-01418	3 Gallons	Hydraulic oil released within the building from a hose failure.
November 7, 2015	2015-05926	Not Reported	A release of fire suppression runoff occurred after a fire in the mobile shredder containing solid trash. Water was reportedly used to fight the fire that then entered a storm drain.
April 17, 2017	2017-01809	Not Reported	A propane tank exploded after going through the shredder causing a fire.
March 30, 2022	2022-01283	Not Reported	A fire occurred at the facility noted from propane.

- MANIFEST
    - Manifest: 000439570JJK

        - On January 17, 2007, 490 pounds of flammable liquid (D001-Ignitable Waste) and 80 pounds of corrosive liquid (D002 – Corrosive Waste) was disposed of at Northland Environmental, Inc. in Providence, RI.

- NPDES
    - The property has had several historical permits for either sewer discharge or industrial stormwater.
- CT ENG CONTROLS
    - The property had an engineered control under the PTP. The primary concern on the property is mercury.
- CT AUL
    - An Environmental Land Use Restriction ELUR was placed on the property April 18, 2018.
- CT ASBESTOS
    - ACM was removed from the property in 2019.
- SEH
    - Pollution was detected in groundwater what discharges to a surface water body that may have posed a risk to aquatic life. Groundwater was sampled for site specific conditions and determined to not significantly impact surface water and aquatic life. No further abatement action was deemed necessary.
- PFAS ECHO
    - An EPA dataset indicates this property may have handled or had a release of PFAS.
- CT/US Brownfield
    - The property is listed as an EPA funded brownfield project.

Based on the extensive environmental history, and specifically the engineered control for mercury, known groundwater impacts, and potential PFAS contamination, there is potential that releases from this property may have impacted Site soils and/or groundwater.

5.1.2.2 Central Auto & Transport, 195 Maxim Road, West-Northwestern Adjacent Parcel

The adjacent west-northwestern property is listed in the CT SPILLS and CT MANIFEST databases.

- SPILLS
    - August 25, 2011 – Spill No. 2011-04950 – Four gallons of motor oil released to the road from a leak.
    - December 20, 2020 – Spill No. 2020-05701 – An unquantified amount of motor vehicle fluids and water to extinguish a fire released to the ground surface.
- MANIFEST

- A manifest was generated on April 3, 2017. Additional information is not provided in the listing.

Based on the identified information, proximity to the Site, and presumed groundwater flow to the east-southeast, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater due to the minor quantities associated with each historical release.

5.1.2.3 Tucker Co. (Tucker Mechanical of Division of EMCOR), 189 Maxim Road, West-Northwest, Adjacent Parcel

The property is listed in the CT PROPERTY (Transfer ACT Program) and CT MANIFEST databases.

- CT PROPERTY
  - On February 2, 2007, the property entered the Transfer Act Program after filing a Form III (indicative of a release). The property was verified by an LEP dated May 5, 2015. Additional information was not provided in the listing.
- MANIFEST
  - Manifest: CTC0207776
    - On August 22, 1988, 1,100 gallons of waste liquid (D001-Ignitable Waste) was disposed of at East Coast Environmental Service Corp. in New Haven, CT.
  - Manifest: CTC0177456
    - On June 29, 1990, 110 gallons of waste combustible liquid (D001-Ignitable Waste) and 110 gallons of F002 (spent halogenated solvents) was disposed of at Solvents Recovery Service of New England Inc. in Southington, CT.

Based on the identified information, and specifically the Form III filing, proximity to the Site, presumed groundwater flow to the east-southeast, there is potential for historical releases to impact Site soils and/or groundwater. However, the Site was verified by an LEP in 2015 and therefore the potential for environmental impact is considered low, as any releases would have been delineated and remediated as applicable.

5.1.2.4 Environmental Health Lab/CIGNA, 94 Murphy Road, Western Adjacent Parcel

The adjacent western property is listed in the CT MANIFEST database.

- MANIFEST
  - Several manifests were observed generally between 1987 and 2016. The property generated up to 200 pounds of D001-Ignitable Waste and F003 (spent non-halogenated solvents) several times. Minor quantities of mercury, lead, chromium, corrosive wastes, and reactive wastes have been generated.

Based on the identified information, proximity to the Site, and a lack of identified spills or remedial activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.5 Tommy's Garage, 120 Murphy Road, Western Adjacent Parcel

The adjacent western property is listed in the CT MANIFEST, RCRA-Very Small Quantity Generator (VSQG), FINDS, and ECHO databases.

- RCRA-VSQG
    - The property is listed with an EPA ID CTD052538493 as a conditionally exempt small quantity generator of D001-Ignitable waste since at least 1989.
- MANIFEST
    - Numerous manifests were observed generally between 1994 and 2016. The property generated typically between 15-20 gallons of D001-Ignitable Waste several times a year. Similar quantities of D018-Benzene, D039-Tetrachloroethylene, and D040-Trichlorotheylene were also generated.
- FINDS
    - The property is listed under the RCRA program.
- ECHO
    - Enforcement or compliance violations were not identified for the property.

Based on the identified information, proximity to the Site, and a lack of identified spills or remedial activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.6 Eli Whitney Regional Vocational High School, 110 Murphy Road, Western Adjacent Parcel

The adjacent western property is listed in the CT MANIFEST database.

- MANIFEST
    - Several manifests were observed generally between 1992 and 1995. The property has generated three gallons of nitric acid (D001-Ignitable Waste), five gallons of formic acid (U123), 130 gallons of waste paint related material (D001-Ignitable Waste), 55 gallons of waste ethyl alcohol solution (D001-Ignitable Waste), and between 55-165 gallons of F003 (spent nonhalogenated solvents).

Based on the identified information, proximity to the Site, and a lack of identified spills or remediation activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.7 FleetPride, 130 Murphy Road, West-Northwestern Adjacent Parcel

The adjacent west-northwestern property is listed in the CT MANIFEST database.

- MANIFEST
    - A manifest was generated on March 10, 2011. Additional information is not provided in the listing.

Based on the identified information, proximity to the Site, and a lack of identified spills or remedial activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.8 Highland Associates, 134 Murphy Road, Western Adjacent Parcel

The adjacent western property is listed in the CT UST, CT SPILLS, and CT MANIFEST databases.

- UST
    - The property previously utilized a 4,000-gallon gasoline UST (A1), a 4,000-gallon gasoline UST (A2), and a 500-gallon used oil UST (B3). Each UST was installed May 1, 1978 and removed from the ground on November 1, 1983.
- SPILLS
    - July 8, 2017 – Spill No. 2017-03404 – Approximately four gallons of hydraulic oil released due to a hose failure.
- MANIFEST
    - Manifest: CTC0265994
        - On July 26, 1989, 1,047 gallons of D001-Ignitable Waste was disposed of at United Soil Recovery Inc. in Meriden CT.

Based on the identified information, proximity to the Site, and a lack of identified LUSTs, or remedial activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.9 Dalene Flooring, 244 Murphy Road, Western Adjacent Parcel

The adjacent western property is listed in the RCRA-VSQG database.

- RCRA-VSQG
    - The property is listed with an EPA ID CTP00033836 as a conditionally exempt small quantity generator of D001-Ignitable Waste as of 2018.

Based on the identified information, proximity to the Site, and a lack of identified spills or remedial activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.10 M Q S Inspection Inc., 230 Murphy Road, Western Adjacent Parcel

The adjacent western property is listed in the RCRA Non-Generator/NLR, CT MANIFEST, RI MANIFEST, Finds, and ECHO database.

- RCRA Non-Gen/NLR
    - The property is listed in the database with an EPA ID CTD05258733 that no longer generates hazardous waste. The property previously generated D002-Corrosive Waste and F001-Spent Halogenated Solvents as a Large Quantity Generator from 1990 through 1996. A Consent Order was issued (CO 795) for violations observed in 1995 and 1997. Additional information was not provided in the listing.
- FINDS
    - The property is listed under the RCRA program.
- ECHO
    - Enforcement or compliance violations were not identified for the property.
- MANIFEST

- Several manifests were observed generally between 1991 and 1996. The property has historically generated between 3,000 and 4,000-gallons of nitric acid or nitric acid/ferric chloride multiple times a year. The property generated 55 gallons of waste petroleum distillate (D001-Ignitable Waste), 55 gallons of corrosive liquid (D002-Corrosive Waste), five gallons and 14 pounds of silver (D011), 50 gallons of F002 (spent halogenated solvents), and a total of 14,969 gallons of D002 in the mid-1990s.

Based on the identified information, and specifically the Consent Order issued for the property, proximity to the Site, and presumed groundwater flow to the east-southeast, there is potential for releases to impact Site soils and/or groundwater. The property historically utilized and stored large quantities of hazardous waste that may have resulted in a release(s).

5.1.2.11 Northeast Printing Plates, 280-320 Murphy Road and 306 Murphy Road, West-Northern Adjacent Parcel

The adjacent northeast property is listed in the RCRA Non-Generator/NLR, FINDS, ECHO, CT MANIFEST, NY MANIFEST, CT Site Discovery and Assessment Database (SDADB), CT PROPERTY, and per-and polyfluoroalkyl subtends (PFAS) ECHO databases.

- RCRA Non-Generator / NLR
  - The property is listed in the database with an EPA ID CTD065531816 that no longer generates hazardous waste as of 2003. The property previously generated D001-Ignitable Waste and U186-1,3-Pentadiene or 1-Methylbutadiene as a conditionally exempt small quantity generator since 1980.
- FINDS
  - The property is listed under the RCRA program.
- ECHO
  - Enforcement or compliance violations were not found.
- MANIFESTs
  - Several manifests were observed generally between 1987 and 1994. Typically around 90 to 100 gallons of waste perchloroethylene (F002-halogenated solvents) was generated annually. The largest generation observed was 180 gallons in 1992. The property also generated 110 gallons of waste cleaning compound liquid in 1994.
- SDADB
  - The property is listed with a Remediation ID 2647. The property was previously in the Transfer Program and was verified by an LEP on October 29, 1993. Additional information was not provided in the listing.
- CT PROPERTY
  - On January 24, 1994, the property entered the Transfer Act Program after filing a Form I (indicative that a release had not occurred). The Remediation ID was stated as 1955. Additional information was not provided in the listing.
- PFAS ECHO

- An EPA dataset indicates this property may have handled or had a release of PFAS.

Based on the identified information, proximity to the Site, and presumed groundwater flow to the east-southeast, there is potential for environmental concerns associated with this property to impact the surrounding area, including Site soils and/or groundwater concerning PFAS.

5.1.2.12 W.E. Andrews Co. Inc. of CT, 206 Murphy Road, Western, Adjacent Parcel

The adjacent western property is listed in the CT SDADB, CT MANIFEST, NY MANIFEST, RCRA Non-Generator/NLR, FINDS, and ECHO databases.

- SDADB
  - The property is listed with a Remediation ID 4483. The property was previously in the Transfer Program and was verified by an LEP on November 17, 1997. Additional information was not provided in the listing.
- MANIFEST
  - Several manifests were observed generally between 1995 and 2000. Between 165 and 270 gallons of waste cleaning compound liquid (D001-Ignitable Waste) was generated several times a year. Flammable liquid was also generated (D001) at quantities around 300 gallons per event.
- RCRA Non-Generator/NLR
  - The property is listed in the database with an EPA ID CT5000001214 that no longer generates hazardous waste as of 2002. The property previously generated D001-Ignitable Waste, U055-Benzene (methyl ethyl), and U230-Benzene (dimethyl or xylene) as a small quantity generator since 1994. A generation in 1999 included 165 gallons of waste cleaning liquid as F003 (non-halogenated solvents)
- FINDS
  - The property is listed under the RCRA program.
- ECHO
  - Enforcement or compliance violations were not found.

Based on the identified information, and specifically the SDADB listing, proximity to the Site, presumed groundwater flow to the east-southeast, there is potential for releases to impact Site soils and/or groundwater. Although the Site was verified by an LEP in 1997 and the potential for environmental impact associated with releases prior to the 1997 Verification is considered low, potential Transfer Act triggering operations appeared to have continued since that time (based on hazardous waste generation dates). However, there have been no reported spills or new database entries in connection with this property and potential environmental concerns associated with this property is not likely to impact Site soils and/or groundwater.

5.1.2.13 Crosier Business Forms, 320 Murphy Road, West-Southwest-Northern Adjacent Parcel

The adjacent west-southwest-northern property is listed in the CT MANIFEST database.

- MANIFEST

- Several manifests were observed generally for 1990. The property has generated various hazardous wastes including five gallons of flammable liquid (D001-Ignitable Waste), 40 to 120 pounds of corrosive liquid (D002-Corrosive Waste), 900 pounds of waste flammable liquid (D001), 10 pounds of compressed gas (D001), five gallons of waste petroleum distillate (D001), five pounds of waste oxidizer (D001), five gallons of waste liquid with methylene chloride (F002), and 150 gallons of waste tetrachloroethylene (U-210).

Based on the identified information, proximity to the Site, and a lack of identified spills or remediation activities, environmental concerns associated with this property is not likely impacting Site soils and/or groundwater.

5.1.2.14 Murphy Road Recycling, Inc., 123-143 Rear Murphy Road, Approximately 384 Feet West-Northwest from the Site

The property is listed in the solid waste facility (SWF)/land fill (LF) database.

- SWF/LF
  - The property has a permit to operate as a volume reduction facility. The permit expired on June 28, 2009.

Based on the identified information, proximity to the Site, and a lack of identified spills or remediation activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.15 United States Postal Service, 70 Murphy Road, Western Adjacent Parcel

The adjacent western property is listed in the CT SPILLS and CT MANIFEST databases.

- SPILLS
  - December 21, 2001 – Spill No. 2001-10812 – A package with unidentified white powder was found and sampled. Additional information was not provided in the listing.
- MANIFEST
  - One manifest was observed for 700 and 230 pounds of mercury (D009) generated on March 27, 2000 and disposed of at Northeast Lamp Recycling Inc. in East Windsor, CT.

Based on the identified information, proximity to the Site, and a lack of identified spills or remediation activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.16 Mid-CT Regional Recycling Center (CRR/Amandi Services), 211 Murphy Road, Approximately 390 Feet West-Northwest of the Site

The property is listed in the PFAS ECHO, CT SPILLS, CT MANIFEST, and CT NPDES database.

- PFAS ECHO
  - An EPA dataset indicates this property may be handling or have had a release of PFAS.
- SPILLS

  - May 26, 2005 – Spill Case No. 200503245 – 20 gallons of hydraulic oil released due to broken hose.
  - May 3, 2010 – Spill Case No. 201002585 – Less than five gallons of hydraulic oil released from a motor vehicle accident.
  - January 5, 2012 – Spill Case No. 210200059 – Three gallons of hydraulic oil released from a hose failure.
  - October 23, 2012 – Spill Case No. 201205797 – Fire and smoke was reported within the building.
  - December 8, 2016 – Spill Case No. 201606672 – Less than two gallons of hydraulic oil released from a hose failure.
  - July 19, 2017 – Spill Case No. 201703640 – One gallon of hydraulic oil released from a hose failure.
  - April 19, 2022 – Spill Case No. 202201544 – One gallon of hydrochloric acid released.
- MANFIESTs
  - In 2006, 330 gallons 250 pounds of D008-Lead liquid was generated from the property.
- NPDES
  - The property has a permit for stormwater industrial activities.

Based on the identified information, proximity to the Site, and presumed groundwater flow to the east-southeast, there is potential for this property to impact the surrounding area including Site soils and/or groundwater concerning PFAS.

5.1.2.17 O & G Industries, 260 Murphy Road, West-Northern Adjacent Parcel

The property is listed in the NY MANIFEST database however additional information is not provided in the listing.

Based on a lack of identified information, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.18 All Waste Incorporated, 143 Murphy Road, Approximately 403 Feet West-Northwest of the Site

The property is listed in the CT UST, CT LUST, CT SPILLS, CT MANIFEST, NJ MANIFEST, RCRA-SQG, CT SWF/LF, and CT ASBESTOS databases.

- UST
  - The property is currently using a 4,000-gallon sti-P3 diesel UST (A1) and a 10,000-gallon sti-P3 diesel UST (B2) installed May 01, 1991.
- LUST
  - A LUST was reported for a release of 2,000-gallons of diesel (Case No. 2009-02057) on April 23, 2009.
- SPILLS
  - April 23, 2009 – Spill No. 2009-02057 – Approximately 2,000 gallons of diesel fuel released from an overfill. LUST status states cleanup initiated, meaning CTDEEP has been notified of corrective actions.

  - September 3, 2010 – Spill No. 201005328 – Approximately 500 gallons of diesel fuel released.
  - May 26, 2012 – Spill No. 201202634 – Approximately 54 gallons of diesel released from an overfill.
- MANIFEST
  - Several manifests were observed generally from 2005 to 2007. The property generated around 40 gallons of combustible liquid (D001-Ignitable Waste) multiple times a year. Other generations included 500 to 1,290 gallons of leaded liquid in 2001. Multiple manifests were observed from 2016 to 2018 however additional information was not provided in the listing.
- ASBESTOS
  - Asbestos containing material (ACM) was reportedly removed from the property in 2015.
- RCRA-SQG
  - The property is listed with an EPA ID CTR000501619 as a small quantity generator of D001-Ignitable Waste, D018-Benzene, D039-Tetrachloroethylene, and D040-Trichloroethylene since at least 2007. A general violation for transporters was observed in 2001.
- SWF/LF
  - The property is listed for handling construction and demolition waste, municipal solid waste, and recyclables.

Based on the identified information, proximity to the Site, and presumed groundwater flow to the east-southeast, there is potential for this property to impact the surrounding area including Site soils and/or groundwater. Several large quantity spills diesel spills have occurred on the property and the UST currently in use is beyond the typical 30-year life expectancy.

5.1.2.19 Healthcare Waste Solutions, Inc., 117 Murphy Road, Approximately 405 Feet West of the Site

The property is listed in the RCRA-Non-Gen/NLR, CT MANIFEST, and CT NPDES databases.

- RCRA Non-Gen/NLR
  - The property is listed in the database with an EPA ID CTR4000506535 that no longer generates hazardous waste as of 2007.
- MANIFEST
  - The property previously generated 55-gallons of D001-Ignitable Waste in 2000.
- NPDES
  - The property has a stormwater industrial activity permit that expires in 2024.

Based on the identified information, proximity to the Site, and a lack of identified spills or remediation activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.20 Ryder Truck Rental, 99 Murphy Road, Approximately 406 Feet West of the Site

The property is listed in the RCRA-VSQG, CT MANIFEST, NY MANIFEST, NJ MANIFEST, FINDS, ECHO, CT CPCS, CT SPILLS, CT UST, CT LUST, and CT Voluntary Cleanup Program (VCP) databases.

- MANIFEST
    - A manifest from 1985 showed 150 gallons of D001-Ignitable waste had been generated from the property. Additional manifests were listed between 2016 and 2018 however, additional information was not provided in the listing.
- SDADB
    - The property is listed for hydrocarbon and/or fuel oil and non-chlorinated VOC wastes reported August 5, 1994.
- RCRA-VSQG
    - The property is listed with an EPA ID CTD162219646 as a conditionally exempt small quantity generator of F001 (spent nonhalogenated solvents), F002 (spent halogenated solvents), F003 (spent non halogenated solvents), F004 (spent nonhalogenated solvents), and F005 (spent nonhalogenated solvents) since at least 2003.
- FINDS
    - The property is listed under the RCRA and CT SIMS programs.
- ECHO
    - Enforcement or compliance violations were not found.
- UST
    - The property previously used multiple USTs, including several 10,000-gallon or 12,000-gallon USTs for motor fuels between the 1960s and 2019.
- LUST
    - A LUST was reported for a release of gasoline, diesel, and waste oil from UST(s) removal on September 1, 1989. Approximately nine cubic yards of impacted soil was removed from the property.
    - A LUST was reported for a release of waste oil on December 14, 1989.
    - A LUST was reported for a release of five gallons of diesel on June 13, 2018 from a spill bucket.
    - A LUST was reported for a release of motor oil on January 24, 2019 from a UST removal.
    - A LUST was reported for a release of gasoline and diesel on October 29, 2019 from a UST(s) removal.
- VCP
    - The property entered the VCP August 30, 2004 with Remediation ID 6383.
- SPILLS

- January 5, 2001 – Spill Case No. 200100165 – Approximately 30 gallons of diesel fuel released from an overfill.

Based on the identified information, and specifically the VCP and LUST information, proximity to the Site, and presumed groundwater flow to the east-southeast, there is potential for this property to impact the surrounding area including Site soils and/or groundwater.

5.1.2.22 Reliable Electric Motor Inc., 285 Murphy Road, Approximately 411 Feet West of the Site

The property is listed in the CT MANIFEST, NY MANIFEST, RCRA Non-Gen/MLR, FINDS, ECHO databases.

- MANIFESTS
  - Historic manifests show limited generation of 32-55-gallons of D001-Ignitable Wastes from the property. Five gallons of D006-Cadmium liquid waste was generated in 1999. Additional manifests were listed between 2013 and 2017 however, additional information was not provided in the listing.
- RCRA Non-Gen/NLR
  - The property is listed with an EPA ID CTD981893654 as a non-generated dated 1986. The property previously generated D000-Not Defined, D001-Ignitable Waste, and D002-Corrosive Waste.
- FINDS
  - The property is listed under the RCRA program.
- ECHO
  - Enforcement or compliance violations were not found.

Based on the identified information, proximity to the Site, and a lack of identified spills or remediation activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.2.23 Barrieau Moving & St./Barrieau Express Inc., 301 Murphy Road, Approximately 413 Feet West of the Site

The property is listed in the CT UST, RCRA Non-Gen/NLR, and CT MANIFEST databases.

- UST
  - The property historically utilized several 4,000-gallon gasoline USTs between the 1980s and mid-1990s.
- RCRA Non-Gen/NLR
  - The property is listed with an EPA ID CTD00182982 as a non-generated dated 2012. The property previously generated D001-Ignitable Waste as a conditionally exempt small quantity generator in 1986.
- MANIFEST
  - The property historically generated 20-70 gallons of F003 (spent nonhalogenated solvents) since 1997. 1,000 pounds of D001-Ignitable Waste paint material was generated in 2004.

Based on the identified information, proximity to the Site, and a lack of identified spills or remediation activities, environmental concerns associated with this property are not likely to impact Site soils and/or groundwater.

5.1.3 Orphan Site Summary

Due to discrepancies in the location of some facilities in the databases arising from incorrect or incomplete addresses, some facilities may be listed as un-mappable (i.e., Orphan Sites). Fifteen orphan site listings were reviewed by Tighe & Bond. EDR provides live links to additional limited information for some of the orphan sites listed in their report.

Two listings in the Orphan Summary identify the Site in the following databases:

- RGA LUST
    - Brainard Airport – Brainard Road
        - The Site is listed in the database for LUST incident(s) for the years 1996, 2002 through 2004, 2006, and 2008 through 2011.
- CPCS
    - Million Airways – 20 Lindbergh Drive Brainard Road
    - The Site is listed in the database due to a LUST. Comments include Jet-A fuel, transportation, and tank and soil removal. LUST status is complete meaning no significant environmental hazards remain and meets the EPA "LUST Cleanup" criteria.
- LUST
    - Million Airways – 20 Lindbergh Drive Brainard Road
        - The Site is listed for a LUST (Case No. 35409) for a release of Jet-A fuel (Spill No. 99-00654) on January 26, 1999. LUST status is complete meaning no significant environmental hazards remain and meets the EPA "LUST Cleanup" criteria.

5.2 Local File Review

Tighe & Bond contacted municipal offices in the City of Hartford to obtain records relevant to the Site via available online resources. Specifically, Tighe & Bond contacted or reviewed information from the Clerk's office, Assessor's Office, Health Department, Planning and Zoning Department/Licenses and Inspections, Water Department, Fire Marshal, and Engineering Department/Public Works. Information obtained from these sources is summarized in the following sections. Copies of pertinent municipal records are provided in Appendix B.

5.2.1 City Clerk's Office

Tighe & Bond review available information via the online land records database available through the City of Hartford on March 20, 2023. A Statutory Quit Claim Deed between the State of Connecticut and the CAA on June 20, 2013 recorded in volume 6703, page 260. An Acknowledgment Agreement between the CAA and CT Hangar Association was observed dated May 28, 2014 recorded in volume 6817 on page 154. A Clearance Easement Agreement between the City of Hartford and CAA was observed dated December 21, 2022 in volume 8055 on page 215. A Temporary Encroachment Permit

between the MDC and the CAA was observed dated January 20, 2023 recorded in book 8060 on page 45.

5.2.2 Tax Assessor's Office

Tighe & Bond reviewed the Tax Assessor online database for the City of Hartford which included access to the current property field cards. The current owner of the Site is the State of Connecticut Airport Division - Aeronautics as previously discussed in Section 2. The property field cards are included in Appendix B.

Tighe & Bond contacted the Hartford Assessor's Office on February 8, 2023 via email regarding historical property cards. Tighe & Bond followed up on March 1, 2023 with a second email to which personnel responded the same day with several files as follows.

- Building 1 (Administrative Office – 251 Maxim Road) – The first floor of the building was constructed in 1928 and the second floor was an addition in 1948. The building was reportedly heated by oil. Occupancy use states office and a basement.

- Building 2 (Maintenance Garage – 233 Maxim Road) – The single-story structure was used to store and repair trucks. The building was reportedly heated by oil with unfinished floors. The year of construction is not included on the card.

- Building 3 (FBO Hangar H3 – 58 Lindbergh Drive) – The single-story structure was constructed in 1920 with an addition in 1962. The building was reportedly heated by gas.

- Building 4 (FBO Hangar H2 – Lindbergh Drive) – The single-story structure was constructed in 1967 and used as an airplane hangar with a note of repair activities. The building was reportedly heated by gas.

- Building 5 (FBO Hangar H1 – 20 Lindbergh Drive) – The single-story structure was constructed in 1956. The building was used as a flight school and for airplane service. The building was reportedly heated by gas.

- Buildings 6, 7, and 8 (T-Hangers #4, 5 and 6) – The single-story structure was constructed in 1969. Each building has storage for up to 10 small planes. The building was reportedly not heated. The floor consisted of concrete and crushed rock.

- Building 9 (State Police/Urban Search and Rescue – 269 Maxim Road) – The two-story structure was constructed in sometime in the 1930s. The office was reportedly heated by steam and the hangar was unheated.

- A Site plan prepared by Hoyle, tanner & Associates, Inc. dated November of 1986 depicts up to 12 existing buildings. Eight proposed buildings are depicted (including four hangars, the FAA tower, and three additional structures). A small building northeast of Buildings 11 and 12 was slated for removal. A former fuel farm is depicted east/southeast of Building 12 (located southeast of H3) as well as a fuel hydrant south of Building 9 (H2).

5.2.3 Health and Human Services

Tighe & Bond contacted Health and Human Services on February 8, 2023 via email regarding pertinent information for the Site. Tighe & Bond followed up with a second email on March 1, 2023 to which personnel from the Health Department responded the same day to resubmit the inquiry using the online request portal for Hartford. On March 6, 2023, Tighe & Bond received a message through the request portal that no records were identified for the Site.

5.2.4 Planning and Zoning Department/Licenses and Inspections

Tighe & Bond contacted the Planning and Zoning Department on February 8, 2023 via email requesting pertinent information the Site. Personnel from the department responded on February 8, 2023 that scanned documents for the Site can be found online via Hartford GIS mapping. Only documents pertaining to the environmental quality of the Site are discussed below. According to multiple building permit records, there have been several additions to buildings, as well demolition of former structures, throughout the Site. Tighe & Bond also contacted the Licenses and Inspections Department via the online Freedom of Information Act (FOIA) request system on March 1, 2023. Tighe & Bond received a response on March 13, 2023 that files would be available via the online GIS mapping. All files provided by the department are included in Appendix B.

- December 5, 1927 – Heating Division Application – An application (No. 1800) was approved for the installation of a 5,000-gallon heating oil UST at the Pratt and Whitney aircraft building (former location unknown). The tank was reportedly six by twenty-four feet.

- April 24, 1929 – Certificate of Occupancy – A building certificate indicates that zone 6 constructed under permit 401-G was occupied by a repair shop. An included sketch shows a metal shop adjacent to an aircraft hangar used by Pratt & Whitney (former location unknown).

- June 22, 1936 – Correspondence Letter – A letter from the Office of Board of Health Commission granted the installation of a septic tank at Brainard Field for the Descomb Company, temporarily, and to be connected to the sewer system when completed.

- November 10, 1936 – Lighting Plan – The layout for field lighting shows former police pistol range was located somewhere on the southern portion of the property when the airport was originally configured.

- April 9, 1941 – Certificate of Occupancy – A building certificate indicates that a light industrial building at Brainard Field, South Meadows, West Side of Aviation Road was occupied by a one-story machine shop.

5.2.5 Fire Department

Tighe & Bond contacted the Hartford Fire Marshal on February 8, 2023 via the online record request. Tighe & Bond followed up with the Fire Marshal on February 27, 2023 and received the following documents:

UST Notifications:

- July 20, 1987 – UST Notification and Sketch – The state form indicates tanks F1, D1, W1, and R1 were currently in use. F1 reportedly held fuel oil, D1 reportedly held diesel fuel, W1 reportedly held waste oil, and R1 reportedly held unleaded gasoline. The tanks were installed between 1960 and 1977. The sketch shows F1 located east of Building 85-003 (Maintenance Shop – 239 maxim Road). R1 is located southwest of Building 85-003. D1 is located southwest of Building 85-002 (Maintenance Garage – 233 Maxim Road) and W1 is located southeast of Building 85-002.

- Date Illegible – UST Notification and Sketch – The state form indicates two fiberglass reinforced plastic tanks (U1 and D2) are located southwest of Building 85-003 (labeled Maintenance) adjacent to the next building. An oil/water separator is also located on the east side of Building 85-003.

- Date Illegible – UST Notification – The state form indicates tanks F1, D1, W1, and R1 had been removed in August of 1988. Tanks U1 and D2 were installed in August of 1988 and were currently in use. U1 reportedly held 4,000-gallons of unleaded gasoline. D2 reportedly held 4,000-gallons of diesel fuel.

- April 5, 1990 – UST Notification – The state form indicates tanks A1 through A10 had been removed. Each tank reportedly held aviation fuel and were removed in 1983.

- January 14, 2015 – A UST notification form indicates that tanks U1 and D2 were currently in use. Each UST was installed on August 8, 1988. Typical life expectancy for a fiberglass tank is 30 years.

Letter Correspondence:

- February 28, 1990 – Removal of Aviation Fuel Tanks – A correspondence between the Fire Marshal and ConnDOT indicated the intent to remove six 4,000-gallon and four 10,000-gallon USTs starting March 13, 1990.

Building Records:

- April 18, 1972 – A building inspection of 233 Maxim Road (occupied by ConnDOT, Bureau of Aeronautics Administrative Building) indicated the building was heated by oil. Chemicals were not observed to be stored.

- May 7, 1996 – A building inspection of 58 Lindbergh Drive (occupied by Million Air office and lounge) indicated the building was heated by gas. An inspection of the same address but of the service hangar and office indicated the building was also heated by gas. Approximately 250-gallons of cleaning fluids stored in drums and smaller containers was observed in the southeast corner of the hanger. Chemicals were noted to be stored on the hangar floor.

Tier II (Emergency and Hazardous Chemical Inventory) Reports:

- 2005, 2011/2012 – The following chemical description was provided for 233 Maxim Road. Safety Datasheets (SDS) were provided for each substance, as well as for sodium chloride salt and No. 2 fuel oil.

    - Diesel Fuel

  - Unleaded Gasoline

- 2014 – The following chemical description was provided for 1 Lindbergh Drive.
  - Sulfuric Acid

The following documents were reviewed from the Fire Marshal by TRC during the 2012 Phase I ESA but were not available for review at the time of this report.

- Four historic USTs were identified on the Site in 1967 including a 1,000-gallon, 2,000-gallon, and 3,000-gallon petroleum USTs associated with the Hartford Airmotive business. The tanks were replaced with four 10,000-gallon USTs at the Site. The Fire Marshal indicated that the old tanks were still in the ground with two of the four new tanks installed. A follow up visit indicated the old tanks were still in the ground and reportedly being used for auto fuel and used oil storage. The location of the tanks was not specified.

- Documents include existing USTs in 1982 associated with the CAA Maintenance Garage (233 Maim Road) and USTs associated with the State Police/Urban Search and Rescue (269 Maxim Road).

- A 1,000-gallon gasoline and 500-gallon used oil tank were also identified to be associated with the State Police/Urban Search and Rescue (269 Maxim Road). A sketch provided shows the location of the 1,000-gallon tank but not the 500-gallon tank.

5.2.6 Water Department (MDC)

Tighe & Bond contacted the MDC on March 1, 2023 via email requesting pertinent information for the Site. MDC personnel responded on March 2, 2023 with eight maps showing existing water lateral connections for the following address. Several of the maps reference existing soil conditions to be clay or a mixture of sand and clay.

- Maxim Road (General Cross Reference) – dated April 1968
- 233 Maxim Road (Servair Inc.) – dated October 5, 1960
- 251 Maxim Road (ConnDOT Aeronautics Office) – dated June 23, 1962
- Lindbergh Drive (General Cross Reference) – dated February 9, 1966
- Lindbergh Drive (General Cross Reference) – dated February 10, 1966
- Lindbergh Drive (Connair Inc.) – dated April 21, 1967
- Lindbergh Drive (Air One Inc.) – date October 25, 1984
- 500 Lindbergh Drive (Aviation School) – dated October 8, 2008

5.2.7 Public Works - Engineering

Tighe & Bond contacted the Engineering Department on March 1, 2023 via the online record request. Tighe & Bond also visited the department on March 2, 2023 and reviewed three maps dated October 1, 1984 that depict the Site parcel and general surrounding area structure features. Tighe & Bond received a response to the FOIA request on March 13, 2023 that files would be available via the online GIS mapping. Tighe & Bond also had a meeting with the Department of Public Works (DPW) on March

24, 2023. DPW provided the following report on March 27, 2023: "Hartford Flood Control System Toe Drain and Toe Ditch Repair Project Soil Sampling and Testing Program" prepared by GEI Consultants September 22, 2021. According to the report, five composite soil samples were collected along the Clark Dike and from a stockpile noted at Maxim Road. PCBs were detected at 2.5 mg/kg above RSR criteria in sample COMP 4 (southeastern Dike area). The metals cadmium and leachable cadmium and leachable lead were detected above apparent background concentrations in samples collected in sample COMP 4 (based on review of the data summary table). TPH was detected at 11,000 mg/kg above RSR criteria in sample COMP 4. SVOCs were detected above RSR criteria in samples COMP 3 and COMP 4. Pesticides were detected above RSR criteria in sample COMP 2. VOCs were detected below RSR criteria in sample COMP 4.

5.3 CTDEEP File Review

Tighe & Bond visited the CTDEEP Public File Room in Hartford, CT on February 16, 2023. Limited files were observed. Tighe & Bond emailed Joanna Burnham, Coordinator for Records Management at CTDEEP on February 16, 2023 regarding files that may be located off-site to be scanned as part of an ongoing effort to make records electronically available. Ms. Burnham, along with additional CTDEEP staff (Ryan Mowrey and Veronica Tanguay), responded the same day that files were found for nearby properties but not for the Site. Tighe & Bond also followed up with Claire Quinn, Supervisor of the North Central District at CTDEEP on March 1, 2023 to see if any additional information could be found for the Site. Ms. Quinn responded that the Remediation Division also did a file search on the Site last July in response to a citizen request but they did not find any additional information. Ms. Quinn provided the response letter to that inquiry for review. Tighe & Bond emailed the PCB Department as well on February 15, 2023 to which one spill report was provided. Tighe & Bond also reviewed records available through the online document portal. The following pertinent environment records were identified and provided in Appendix C.

<u>CTDEEP Document eSearch</u>

- Tank Removal Report
    - **March 26, 1999 – Statewide Underground Storage Tank Program, DPW Project No. BI-2B-760-B335, Brainard OMS-7A (Site A334), Hartford, Connecticut, Tank Removal Report, Gasoline, Diesel, and Heating-Oil USTs**

      A report prepared by Fuss & O'Neill Inc. documents the removal of one 2,000-gallon gasoline UST, one 3,000-gallon diesel UST, and one 5,000-gallon heating-oil UST at the Site. The USTs were removed from the State Police/Urban Search and Rescue (269 Maxim Road). Minor concentrations of TPH and lead were detected in the grave of the 2,000-gallon gasoline UST below current RSR criteria. TPH was detected in the grave of the 3,000-gallon diesel UST below current RSR criteria. TPH was detected in the grave of the 5,000-gallon heating oil UST above RSR criteria at the southern and western sidewalls. TPH was also detected above RSR criteria at the pipe trench of the 5,000-gallon UST after the excavation was backfilled. VOCs were detected in groundwater below RSR criteria in the area of the 5,000-gallon UST.

- Spills[6]
    - Refer to the table below for a list of spills reported at the Site.

Table 5.7 Spills - CTDEEP

Date	Spill No.	Release Quantity	Comments[7]
October 19, 1974	Not Reported	60 Gallons	Gasoline released during refueling of a tanker truck. The majority of the material is said to have evaporated.
December 12, 1975	Not Reported	Not Reported	A sheen was noticed on the Connecticut River after takeoff.
January 7, 1984	Not Reported	Not Reported	Five trailers stored at the end of the runway released liquified methane.
February 28, 1985	234	70 Gallons	Gasoline released when a hose fell off a truck during refueling.
June 7, 1985	772	50 Gallons	Aviation fuel was released during discharge/refueling.
February 14, 1986	169	20 Gallons	A puddle of fuel oil was observed on the pavement.
May 5, 1987	732	10 Gallons	Jet-A fuel released from a tank overfill.
December 5, 1987	2296	700 Gallons	Jet-A fuel released at the fuel farm when a valve became stuck while refueling a tanker truck. Soil was reportedly to be excavated from the area.
March 19, 1990	843	Not Reported	An emergency incident report states gasoline in soil was observed halfway down the access road toward the control tower. A DOT tank removal was noted in progress.
November 8, 1990	4336	5 Gallons	A release of carbon tetrachloride was identified by a night shift firefighter from a container in the corner of the hangar.
August 31, 1993	93-4649	< 1 Gallon	Jet-A fuel was released from a plane crash on August 30, 1993 at 251 Maxim Road.
December 10, 1996	95-06474	300 Gallons	Jet-A fuel released from an overfill.
October 18, 1997	97-	10 Gallons	

[6] Incorrect spelling of the Site addresses was noted in numerous files but mostly for Lindbergh Drive.
[7] Unless otherwise noted, the location of identified releases could not be readily determined based on the information in the spill record.

Date	Spill No.	Release Quantity	Comments[7]
	05999		
November 30, 1997	97-06943	25 Gallons	AvGas 100LL was released from a plane crash at 251 Maxim Road.
December 18, 1997	97-07317	15 Gallons	Jet-A fuel released from an overfill.
July 25, 1998	98-04815	12 Gallons	While attempting to fuel an aircraft, a driveshaft broke striking the gas tank at 20 Lindbergh Drive (occupied by Million Air). Approximately 15-gallons of AvGas 100LL released onto the pavement.
September 17, 1998	98-06296	15 Gallons	No. 2 fuel oil released from a UST pipe while being removed from the ground. Soil was slated to be excavated from around the State Police/Urban Search and Rescue (269 Maxim Road).
January 26, 1999	99-00654	20 Gallons	Aviation fuel released during a tank removal. Soil was reportedly excavated and groundwater impacts were observed from a UST located at 20 Lindbergh Drive (Million Airways).
February 9, 2000	2000-00789	10 Gallons	Aviation fuel released from a minor plane crash. Two planes hit on the runway causing a tank to rupture.
July 27, 2000	2000-05525	50 Gallons	Aviation fuel released to a catch basin due to an interior discharge at 20 Lindbergh Drive (Million Air Aviation).
April 2, 2001	2001-02021	5 Gallons	Jet-A fuel released from an overfill.
March 19, 2002	2002-01693	Not Reported	Chrysotile asbestos was reported in the armory building.
March 8, 2003	2003-02042	Not Reported	A large oil spill was reported by an airplane just east of the airport.
June 2, 2004	2004-03613	Not Reported	An oily substance about a half mile long was reported by an airplane.
April 21, 2005	2005-2334	300 Gallons	A release occurred approximately eight feet by 30 feet east of the fuel truck parking area. Soil was excavated with confirmatory sampling via Petroflag analysis. Approximately 51.38 tons of impacted soil was removed and taken for Phoenix Soils, LLC in Waterbury, CT.
November 22,	2005-	1 Gallon	Transformer oil released on Lindbergh

Date	Spill No.	Release Quantity	Comments[7]
2005	07982		Drive.
March 9, 2007	2007-01412	4 Gallons	Transformer oil released to the road surface recorded at 58 Lindbergh Drive.
October 28, 2008	2008-06872	Not Reported	An oil sheen was spotted on the Connecticut River.
December 12, 2008	2008-07815	3 Gallons	Propylene glycol and waste oil released on 251 Maxim Road from a barrel overflow onto the parking lot.
June 30, 2012	2012-03426	17 Gallons	Hydraulic fluid released at 251 Maxim Road on the flood control dike from a hose failure.
June 2, 2014	2014-02052	< 1 Gallon	Jet fuel released at Building 85 at 20 Lindbergh Drive from a mechanical failure.

- Manifests
    - Refer to the Table 5.8 below for a list of manifests reported at the Site.

Table 5.8 Manifests - CTDEEP

Manifest ID	Generation Date	Quantity	Substance	Disposal Facility
CTC0167379	September 26, 1988	200 Gallons	Flammable Liquid (D001-Ignitable Waste)	United Oil Recovery Inc. Meriden, CT.
RIG0008880	August 1, 1990	20 Gallons		Chem-Pak Corporation Cranston, RI.
RIG0009433	August 30, 1990	10 Gallons	Combustible Liquid (D001-Ignitable Waste)	
RIG0009971	September 16, 1990	20 Gallons		
RIG0019709	January 15, 1992	16 Gallons	Combustible Liquid (D001-Ignitable Waste)	Chem-Pak Corporation Cranston, RI.
RIG0020399	February 12, 1992	16 Gallons	Flammable Liquid (D001-Ignitable) Waste)	
RIG0021866	April 8, 1992	14 Gallons		

Manifest ID	Generation Date	Quantity	Substance	Disposal Facility
CTF0117818	January 13, 1993	25 Gallons	Combustible Liquid (D001-Ignitable Waste)	Safety-Kleen Corp West Hartford, CT.
CTF0245107	January 20, 1994	140 Pounds	Mercury	East Coast Environmental Service Corporation New Haven, CT.
		139 Ballasts	PCB-Containing	
RIG0050062	April 5, 1994	18 Gallons	Flammable Liquid (D001-Ignitable Waste)	Chem-Pak Corporation Cranston, RI.
RIG0065178	February 20, 1995	16 Gallons		
CTF0654165	August 25, 1997	111 Gallons	Waste Paint Related Material (D001-Ignitable Waste)	United Oil Recovery Inc. in Meriden, CT
		70 Gallons	State Regulated Waste (Driveway Sealer and Grease)	
CTF0766023	January 26, 1999	1,005 Gallons	Flammable Liquid (D001-Ignitable Waste)	

CTDEEP File Review – Remediation Division

Limited UST information was available from the Public File Room.

- **April 5, 1990 – UST Notification and Sketch**

  The state form indicates tanks A-1 through A-10 holding aviation fuel were removed in 1983. A Site plan prepared by ConnDOT, dated October 4, 1989, and labeled "Removal of Aviation Fuel Tanks at Hartford Brainard Airport" shows a general location of each of the USTs.

- **October 8, 2003 – Tank Tightness Testing**

  Pennoni Associates performed testing on two fiberglass tanks (tank IDs not provided) holding regular and diesel fuel of which both tanks passed.

- **July 28, 2022 – Correspondence Letter to Citizen Compliant**

  CTDEEP received a compliant on April 28, 2022 about soil, groundwater, and surface contamination at Brainard Airport. CTDEEP reviewed 28 documented releases of petroleum products having occurred at the Site from 1996 to 2007. Incident volumes to the ground surface ranged from one to 300 gallons in volume of which corrective measures were implemented for each release. CTDEEP

indicated they are aware of known sources of pollution in soil at one or more properties near the Site, three of which are immediately adjacent to the western border of the Site. These three areas contain arsenic and PCB concentrations in soil that is covered by an engineered control.

CTDEEP File Review – PCB Program

One spill incident was provided as follows:

- **July 6, 2012 – Spill**
  A release of eight gallons of transformer oil from a pole-mounted unit occurred from pole 9092 at 20 Lindbergh Drive. Laboratory analysis showed the oil was non-detect for PCBs. Clean Harbors responded and cleaned the release area.

5.4 Connecticut Airport Authority (CAA)

CAA provided several documents to Tighe & Bond for review. Documents determined to have environmental relevance to the Site are discussed below.

- **LUST Lookup via CTDEEP Databases**
  - **March 19, 1990 – 233 Maxim Road**

    A LUST is reported associated with Spill Case No. 2008-07815. The Facility ID is No. 28344. Correspondence for the listing states a 1,000-gallon diesel UST failed a tightness test August 1, 1988. The tank was 31 years old and reportedly pumped out (Spill Case No. 88-3422). According to the LUST master list, one 10,000-gallon and one 4,000-gallon diesel fuel USTs and contaminated soil were removed from the subject facility on October 25, 1988. Spill Case No. 90-843 states that gasoline was detected in soil half-way down the access road toward the control tower. A LUST was removed as a result of the release on March 19, 1990. Spill Case No. 92-3801 states a 2,000-gallon diesel and a 2,000-gallon No. 2 fuel oil LUST were removed. Four 10,000-gallon USTs and six 4,000-gallon USTS (A2-A10) and contaminated soil were removed from the Site on March 19, 1990. A correspondence letter from CAA to CTDEEP arranges for the disposal of 1,700 cubic yards of contaminated soil currently stockpiled at the Site.

    Spill Case No 93-7162 states that a 1,500-gallon (JP-4) UST and 10-20 cubic yards of contaminated soil were removed. Further excavation of the tank grave was noted as necessary.

  - **July 28, 1992 – Brainard Airport**

    A LUST is reported associated with Spill Case No. 92-3801 for a release associated with a 2,000-gallon diesel and 2,000-gallon No. 2 fuel oil USTs. LUST status is cleanup initiated. A correspondence dated September 11, 1992 from CTDEEP states USTs and contaminated soil were removed from the Site. Groundwater analytical samples were collected but not included for reference. The Facility ID is identified as No. 31633.

  - **September 14, 1998 – National Guard**

    A LUST is reported at the State Police/Urban Search & Rescue (269 Maxim Road) for a heating oil UST. The Spill Case No. was not identified. LUST status is pending, meaning a release is suspected but confirmed at the time of entry. A correspondence of a tank closure assessment report was

recorded on April 7, 1999 by Fuss & O'Neill for the removal of a 2,000-gallon gasoline, a 3,000-gallon diesel, and a 5,000-gallon heating oil USTs. Impacts were not identified in soils below the diesel and gasoline tanks. Impacted soils were excavated from below the heating oil UST. Confirmation soil samples showed constituents of concern (COC) above RSR criteria. The Facility ID is identified as No. 49370.

- **January 26, 1999 – Million Airways**

  A LUST is recorded at 20 Lindbergh Drive for a release of Jet-A fuel. The UST and soil were removed from the area. The release is associated with Spill Case No. 99-00654. LUST status is complete, meaning no significant environmental hazards remain at the Site and meet the EPA "LUST Cleanup" criteria. The Facility ID is identified as No. 35409.

- **UST Notification Forms**
  - **May 5, 1986 – Maintenance Shop No. 7**

    The state notification form indicates that USTs A1 (2,500-gallon gasoline) and B2 (2,000 gasoline) were in use associated with the State Police/Urban Search & Rescue (269 Maxim Road).

  - **October 17, 1986 – Maintenance Shop No. 7**

    The state notification form indicates that UST 1 (2,000-gallon gasoline) and 2 (1,000-gallon diesel) were in use associated with the State Police/Urban Search & Rescue (269 Maxim Road) building. This form appears to have been submitted as a correction to the aforementioned, May 5, 1986 notification.

  - **November 22, 1989 – Parcel F (Character Oak Aviation/Previous Corporate Air Inc.)**

    The state notification form indicates that UST A1 (10,000-gallon AvGas 100LL) was removed from the ground.

  - **December 23, 1992 – National Guard (current State Police/Urban Search & Rescue)**

    The state notification form indicates that USTs A1 (5,000-gallon heating oil) and C2 (1,000-gallon diesel) had been removed while A1R1 (5,000-gallon heating oil), B1 (2,000-gallon gasoline), and C2R1 (3,000-gallon diesel) USTs were in use. UST D1 (1,500-gallon diesel) was reportedly abandoned in place. The attached sketch depicts the eastern side of the State Police/Urban Search and Rescue with a 5,000-gallon fuel tank adjacent to the building, a 3,000-gallon diesel and a 2,000-gallon gasoline tank in the gravel parking area, and another tank listed as existing fuel tank (removed) from the northwest corner of the parking area.

  - **September 6, 1997 – Brainard Maintenance**

    The state notification form indicates the following USTs were removed from the Site:

    - F1 (2,000-gallon No. 2 fuel oil)
    - D1 (2,000-gallon diesel)
    - W1 (250-gallon waste oil)

- R1 (2,000-gallon gasoline)

USTs U1 (4,000-gallon gasoline), and D2 (4,000-gallon diesel) were in use. The provided sketch depicts F1 north of the CAA Maintenance Shop (239 Maxim Road), and D1 south, W1 southeast, and R1 north of CAA Maintenance Shop (233 Maxim Road).

- **March 15, 1998 – National Guard (current State Police/Urban Search & Rescue)**

  The state notification form indicates a tank (A) was installed approximately in 1955 with a capacity of 5,000-gallons for No. 2 fuel oil. The provided sketch depicts the tank on the northeastern corner of the building.

- **January 29, 1999 – National Guard (current State Police/Urban Search & Rescue)**

  The state notification form and a correspondence letter indicate that USTs A1R1, B1, and C2R1 were removed in September of 1998. USTs B1 and C2R1 were replaced with a 4,000-gallon AST to dispense diesel fuel. UST A1R1 was removed and replaced by natural gas fuel.

- **September 6, 2006 – National Guard (current State Police/Urban Search & Rescue)**

  The state notification form indicates that USTs A1 (2,500-gallon gasoline) and B2 (2,000-gallon diesel) USTs were removed and last used in 1989 and 1994, respectively.

- **September 6, 2006 – CAA Maintenance Shop**

  The state notification form indicates two USTs labeled U1 and D2 are associated with the CAA Maintenance Shop (239 Maxim Road). The tanks were located just north of CAA Maintenance Garage (233 Maxim Road) followed by two fuel dispensers. An oil/water separator was also depicted west of the CAA Maintenance Shop.

- **Site Plan, June 1985 (revised June 1988 and December 1990)**

  A historical Site plan depicts the property with five fuel storage areas previously discussed in this report. Fire gates were identified along with several tenants of the buildings at the time.

- **Manifest: CTA0074993, July 17, 1985**

  2,500 gallons of waste oil combustible liquid (D001-Ignitable Waste) was disposed of at United Oil Recovery in Meriden, CT as previously discussed. The description indicates the material was waste fuel from a tank cleaning.

- **EPA Notification of Hazardous Waste Activity, October 11, 1989**

  The federal form was completed by Air One Inc., located at Brainard Airport with EPA ID No. CTD108956616. The form states Air One generates less than 100 kilograms per month.

- **Tank Removal Notification, November 27, 1989**

  A 10,000-gallon UST (A1) that was located at "Parcel F" at the airport was removed. One soil sample showed constituents were below detection. A provided sketch shows the location of the tank south of the former DOT office (since

demolished), and north of the Air One (FBO) Fuel Farm. A passing tank tightness test was also observed for a tank listed for Corporate Air that had a capacity of 8,020 gallons. A provided sketch shows the 8,020-gallon on the northside of a hangar adjacent to a 4,000-gallon tank labeled "dead tank" to the east, followed by a dispenser. The UST sketch is believed to be associated with H2.

- **National Pollutant Discharge Elimination System Report – Part 1, Group Application, March 14, 1991**

  The following is a list of materials known to be stored outside at the Site at the time of the NPDES report:

  - Fuel Farms:
    - (4) 6,000-gallon steel Jet-A fuel USTs installed in 1985
    - (2) 6,000-gallon steel AvGas 100LL USTs installed in 1985
    - (1) 4,000-gallon steel diesel UST installed in 1988
    - (1) 4,000-gallon steel gasoline UST installed in 1988
    - (1) 12,000-gallon steel Jet-A AST installed in 1989
    - (1) steel AvGas 100LL installed in 1989 (capacity not listed)
  - Waste Oil:
    - (1) 275-gallon located at Air One (H1)
    - (1) 275-gallon located at Charter Oak (likely H3 and/or H4)
  - Ethylene Glycol:
    - 100-gallon storage and 50-gallon applicator at both Air One (H1) and Charter Oak (likely H3 and/or H4) (the material is stored inside, but applied outside)

- **Stormwater Pollution Prevention Plan for Brainard General Aviation Airport, Metcalf & Eddy, Inc., November 17, 1995**

  The report indicated there are four storm water point discharges at the Site (Discharge A through D). Discharge A receives runoff from the major portions of the runways, hangars west of runway 2-20, and the Million Air, Inc. hangars that discharges to the Connecticut River. Discharge B also discharges directly to the Connecticut River, but airport buildings are not associated with this drainage location. Discharge C is connected to the MDC storm sewer system at the south-western end of the Site and includes discharges from the western end of runway 11-29, taxiways, infield areas, various Site buildings, the T-hangars, and from the control tower. Discharge D is also connected to the MDC sewage system at the northwestern end of the Site and includes discharges from the CAA office buildings, State Police/Urban Search and Rescue, and other nearby buildings.

  Significant material storage was observed via 55-gallon drums delivered to the various Site tenants, subsequently unloaded outside the tenant facilities and then stored within the hangars. On-site drummed materials are generally moved with hand trucks. Fuels are delivered by tank trucks and transferred through dispensers located near the USTs. Aircraft fuel is taken from the USTs and delivered via tanker trucks. Known hazardous wastes were not previously identified at the Site however, waste oil is a common Connecticut regulated

waste (CR02) identified with the individual tenants. Pesticides, fertilizers, and herbicides were not knowingly used at the Site.

The building at 239 Maxim Road, identified as the ConnDOT Fire facility (current CAA Maintenance Shop), includes an office and vehicle garage. Fire equipment is kept inside most of the time. Two 4,000-gallon USTs containing diesel and gasoline are located outside the CAA Maintenance Garage at 233 Maxim Road. Waste oil, mineral spirts, and paint were located within the Maintenance facility in 55-gallon drums. Two floor drains exist in the firefighting facility. One drain is located in Maintenance facility. These drains with sumps were installed in 1995 and are connected to the oil/water separator to the sanitary sewer.

The State Police/Urban Search and Rescue (269 Maxim Road) was observed to include various waste oil and vehicle fuel tanks in the large gravel parking area located to the east. The facility contained storage of waste oil and dirty rages in 55-gallon drums within the building. Some additional storage is included within the fenced gravel area as well as a 275-gallon waste oil AST and an abandoned waste oil AST. Two USTs containing gasoline and diesel are located within the gravel storage area with associated dispensers. Two large storage sheds were also used to store vehicle oil. A 5,000-gallon heating oil UST was located just outside the main structure. A vehicle washing area is included in the gravel storage area where wash water is collected and discharged through a 1,500-gallon oil water separator to the sanitary sewer or holding tank.

Million Air, Inc. (H1) was the Fixed Based Operator (FBO) for Brainard at the time and operated two fuel farm facilities and mobile fuel trucks. The first fuel farm consists of two 12,000-gallon ASTs located in the northwestern portion of the Site containing Jet-A and AvGas 100LL. A second fuel farm contains six 6,000-gallon USTs located just south of the AST fuel farm. Approximately 1,000,000-gallons of aircraft fuel is consumed annually from the Site. Million Air South (H3 and H4) include aircraft maintenance areas (oil changes, minor painting). Waste oil, detergents, and ethylene glycol were observed to be stored. Aircraft washing happens both within and outside the hangars. The new fuel farm area consists of ASTs with 110 percent secondary containment. Releases in this area are directed to a catch basin back into the containment area. Aircraft deicing is performed by Million Air within the hangars with about 20-50-gallons of deicing used yearly. A 275-gallon waste oil tank was observed to be located outside the building (north of H1).

- **Master Plan Technical Report, Hartford-Brainard Airport, Hartford, Connecticut, The Louis Berger Group, Inc., July 1999**

  The Site includes an Airport Rescue and Fire Fighting (ARFF) operation that operates out of the CAA Maintenance Shop (239 Maxim Road). ARFF vehicles include a 1991 Ford Rapid Intervention Vehicle equipped with a 500-lb dry chemical system, and a 1977 Chevrolet Quick Response Vehicle. Fuel storage was also documented and included two 12,000-gallon Jet-A and AvGas 100LL ASTs operated by Million Air and located north of fuel storage 1 and west of the guard ramp. Two 4,000-gallon diesel and gasoline USTs operated by CAA are located west of the State Police/Urban Search and Rescue (269 Maxim Road). A 3,000-gallon diesel and a 2,000-gallon gasoline UST operated by the former National Guard are located north of the sand shed. A provided sketch depicts the location of each fuel storage area, including the existence of former USTs or ASTs north of H1.

- **Draft 2001 Master Transportation Plan, 2022-2011, ConnDOT, 2001**

The Site is classified as a reliever airport for Bradley International Airport but is also utilized for general aviation and military operations. The pavement used on the Site is an FAA approved mix which is close to but not the same as ConnDOT's class 1 pavement mix. The structural life for the constructed pavement is 20 years. The T-Hangars were reportedly rehabilitated in 1998. Environmental concerns potentially affecting the Site functionality include the presence of trees penetrating the Federal Aviation Regulations (FAR) Part 77 imaginary flight surfaces. The trees are located in a flood plan and will likely require permits from CTDEEP and the Army Corps of Engineers and location coordination. Another concern is to expand the runway safety areas which would require land rights from the MDC.

- **Vegetation Management Plan (VMP), ENSR Corporation, January 2004**

  Intended chemical (herbicide) control methods included the application to fully developed leaves, stems, needles, or blades of a plant. The herbicide is mixed or diluted with water as a uniform spray, applied from early June through early Fall. Low volume foliage techniques include hand-operated pumps or motorized backpack sprayers with herbicide concentrations of 3-20%. Anti-drift agents are added to the mix or solution to reduce potential migration from the target vegetation. Surfactants and emulsifiers are added to the mix or solution to increase herbicide efficacy. Cut stump techniques include application of an herbicide to the cut stump using a 50% herbicide concentration. Equipment that requires refueling may only be refueled using a "closed system" in wetlands. Small equipment may be refueled with jugs set up in plastic tubs with soak up pads.

- **General Permit for Contaminated Soil and/or Sediment Management (Staging and Transfer), CTDEEP, December 18, 2008**

  The letter states that the application for a registration to transfer and temporarily stage contaminated soil at an off-site location in volumes less than 10,000-cubic yards was received and processed. The off-site location is Brainard Road Ramp over Route 5/15, Bristol, CT. Additional information was not provided.

- **Stormwater Pollution Prevention Plan, McFarland Johnson, December 2018**

  An Information for Planning and Conservation (IPaC) online screening tool was referenced on January 11, 2018 to obtain information on potential endangered species. IPaC identified 26 migratory bird species, including the bald eagle, with distributional ranges that include the Site.

  A majority of the stormwater runoff at the Site is listed as impaired water in the CT 2016 303(d) List. The Site discharges stormwater to a portion of the Connecticut River listed as impaired for "fish consumption" by PCBs and for recreation by E. Coli. PCBs may be due to industrial discharges, municipal discharges, landfills, illegal dumping, remediation sites, and groundwater impacts. E. Coli impairment may be sourced from illegal discharges, combined sewer overflows, insufficient on-site/treatment septic systems, or agricultural activities.

  The CAA ARFF floor drain discharges to the sanitary sewer as authorized by a CT General Permit for the Discharge of Vehicle Maintenance Wastewater (Permit ID #GVM000042) and a general permit (Permit ID #075-0308-GPEE). Floor drains are located in most conventional hangars and CAA buildings. Floor drains discharge to oil/water separators and the sanitary sewer.

The report includes an inventory of exposed and potentially exposed materials, including the location of the material, associated outfall area and potential exposure pathway as Table 3. Deicing material application areas is listed as not applicable. A table of potential pollutants is included as Table 4 listing the industrial activity, pollutant source, and potential pollutants. A list of spills and leaks of five gallons or more of petroleum products or hazardous substances is also included. See Appendix C for Tables and list of spills associated with this Stormwater Pollution Prevention Plan.

Best management practices include inspecting catch basins and removing sediment when 60% of the sump is filled or sediment is within 6" of the bottom outlet pipe. Oil/water separators should be inspected for spills or leaks and cleaned according to manufacturer's recommendations or when sludge accumulates to 20% of the distance between the separator base and static liquid level. Outfalls should be inspected for debris.

CAA owns the one fuel farm and associated pumps located southeast of the CAA ARFF facility. The Hartford Jet Center (FBO) leases the tanks and provides fuel services to the Site. Table 5 included in the report (Appendix C) lists the follow potential pollutants from tanks as below.

Tank	Size (gallons)	Substance	Location	Operator
AST	12,000	Jet-A	Fuel Farm (northwest of H1)	FBO
	12,000	AvGas 100LL		
Mobile Fuel Trucks	2,200 & 2,600	Jet-A	Fuel Truck Parking Area (east of H1)	FBO
	(2) 1,000	AvGas 100LL		
UST	4,000	Gasoline	CAA Maintenance Garage (north of 233 Maxim Road)	CAA
		Diesel		
	5,000	Heating Oil	Firehouse Building	
Generator	250	Diesel	CT Aero Tech School	
AST	275	Waste Oil	East of 269 Maxim Road (State Police/Former National Guard)	State Police/Former National Guard
Generator	300	Diesel	West of CAA ARFF Building (4 Maxim Road)	CAA
UST	6,000	Gasoline	Maintenance Garage	CAA

Runway deicing activities are conducted with the use of FAA approved sand and sodium formate/acetate as necessary. Deicing operations of aircrafts takes place on the FBO ramp and can include glycol compounds. Deicing fluid runoff is captured by a closed stormwater drainage system and discharged to the MDC combined sewer/stormwater system.

The most recent round of water quality sampling conducted for the Airport was completed on June 4, 2008 of the outfalls from Drainage Areas A and B that discharge to the Connecticut River. Benchmarks were not exceeded after sampling and therefore subsequent sampling was not performed. Oil and grease were not detected in either sample.

- **Tier II (Emergency and Hazardous Chemical Inventory) Report**

  2022 – The following reportable chemicals are listed at the Site.

  - Batteries, Wet, Filled With Acid
  - Diesel Fuel
  - Petroleum Distillates
  - Unleaded Gasoline

5.5 US Army Corps of Engineers

Tighe & Bond contacted the US Army Corps of Engineers at Huntsville Center (CEHNC) on March 2, 2023 via email regarding the former military use of the Site and as to why the Site is included in the EDR UXO database. Tighe & Bond received a response on March 9, 2023 that processing can take up to 30 days after providing a willingness to pay for the file review. To date, Tighe & Bond has not received a response with potential files. An addendum will be submitted if environmentally relevant information is provided to Tighe & Bond.

5.6 Connecticut Historical Society

Tighe & Bond contacted the Connecticut Historical Society on March 7, 2023 regarding historical information at the Site and submitted a research request. To date, Tighe & Bond has not received a response with potential files. An addendum will be submitted if environmentally relevant information is provided to Tighe & Bond. Ten aerial photographs were publicly available online. Photographs of environmental significance are described below.

- A photograph of Charles Lindbergh with the plane "Spirt of St. Louis" is depicted on the Site from July 20, 1927 after completing the world-famous transatlantic flight.
- A former hangar is depicted with Hartford painted on the roof. Two small structures are located adjacent to the hangar. The picture is undated; however, the photograph appears to be from the 1930s.
- Several hangars with adjacent structures are depicted along the northern portion of the property. The hangar with Hartford painted on the roof is located adjacent to the Connecticut River. The CAA Administrative Building is visible west of the structures. The picture is labeled NCCNG Building and appears to be undated, however the photograph is likely from the 1930s.
- An aerial photograph shows the northern portion of the Site and adjacent northern property as an open field. The current power plant has not been

constructed yet. The photograph appears to show at least nine or ten large structures on the Site. The CAA Administrative Building is visible between the former structures. The picture is undated; however, the photograph appears to be from the 1930s.

- An aerial photograph shows the original orientation of the four runways at the Site. The southern adjacent parcel appears to be developed with initial wastewater treatment structures. The picture is undated; however, the photograph appears to be from the 1930s.
- A photograph from March 20, 1936 shows the northern portion of the Site, as well as the adjacent northern property catastrophically flooded. The rooftops of several buildings are still visible on the property placing the water level at approximately 12 feet above ground.
- An aerial photograph shows the Site with the National Guard Hangar (State Police/Urban Search & Rescue) being built adjacent to the Connecticut River. Two larger hangars or aircraft support buildings are visible west of the National Guard Hangar. The former runway areas were significantly larger expanding the airport further west. The surrounding property is undeveloped except for the southern adjacent property with apparent wastewater structures.
- A photograph from October 20, 1939 shows the completed National Guard Hangar (current State Police/Urban Search & Rescue).

5.7 Physical Setting

5.7.1 Topography and Groundwater Flow

According to Connecticut Environmental Conditions Online (CTECO), the surface elevation of the Site is approximately 13 to 16 feet above the National Geodetic Vertical Datum (NGVD). Topography across the Site is generally flat sloping gently to the east toward the man-made Clark Dike, which is along the eastern Site property boundary. The elevation of the Dike is reported to be 32 feet above the NGVD. Regional topography around the Site is similarly flat and developed with buildings, roads, and associated paved surfaces (i.e., parking). Based on this information, and historical groundwater data reviewed for the Site, overburden groundwater flow on Site is likely to southeast and southwest toward the Connecticut River that flows east and south of the Site. The Connecticut River is considered tidal up to approximately Windsor Locks, CT and therefore, groundwater on the Site is subject to regional ebb and flow. Previous reports have indicated that groundwater on the Site exists at depths of 4.5 to 7 ftbgs.

5.7.2 Soil Information

According to the National Resources Conservation Service (NRCS) Web Soil Survey (WSS) for the State of Connecticut (NRCS Webpage, 2009), soil on the eastern portion of the Site is mapped as Winooski silt loam. The remainder of the Site is mapped as Urban Land. A soils map of the Site is provided as Figure 4.

According to MDC records, soil in the area is described as sand and clay.

5.7.3 Geology

According to the Surficial Materials Map of Connecticut (U.S. Geological Survey, 1992), the Site is underlain by alluvium overlying fines. Alluvium is characterized as a floodplain material of which areas along large river systems, like the Connecticut River, can be

upwards of 25 feet thick. Previous investigations indicate that subsurface soils consist of reddish-brown sand, gravel, and silt overlying greyish-brown/reddish-brown clay. Portions of the Site may also contain urban fill or dumped materials due to the historical industry in the area. A surficial materials map of the Site is provided as Figure 5.

According to the Bedrock Geologic Map of Connecticut (U.S. Geological Survey, 1985), the Site is underlain by the Portland Arkose (JP) formation. The formation is characteristically reddish-brown arkose, also known as sandstone. Based on previous investigations, bedrock was not encountered in the top 20 feet of soil. A bedrock geology map of the Site is provided as Figure 5.

5.7.4 Groundwater and Surface Water Quality

Groundwater at the Site is classified by the CTDEEP Bureau Water Protection and Land Reuse as "GB". GB classified groundwaters are groundwater resources that are presumed to be degraded and not suitable for human consumption. A water classification map of the Site is provided as Figure 7.

The closest surface water body is the Connecticut River, that generally flows along the east/south property boundary on the opposite side of the Clark Dike. An unnamed pond is also approximately 400 feet north of the Site at 300 Maxim Road. The Connecticut River is classified by CTDEEP as Class "SB". CTDEEP indicates that Class SB designated uses are habitat for marine fish, aquatic life, and wildlife, commercial shellfish harvesting, recreation, industrial water supply, and navigation.

According to a Pollutant Loading Report observed through EDR, the Connecticut River is listed as impaired due to the presence of pathogens and PCBs.

5.7.5 Flood Plain, Wetlands, Aquifer Protection Area, and Natural Diversity Information

A review of the Federal Emergency Management Agency (FEMA) Flood Insurance Map of the area indicates the Site is located in an area with a reduced flood risk due to a levee along the east property boundary (Clark Dike). The Connecticut River located on the other side of the Clark Dike is a special flood hazard area.

The northern, eastern, and southern portions of the Site are located within a CTDEEP Natural Diversity Database Area (NDDB). NDDB maps represent approximate locations of endangered, threatened, and special concern species and significant natural communities in Connecticut. On the day of the Site reconnaissance discussed in Section 6, a bald eagle was spotted while touring the Clark Dike.

According to the National Wetland Inventory, wetlands are not located on the Site. The closest mapped wetlands are a freshwater forested/shrub wetland located east of the Clark Dike. During the Site reconnaissance, a small detention area with phragmites was observed northwest of the engine test cell building associated with the CT Aero Tech School.

According to the CTDEEP GIS data, the Site is not located within an Aquifer Protection Area (APA).

Flood Plains, Wetlands, Aquifer Protection areas, and Natural Diversity areas are provided as Figure 6 (Environmental Resources Map).

5.7.6 Environmental Justice Areas

According to the 2022 Connecticut Department of Economic and Community Development (CTDECD) Distressed Municipality list, the City of Hartford is listed as the number 5th distressed municipality in Connecticut. Therefore, the Site is located within an Environmental Justice area. Environmental Justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, English language proficiency, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

5.8 Historic Use Information

The objective of consulting historical sources is to develop a history of the previous uses of the site to help identify the likelihood of past uses having led to RECs and AOCs in connection with the Site back to 1939 or first developed use. Tighe & Bond reviewed various historical information sources and conducted interviews as described in this report. Typical historical sources include Sanborn Fire Insurance Maps, city directories, aerial photographs, topographic and other maps, and municipal records.

5.8.1 City Directories

Historical city directories of the site and surrounding areas were searched by EDR. Below is a summary of the Site and surrounding properties. City directories are included in Appendix G.

City Directories		
Year	**Site**	**Surrounding Properties[8]**
1936	Not listed	Not Listed

5.8.2 Aerial Photographs

Historical aerial photographs of the Site and surrounding areas were searched by EDR. Below is a summary of the available imagery and Tighe & Bond's observations for the Site and surrounding properties. Aerial photographs are included in Appendix G.

Aerial Photographs		
Year	**Site**	**Surrounding Properties**
1934	The Site is shown as an open field with at least 11 structures/hangars along the northern property boundary. At least three of the buildings at the western, northern, and eastern property limits appear to be partially outside the current property boundary.	The area surrounding the Site is predominately undeveloped consisted of open fields and various access roads. The Connecticut River is viewable east of the Site.
1941	The Site is shown with several runways in a triangular orientation. The same structures are visible as previously shown in the 1934 aerial. Several structures in the northeastern portion of the Site have been razed and replaced with what appears to be the current building at 269 Maxim Road. The buildings at 233, 239, and 251 Maxim Road also appear to be visible west of 269. The lower portion of the Site is not visible in the photograph.	Additional roadways and limited structures are visible surrounding the Site.
1943	The two former structures observed on the eastern side of the property have been razed and the area appears to be utilized for parking. The Clark Dike is visible adjacent to the eastern property boundary. The entire Site configuration is now visible with four runways and associates taxi-ways. The buildings at 233, 239, 251, and 269 Maxim Road are more clearly outlined. The abandoned structure is visible northeast of that building at 269.	A large compound of structures is located west of the Site, adjacent to the current western boundary of Runway 11/29. The water treatment plant at 300 Maxim Road is now visible with multiple tank structures.
1952	The four runways on Site appear to be paved with the same configuration as previously shown on the 1943 aerial.	Several large structures are visible to the northwest of the Site adjacent to a railroad track.
1959	The Site appears similar to the 1952 aerial with the addition of several taxiways. The aerial image is difficult to discern. The two western most hangars along Maxim Road are no longer a part of the current Site parcel boundary.	The surrounding area appears similar to the 1952 aerial.
1962	The Site is shown with the same configuration as previously discussed.	A new commercial development with multiple structures is visible west of the Site. A new structure is also visible northwest of the current runway 11/29.
1967	The Site depicts the current property boundary with a new runway (11/29) located in the southern portion. Buildings H2, H3, and three of T-Hangars are now visible along the western property boundary, east of Lindbergh Drive.	Large storage tanks are visible in the surrounding area north of the Site. Additional development is visible along the now Murphy Road.
1970	The Site appears similar to the 1967 aerial. Small aircrafts are stored predominately north and south of the T-Hangars. The northern portion of the Site is not shown in the aerial.	A large expansion is visible at the southern adjacent water treatment facility. Additional development is visible west of Lindbergh Drive along Murphy Road.
1972	The Site appears similar to the 1970 aerial; however, the image is difficult to discern.	Additional development is visible west of Lindbergh Drive along Murphy Road. Two large lagoon areas are visible at the wastewater treatment plant located south of the Site.
1985	Buildings H1 and the adjacent office/restaurant is now visible. Asphalt paving and additional taxiways are shown throughout the Site. The control tower is visible at the central portion of the Site. The ConnDOT Shed is visible southeast of the 269 Maxim Road building. Two tank pads appear to be visible in the grass areas north of H1.	Significant changes were not observed subsequent to the 1972 aerial photograph. The adjacent northern parcel appears to be undergoing development.

Aerial Photographs		
Year	**Site**	**Surrounding Properties**
1989	Significant changes were not observed after the 1985 aerial photograph. The southern portion of the Site is not shorn in the aerial.	The northern adjacent parcel is now developed with a portion of the trash to energy power plant located north of the Site.
1990	Significant changes were not observed after the 1989 aerial photograph. Several areas of apparent new asphalt paving are visible south of building H2, southeast of building H3, south of the southern helipad, southeast of the office/restaurant/ and north of building H1. Two ASTs appear to be visible in the area of the current tank farm located northwest of H1.	Significant changes were not observed after the 1989 aerial photograph.
1995	Building H4 is now visible southeast of H3.	Significant changes were not observed after the 1990 aerial photograph.
2006	T-Hangars located at 230 and 240 Lindbergh Drive are now visible south of the three original T-Hangars. A tank and dispenser pad are visible north of the Maintenance Building at 233 Maxim Road.	Significant changes were not observed after the 1995 aerial photograph.
2010	The CT Aero Tech School is now visible, along the engine test cell, electrical vault, and generators located west of the control tower.	Significant changes were not observed after the 2006 aerial photograph.
2014-2018	A portion of the CAA Maintenance Garage located at 233 Maxim Road has been razed from the southwest corner of the building. The new CAA ARFF is visible in the northwest corner of the Site. The Site now appears to reflect current conditions.	Significant changes were not observed after the 2010 aerial photograph.

5.8.3 Topographic Maps

Historical topographic maps of the Site and surrounding area were searched by EDR. Below is a summary of the site and surrounding properties. Topographic maps are included in Appendix G.

Topographic Maps		
Year	**The Site**	**Surrounding Properties**
1892-1906	The Site appears generally flat and undeveloped.	The surrounding area appears sparsely developed with a railroad track to the west and the Connecticut River to the east.
1944-1953	The Site appears with the original airport configuration. At least four structures are located at the northern portion of the property. The Clark Dike is visible along the eastern property boundary.	The surrounding area has become increasingly developed. The wastewater treatment is visible to the south with two pond features to the east. The northern adjacent property is shown as a water feature, followed by the trash to energy plant with multiple large AST features to the west.
1963 & 1964	The Site appears with the property boundary that currently exists today.	Additional development west of the Site is visible along Maxim and Brainard Road. The Connecticut River is depicted with a tidal flat area east of the Clark Dike.
1972-1984	The Site appears with additional tarmac. The T-Hangars, H3, H2, and the buildings at 233, 238, 251, and 269 Maxim Road.	The surrounding area has become increasingly developed.
1992	Buildings H4, H1, and the restaurant/office are now visible along the western property boundary.	Significant changes were not observed after the 1984 map.
2012-2018	Significant changes were not observed after the 1972 Topographic Map.	Individual buildings are no longer depicted on the map. The Connecticut River lists the area as the Clay Banks Bar Channel.

5.8.4 Fire Insurance Maps

Fire Insurance Maps for the Site and vicinity dating between 1917 and 1979 were searched by EDR. However, pertinent features were only shown on the 1950 and 1979 Sanborn Fire Insurance Maps. Below is a summary of the site and surrounding properties. The Sanborn Fire Insurance Maps provided by EDR are included in Appendix G.

Sanborn Fire Insurance Maps

Year	The Site	Surrounding Properties
1950	The northern portion of the Site is depicted with buildings located at 233, 239, 251, 269 Maxim Road. 233 Maxim Road is labeled "Municipal Hangar". 239 Maxim Road is labeled as "Shop". 251 Maxim Road is labeled as the "CT Department of Aeronautics". 269 Maxim Road is labeled as the "USA 43rd Division Air Service Building". A gas tank is shown northwest of the 251 Maxim Road and north of the 259 Maxim Road buildings.	The surrounding property to the west of the northern portion of the Site includes the Aviation Service Co. and Descomb Flying Service hangars, which now appear to be located outside the Site. A gas tank is located south of each building, and west of the Aviation building.
1979	The northern portion of the Site is depicted with buildings located at 233, 239, 251, 269 Maxim Road. Significant changes were not observed after the 1950 Sanborn Fire Insurance Map, except for 233 Maxim Road is labeled "Municipal Hangar" with a possible garage structure and office located to the southwest and the abandoned structure northeast of 269 Maxim Road is visible and labeled "Storage". The southern portion of the Site is not depicted on the map.	A separate map depicts the surrounding area northwest of the Site with various commercial structures, one of which is labeled sheet metal works that appears to have been located west of the current Lindbergh Drive. An eight-inch water pipe is shown below Maxim Road.

5.9 Historic Adjoining Property Use

The objective of consulting historical sources is to develop a history of the previous uses of the surrounding properties to help identify the likelihood of past uses having led to RECs and AOCs in connection with the property. The historical uses of adjoining properties to the site were evaluated using the standard historical sources noted above.

The trash to energy facility, most recently occupied by MIRA, is located north of the Site at 300 Maxim Road and Reserve Road. The facility formerly utilized coal and fuel oil prior to trash conversion sometime in the 1970s. The facility has been in operation since at least the 1930s and is slated for closure by the state. The area surrounding the trash plant is generally understood to be impacted by historical industrial activity (dumping, ash, etc.)

The MDC wastewater treatment facility is located south of the Site at 231 Brainard Road. The treatment plant was established in the 1920s, with multiple expansions projects, including the construction and use of two lagoons located south of runway 2-20. Due to the nature of wastewater treatment, any system overflows or compromises in the wastewater system design could impact the surrounding area.

The adjacent properties to the west of the Site are occupied by various commercial/light industrial operations. The area became increasingly developed in the 1960s-1970s. Most of the adjacent properties were observed to historically utilize, store, and generate hazardous waste.

5.10 Potential for Vapor Encroachment

The ASTM Phase I Standard requires an assessment of the potential for hazardous vapors to migrate onto or within the subject property. Migrate/migration is defined as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The ASTM Phase I Standard also states that the "practice should not be construed to require application of the Guide E2600 standard to achieve compliance with all appropriate inquiries." Guide E2600 refers to ASTM E2600-10, Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions. It was not within the scope of services to provide a VES in accordance with ASTM E2600-10. However, much of the information gathered through a Phase I ESA is duplicative of that used in Guide E2600 for a "Tier 1" VES; therefore, Tighe & Bond has used evaluation principles consistent with the Tier 1 approach to assess the potential for hazardous vapors to migrate onto or within the subject property that could create a Potential Vapor Intrusion Condition (PVIC) at the site.

Based on information provided in the EDR Report and obtained from the various file reviews and previous environmental reports, there have been numerous spills and/or LUSTs on the Site. Surrounding properties have had several recorded spills or LUSTs or have been identified in state programs like the VCP or PTP. Groundwater impacts have been documented on the northern adjacent property, as well properties in the regional area. Groundwater flow is likely to the southeast towards the Connecticut River. Based on this information, a PVIC may exist on the Site.

Section 6
Site Reconnaissance

6.1 Methodology and Limiting Conditions

Ms. Kristi Gagnon and Mr. Mark Paulsson of Tighe & Bond conducted a Site reconnaissance on March 6, 2023. Photographs taken during the reconnaissance are included in Appendix A.

The Site reconnaissance included a visual assessment of Site conditions on the day of the inspection. A visual assessment of adjoining properties from the subject property line, public rights-of-way and/or other vantage points (e.g., aerial photography) including a visual assessment where hazardous substances may be or may have been stored, treated, handled or disposed was also conducted.

Tighe & Bond was unable to fully inspect the interior portions of several buildings in areas where concrete floors had been coated or painted, or storage covered flooring areas. Buildings with numerous rooms like the State Police/Urban Search and Rescue and the CT Aero Tech School were observed with a focus on chemical/storage and/or potential AOCs. A representative portion of each building was observed; areas not observed included offices or classrooms.

The CAA Administration building was not entered due to documented dilapidation from flooding per the CAA. A walkthrough video of the building condition and 2020 HBMA report were also provided to Tighe & Bond for review.

6.1.1 Non-Scope Considerations

Non-scope considerations or services as defined in the ASTM Phase I Standard (e.g., Business Environmental Risks including asbestos containing materials, lead paint, etc.) were not evaluated as part of the Phase I ESA.

6.2 Visual Site Inspection

Tighe & Bond visually observed accessible building interior and exterior areas of the Site on March 6, 2023. An aerial Ste plan is provided as Figure 2. A Site Plan is included as Figures 3, 3-1 and 3-2.

6.2.1 Interior Observations

The following table summarizes specific ASTM conditions of concern noted during the interior inspection and where in this report those are described further.

INTERIOR INSPECTION			
Condition	Observed		Further Described
	Yes	No	
Hazardous Substances/Petroleum Products in Containers	X		Report Section 6.3.1
Unidentified Substances in Containers	X		Report Section 6.3.1
Storage Tanks	X		Report Section 6.3.2
Drains, Trenches or Sumps	X		Report Section 6.3.3
Wastewater Discharge	X		Report Section 6.3.3

Wells		X	Report Section 6.3.3
Odors (strong, pungent, noxious)		X	Report Section 6.3.4
Pools of Liquid	X		Report Section 6.3.5
Potential PCB Containing Equipment	X		Report Section 6.3.6
Stains or Corrosion	X		Report Section 6.3.8
Other	X		Report Section 6.3.11

6.2.2 Exterior Observations

The following table summarizes specific ASTM conditions of concern noted during the exterior inspection and where in this report those are described further.

EXTERIOR INSPECTION			
Condition	Observed		Further Described
	Yes	No	
Hazardous Substances or Petroleum Products in Containers	X		Report Section 6.3.1
Unidentified Substances in Containers	X		Report Section 6.3.1
Storage Tanks	X		Report Section 6.3.2
Wastewater/Storm Water Discharges	X		Report Section 6.3.3
Manholes/Catch Basins	X		Report Section 6.3.3
Septic Systems/Cesspools		X	Report Section 6.3.3
Wells (Drinking Water, Monitoring, Etc.)	X		Report Section 6.3.3
Odors (strong, pungent, noxious)		X	Report Section 6.3.4
Pools of Liquid		X	Report Section 6.3.5
Potential PCB Containing Equipment	X		Report Section 6.3.6
Pits, Ponds, Lagoons		X	Report Section 6.3.7
Stained Soil or Pavement		X	Report Section 6.3.8
Stressed Vegetation		X	Report Section 6.3.9
Solid Waste/Debris	X		Report Section 6.3.10
Other	X		Report Section 6.3.11

6.3 Summary of Environmental Site Features

6.3.1 Hazardous Substances and Petroleum Products (Drums & Containers)

The following is a list of significant storage areas observed with hazardous substances or petroleum products by building.

Building ID	Location	Hazardous Substances or Petroleum Products[9]
N/A	West of Clark Dike	-A jet fuel valve was identified along the toe of the Clark Dike. The 2012 TRC report states that a jet fuel pipeline enters the Site from the south and then exists the airport property to the north.

[9] Given the quantity and variety of materials stored, the list of hazardous substances or petroleum products may not be inclusive of all materials utilized or stored on the Site.

Building ID	Location	Hazardous Substances or Petroleum Products[9]
H1 – FBO Hangar (20 Lindbergh Drive)	1st Floor – Machine Shop (eastern portion of the building)	-Significant storage of paint, petroleum products, solvents, etc. (mostly stored in cabinets with some 5-gallon containers stored on the concrete) -(1) Parts Washer
H1 – FBO Hangar (20 Lindbergh Drive)	Eastern Wall of Hangar – Battery Room	-Battery Storage/Charging Station
	Eastern Wall of Hangar – Compressor Room	-(1) Compressor (staining observed to the concrete) -Numerous 1-quart containers of oil
	Eastern Wall of Hangar – Storage Area	-(1) 55-Gallon Drums – Mineral Spirits (within containment) -(2) 55-Gallon Drums – Speedy Dry, Aircraft Cleaner II
	Northwestern Wall of Hangar	-(2) 55-Gallon Drums – AvGas 100LL (on containment) -(2) 55-Gallon Drums – Av Gas 100LL, Dice Fuel Ice Inhibitor -(1) 55-Gallon Drum – FSII Fuel Ice Inhibitor -(1) 55-Gallon Drum – Prist Fuel Ice Inhibitor (within containment)
	Western Wall of Hangar	-(1) Flammable Cabinet (various small quantity products, minor staining and corrosion observed at the bottom of the cabinet)
	Southern Exterior	-(1) 65-Gallon Spill Kit
	Eastern Exterior Area	-(4) Fuel Trucks Jet-A or AvGas 100LL
H2 – FBO Hangar (Lindbergh Drive)	Southern Wall of Hangar – 1st Floor Storage Room	-Numerous 5-gallon containers or less of paint, petroleum products, solvents, etc.
	Southern Wall of Hangar – East of Storage Room	-(1) Parts Washer
	Southeastern Wall of Hangar	-(1) ~5-Gallon Hydraulic Tank (for hangar door)
	Northeastern Wall of Hangar	-(1) Flammable Cabinet (various small quantity products) -(15) 55-Gallon Drums – AvGas 100LL, Oils, Antifreeze (some on containment) -(1) Generator (portable) -Several gasoline containers -(1) 5-Gallon Container – Frank's Special Cleaner -(2) Wheeled fire extinguishers reportedly containing chlorodifluorobromomethane compressed gas
	Northeastern Exterior	-(1) Fuel Truck Jet-A (labeled Hartford Jet Center)
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Southwestern Wall of Hangar	-(1) Compressor

Building ID	Location	Hazardous Substances or Petroleum Products[9]
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Southern Wall of Hangar – Storage Area	-Minor quantities of various petroleum products.
	Southern Wall of Hangar	-(1) ~30-Gallon Gasoline Tank (portable) -(1) Parts Washer
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Southeastern Wall of Hangar	-Several 5-gallon containers – Contents Unknown -Batteries
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Northeastern Wall of Hangar	-(1) 55-gallon Drum – AvGas 100LL -(1) Overpack Drum – Contents Unknown -Several 5-gallon empty/residual oil containers (minor staining observed to the concrete floor)
	Northern Wall of Hangar	-(1) 55-Gallon Drum – AvGas 100 LL (on containment) -(2) 55-Gallon Drums – Isopropyl Alcohol (on containment) -(2) 5-Gallon Containers (wash thinner) -Battery Storage/Charging Station
	Southwestern Wall of Hangar	-(1) Compressor
	Northwestern Wall of Hangar	-(1) Flammable Cabinet (various small quantity products)
H4 – FBO Hanger/Office (Lindbergh Drive)	Southeastern Wall of Hangar	-(1) 55-Gallon Drum – Mineral Spirits (within containment) -(1) ~30-Gallon Gasoline Tank (portable)
	Northeastern Wall of Hangar	-(2) Overpack Drums – Contents Unknown -(1) Compressor -Several 5-gallon empty/residual oil containers within a containment area.
FBO - Office/Restaurant (20 Lindbergh Drive)	N/A	N/A
CAA – Maintenance Garage (233 Maxim Road)	Eastern Wall of Hangar	-(1) Flammable Cabinet (various small quantity products) -(1) Parts Washer
	Northeastern Wall of Hangar	-Several 55-gallon drums and 5-gallon containers of various petroleum products (stored on containment, **minor staining was observed to the concrete**) -(1) Compressor **(staining observed to the concrete)**
	Northern Wall of Hangar	-(2) Flammable Cabinets (various small quantity products) -Several 55-Gallons – Paint
	Western Exterior	-A fire rescue truck is parked at the exterior. According to Bill Borowiec (CAA Environmental Analyst) unknown if aqueous film forming foam (AFFF) was previously utilized within the unit.
CAA – Maintenance Shop (239 Maxim Road)	Southern Garage Bay	-A fire rescue truck with a 40-gallon tank of AFFF is parked within.
	Northern Garage Bay	-Several 55-Gallon Drums – Paint -Several 5-gallon containers of Purple K (dry powder fire suppression) are stored on a pallet. -(1) 5-Gallon Container – AFFF (apparently empty) -(1) Compressor

Building ID	Location	Hazardous Substances or Petroleum Products[9]
CAA – Maintenance Shop (239 Maxim Road)	Northern Garage Bay – Storage Office	-Minor quantities of petroleum products and solvents.
CAA – Administration (251 Maxim Road)	Not Observed	Not Observed
CT State Police/Urban Search and Rescue/Former National Guard (269 Maxim Road)	North Central Portion of Hangar	-(1) Flammable Cabinet (various small quantity products) -Multiple Generators (portable, presumed empty)
	Northern Wall of Hangar	-(2) Flammable Cabinets (various small quantity products)
	Northern Wall – Storage Room	-Small equipment and minor quantities of petroleum products, paint, solvents, etc.
	Northern Wall – Radiological Equipment Storage	-Stored equipment like dosimeter badges and Geiger counters.
	Northern Police Garage (Not Observed)	Not Observed (minor quantities of petroleum products and solvents are presumed to exist)
	Eastern Exterior	-(1) Generator (not operational)
T-Hangar 1-10	Not Observed	Not Observed (minor quantities of petroleum products and solvents are presumed to exist)
T-Hangar 11-20		
T-Hangar 21-30		
T-Hangar (230 Lindbergh Drive)		
T-Hangar (240 Lindbergh Drive)	Unit -9/Unit-14	-Not all interior spaces observed -Minor quantities of petroleum products, paints, solvents, etc. (minor staining observed to concrete in each unit)
FAA Control Tower (1 Lindbergh Drive)	Not Observed	-Not Observed -(1) Diesel Generator
CT Aero Technical School (500 Lindbergh Drive)	Southeastern Portion of School - Paint Booths	-Walk-In-Booth and Wall Booth
	Southeastern Portion of School - Hazardous Storage Room	-Several flammable cabinets with petroleum products, pain, solvents -(55)-Gallon Drum – Presumed Oil
	Southeastern Portion of School - Hallway	-(1) Flammable Cabinet (various small quantity products)
	Southeastern Portion of School – Composite Room	-(1) Compressor

Building ID	Location	Hazardous Substances or Petroleum Products[9]
CT Aero Technical School (500 Lindbergh Drive)	Southeastern Portion of School – Utility Room	-(2) Compressors
	Southeastern Portion of School – Acid Battery Room	-Acid Battery Storage
	Southeastern Portion of School – NiCad Battery Room	-Nickel-Cadmium Battery Storage
	Southern Portion of School – Carburetor Room	-Minor Fuel Quantities
	Northeastern Portion of School	-(1) Parts Washer
	Western Wall of Hangar	-(1) Flammable Cabinet (various small quantity products)
	Western Wall of Hangar – Storage Room	-(2) Flammable Cabinets (various small quantity products) -Significant storage of small quantity petroleum products, paints, solvents, etc.
	Southern Utility Area – Western Wall	-(2) Flammable Cabinets (various small quantity products) -Landscape equipment -(1) Compressor
	Southern Utility Area – Fire Suppression Room	-(2) 55-Gallon Drums – AFFF (adjacent to (2) AFFF storage tanks)
	Southern Exterior	-(1) Diesel Generator
CT Aero Technical School – Engine Test Room (500 Lindbergh Drive)	North Room	-(1) ~30-Gallon Gasoline Tank (portable)
	South Room	-(6) 55-Gallon Drums – Fuel Ice Inhibitors, Mineral Spirits, Oil, and Antifreeze
CAA – Electrical Vault	Western Exterior	-(1) Diesel Generator
CAA – Sand/Urea Shed	N/A	N/A
CT State Police – Abandoned Building	Northeastern Area	-Several metal drums were observed dumped by the fence. The drums appeared empty; contents are unknown.
CAA – ARFF (4 Maxim Road)	East Garage – Southeastern Wall	-(1) Flammable Cabinet (various small quantity products)

Building ID	Location	Hazardous Substances or Petroleum Products[9]
CAA – ARFF (4 Maxim Road)	East Garage – Eastern Wall	-(2) 55-gallon drums and several 5-gallon containers of various petroleum products (on containment) -Several 55-Gallon Drums – Paint
	East Garage – Western Wall	-(1) Flammable Cabinet (9) 2.5-Gallon Containers – Ranger Pro Herbicide
	Compressor Room	-(1) Compressor
	Garage Bay	-(1) 3-Ton Overhead Crane (possibly hydraulic)
	South Garage – Western Wall	-Several 5-Gallon Containers – Paint -Several 2.5-Gallon Containers – Prosecutor Herbicide and Applicator Tank
CAA – ARFF (4 Maxim Road)	South Garage – Northern Wall	-(5) 55-Gallon Drums – AFFF (stored on pallets) -Numerous 5-Gallon Containers – AFFF (presumed empty on metal pallet)
	Northwest Exterior	-(1) Diesel Generator
CAA Fuel Farm	Southern Exterior	-(1) 55-Gallon Drum – Contents Unknown (likely spill kit)
FBO Fuel Farm	Northern Exterior	-(1) Flammable Cabinet (decanting containers) -(1) 65-Gallon Spill Kit

6.3.2 Underground and Aboveground Storage Tanks

The following is a list of observed ASTs by building.

Building ID	Location	AST
H1 – FBO Hangar (20 Lindbergh Drive)	N/A	N/A
H2 – FBO Hangar (Lindbergh Drive)	Northeastern Wall of Hangar	-(1) ~275-Gallon Waste Oil (within plastic containment)
	Northern Exterior	-(2) ~275-Gallon (appeared empty and stored)
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Northwestern Exterior	-(1) 275-Gallon Waste Oil (within metal containment)
H4 – FBO Hanger/Office (Lindbergh Drive)	N/A	N/A
FBO - Office/Restaurant (20 Lindbergh Drive)	N/A	N/A
CAA – Maintenance Garage (233 Maxim Road)	Hangar	-(1) ~200-Gallon Asphalt Sealant (portable)
CAA – Maintenance Shop (239 Maxim Road)	N/A	N/A
CAA – Administration (251 Maxim Road)	Not Observed	Not Observed

Building ID	Location	AST
CT State Police/Urban Search and Rescue/Former National Guard (269 Maxim Road)	N/A	N/A
T-Hangar 1-10	Not Observed	Not Observed
T-Hangar 11-20		
T-Hangar 21-30		
T-Hangar (230 Lindbergh Drive)		
T-Hangar (240 Lindbergh Drive)	Unit -9/Unit-14	-Not all interior spaces observed
FAA Control Tower (1 Lindbergh Drive)	Not Observed	-Not Observed
CT Aero Technical School (500 Lindbergh Drive)	Southern Utility Area – Fire Suppression Room	-(2) 3,028-Gallon AFFF
CT Aero Technical School – Engine Test Room (500 Lindbergh Drive)	N/A	N/A
CAA – Electrical Vault	N/A	N/A
CAA – Sand/Urea Shed	N/A	N/A
CT State Police – Abandoned Building	N/A	N/A
CAA – ARFF (4 Maxim Road)	N/A	N/A
CAA Fuel Farm	Southwest of CAA - ARFF	-(1) Compartmentalized 1,000-Gallon Gasoline/1,000-Gallon Diesel Double-Walled Steel/Concrete
FBO Fuel Farm	North of H1	-(1) 12-000-Gallon – Jet-A Fuel (within concrete containment) -(1) 12,000-Gallon – AvGas 100LL (within concrete containment) -(1) 500-Gallon – Gasoline (within concrete containment, staining observed) -(1) ~300-Gallon – Diesel (within concrete containment, staining observed)

No other evidence of existing storage tanks was observed during the Site reconnaissance.

6.3.3 Wells, Drywells, Floor Drains, Trenches, Sumps, Manholes, Catch Basins, and Oil/Water Separators

The following is a list of observed wells, floor drains, trenches, or catch basins by building, unit, and most recent tenant.

Building ID	Location	Description[10]
Site	Throughout	An extensive catch basin system is located throughout the Site associated with Drainage Areas (A through D). Drainage A and B connect to the Connecticut River. Drainage C and D connect to the MDC sanitary sewer, including drains from the building interiors.
H1 – FBO Hangar (20 Lindbergh Drive)	Hangar	-(6) Square Floor Drains (staining observed around the southeastern most drain) -(1) Oil/Water Separator (presumed to be located below the southwest corner of the hangar)
H2 – FBO Hangar (Lindbergh Drive)	Hangar	-(4) Round Floor Drains -(1) Oil/Water Separator (apparent shared connection to the unit located northwest of H3)
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Hangar	-(1) Floor Trench Drain
	Northwestern Exterior	-(1) Oil/Water Separator (apparent shared connection with H2) -(1) Former Oil/Water Separator (located southwest of the current unit)
H4 – FBO Hanger/Office (Lindbergh Drive)	Hangar	-(4) Round Floor Drains
	Northern Exterior	-(1) Oil/Water Separator
FBO - Office/Restaurant (20 Lindbergh Drive)	Restroom	-(1) Round Floor Drain
CAA – Maintenance Garage (233 Maxim Road)	Hangar	-(2) Square Floor Drains
	Northeastern Exterior	-(1) Oil/Water Separator (apparent shared connection with CAA – Maintenance Shop)
CAA – Maintenance Shop (239 Maxim Road)	Southern Garage Bay	-(1) Floor Drain (reported, not observed)
	Eastern Exterior	-(1) Oil/Water Separator (apparent shared connection with CAA – Maintenance Garage)
CAA – Administration (251 Maxim Road)	Not Observed	Not Observed (floor drains likely exist associated with restroom or utility rooms)
CT State Police/Urban Search and Rescue/Former National Guard (269 Maxim Road)	Basement Furnace Room	-(2) Round Floor Drains -Sump
	Hangar	-(2) Floor Trench Drains
	1st Floor	-(1) Round Floor Drain (eastern hallway, staining observed) -Several potential floor drain/sump areas were observed on the first floor near door areas. Two were observed in the hangar, and one in eastern hallway.

[10] Given the presence of stored equipment, materials, and vehicles and other access limitations, the list of drainage features identified may not be comprehensive.

Building ID	Location	Description[10]
CT State Police/Urban Search and Rescue/Former National Guard (269 Maxim Road)	Eastern Parking Area	-Vehicle wash water from the washing station is reportedly collected into a holding tank
T-Hangar 1-10	Not Observed	Not Observed (drains are not anticipated to exist)
T-Hangar 11-20		
T-Hangar 21-30		
T-Hangar (230 Lindbergh Drive)		
T-Hangar (240 Lindbergh Drive)	Unit -9/Unit-14	-Not all interior spaces observed (drains are not anticipated to exist)
FAA Control Tower (1 Lindbergh Drive)	Not Observed	Not Observed (floor drains likely exist associated with restroom or utility rooms)
CT Aero Technical School (500 Lindbergh Drive)	Hangar	-(1) Floor Trench Drain
	Hangar/Classrooms	-(4) Round Floor Drains (mostly at eye wash stations)
	Southeastern Portion of School – Utility Room	-(1) Round Floor Drain (condensate)
	Southern Utility Area – Fire Suppression Room	-(1) Round Floor Drain
CT Aero Technical School (500 Lindbergh Drive)	Southern Exterior	-(1) Oil/Water Separator
CT Aero Technical School – Engine Test Room (500 Lindbergh Drive)	N/A	N/A
CAA – Electrical Vault	N/A	N/A
CAA – Sand/Urea Shed	N/A	N/A
CT State Police – Abandoned Building	N/A	N/A
CAA – ARFF (4 Maxim Road)	East Garage Bay	-(2) Round Floor Drains -(1) Floor Trench Drain
	Custodial Closet	-(2) Round Floor Drains
	Furnace Room	-(5) Round Floor Drains (staining observed to one drain)
	Restrooms	-(4) Round Floor Drains

Building ID	Location	Description[10]
CAA – ARFF (4 Maxim Road)	South Garage Bay	-(1) Floor Trench Drain
	Southern Exterior	-(1) Oil/Water Separator
CAA Fuel Farm	N/A	N/A
FBO Fuel Farm	Within and North of Concrete Containment	-(2) Square Catch Basins (reportedly connected to a holding tank, each basin appeared to be full of water with a petroleum sheen)

A reported toe drain was observed along the Clark Dike within the southeast portion of the Site. The toe drain flows southerly and through a culvert to the adjacent south property (MDC).

6.3.4 Odors

Tighe & Bond noticed a slight petroleum odor within the containment area of the FBO fuel farm on the day of the Site reconnaissance.

6.3.5 Pools of Liquid

Tighe & Bond did not note any pools of liquid on the day of the Site reconnaissance.

6.3.6 Potential Polychlorinated Biphenyls (PCBs)

PCBs were used until 1978 and have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors, and hydraulic systems. PCBs can also be present in building materials; however, assessment of hazardous building materials is outside the scope of the ASTM Standard. The following table is a list of potential PCB containing material observed on the Site on the days of the inspection.

Building ID	Location	Potential PCB Containing Equipment
N/A	Maxim Road	-Pole-mounted transformers were observed along Maxim Road that appear to be adjacent to the Site. It should be noted that the exact property boundary could not be determined in the field, and it is possible that these transformers could be on the Site.
H1 – FBO Hangar (20 Lindbergh Drive)	Northern Exterior	-(1) Pad-Mounted Transformer
H2 – FBO Hangar (Lindbergh Drive)	N/A	N/A
H3 – FBO Hangar/Office (58 Lindbergh Drive)	N/A	N/A
H4 – FBO Hanger/Office (Lindbergh Drive)	N/A	N/A
FBO - Office/Restaurant (20 Lindbergh Drive)	N/A	N/A

Building ID	Location	Potential PCB Containing Equipment
CAA – Maintenance Garage (233 Maxim Road)	N/A	N/A
CAA – Maintenance Shop (239 Maxim Road)	N/A	-(1) Pad-Mounted Transformer
CAA – Administration (251 Maxim Road)	N/A	N/A
CT State Police/Urban Search and Rescue/Former National Guard (269 Maxim Road)	Eastern Parking Area	-(1) Pad-Mounted Transformer -(3) Pole-Mounted Transformers
T-Hangar 1-10	N/A	N/A
T-Hangar 11-20		
T-Hangar 21-30		
T-Hangar (230 Lindbergh Drive)		
T-Hangar (240 Lindbergh Drive)		
FAA Control Tower (1 Lindbergh Drive)	Not Observed	-Not Observed -(1) Pad-Mounted Transformer
CT Aero Technical School (500 Lindbergh Drive)	Southern Exterior	-(1) Pad-Mounted Transformer (a non-PCB label with less than 2 ppm dielectric fluid was observed)
CT Aero Technical School – Engine Test Room (500 Lindbergh Drive)	N/A	N/A
CAA – Electrical Vault	Southern Exterior	-(1) Pad-Mounted Transformer
CAA – Sand/Urea Shed	N/A	N/A
CT State Police – Abandoned Building	N/A	N/A
CAA – ARFF (4 Maxim Road)	Western Exterior	-(1) Pad-Mounted Transformer (a non-PCB label with less than 2 ppm dielectric fluid was observed)
CAA Fuel Farm	N/A	N/A
FBO Fuel Farm	N/A	N/A

Although not specifically called out in the table above, the potential exists for PCB containing hydraulic fluid is used in connection with the hangar door hydraulic system at the H2 – FBO Hangar. In addition, PCBs may be associated with the compressors identified in Section 6.3.1. However, based on the apparent age and type of equipment, the potential for PCBs to be present is minimal.

6.3.7 Pits, Ponds, and Lagoons

Tighe & Bond did not observe any pits, ponds, or lagoons on the property. A potential wetland/drainage feature was observed north of the CT Aero Tech School Engine Test Room. Two lagoon areas are located on the southern adjacent property, associated with the MDC wastewater treatment plant. The northern most lagoon has been filled in as an anticipated land swap agreement to potentially lengthen runway 2-20.

6.3.8 Staining – Interior Floors, Exterior Soil, and Pavement

The following table is a list of the most notable staining observed on the day of the Site reconnaissance by building.

Building ID	Location	Staining
N/A	Site Asphalt	De minimis staining of the asphalt is present in typical parking areas.
H1 – FBO Hangar (20 Lindbergh Drive)	Eastern Wall of Hangar – Compressor Room	-Staining was observed to the concrete around the compressor.
	Southeastern Portion of the Hangar	-Staining of the concrete was observed leading to the floor drain.
	Western Wall of Hangar	-Minor staining and corrosion were observed at the bottom of the flammable cabinet.
H2 – FBO Hangar (Lindbergh Drive)	Southeastern Portion of the Hangar	-Minor staining was observed to the concrete.
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Northeastern Wall of Hangar	-Minor staining was observed to the concrete floor near empty 5-gallon oil containers.
H4 – FBO Hanger/Office (Lindbergh Drive)	N/A	N/A
FBO - Office/Restaurant (20 Lindbergh Drive)	N/A	N/A
CAA – Maintenance Garage (233 Maxim Road)	Northeastern Wall of Hangar	-Minor staining of the concrete was observed to the concrete in the northern portion of the bay. -Staining was observed to the concrete around the compressor.
CAA – Maintenance Shop (239 Maxim Road)	N/A	N/A
CAA – Administration (251 Maxim Road)	Not Observed	Not Observed
CT State Police/Urban Search and Rescue/Former National Guard (269 Maxim Road)	1st Floor	-Localized staining was observed leading to the floor drain.

Building ID	Location	Staining
T-Hangar 1-10	Not Observed	Not Observed (de minimis staining of the concrete floor likely exists throughout the leased spaces)
T-Hangar 11-20		
T-Hangar 21-30		
T-Hangar (230 Lindbergh Drive)		
T-Hangar (240 Lindbergh Drive)	Unit -9/Unit-14	-Not all interior spaces observed -Minor staining observed to concrete in each unit
FAA Control Tower (1 Lindbergh Drive)	Not Observed	-Not Observed
CT Aero Technical School (500 Lindbergh Drive)	N/A	N/A
CT Aero Technical School – Engine Test Room (500 Lindbergh Drive)	N/A	N/A
CAA – Electrical Vault	N/A	N/A
CAA – Sand/Urea Shed	N/A	N/A
CT State Police – Abandoned Building	N/A	N/A
CAA – ARFF (4 Maxim Road)	Electric Utility Room	-Staining was observed on the concrete floor.
	Furnace Room	-Staining was observed around one floor drain.
CAA Fuel Farm	N/A	N/A
FBO Fuel Farm	Within Concrete Containment	-The asphalt appeared stained in the northern portion of the containment. Staining to the concrete was observed around the western diesel AST. The catch basins located within and north of the containment appeared full with a petroleum sheen on the water.

6.3.9 Stressed Vegetation

Tighe & Bond did not observe stressed vegetation on the day of the Site reconnaissance however, the visit did occur during the winter season. CAA personnel did not indicate that they are aware of any stressed vegetation. An area of bare vegetation was observed at the plane crash site from January 28, 2003 just east of runway 2-20.

6.3.10 Solid Waste, Debris, and Disposal

The following table is a list of observed solid waste and general debris by building.

Building ID	Location	Description
H1 – FBO Hangar (20 Lindbergh Drive)	North Exterior	-(1) Solid Waste Dumpster
	Northwestern Exterior	-Former Solid Waste Dumpster Area (near Lindbergh Drive)

Building ID	Location	Description
H2 – FBO Hangar (Lindbergh Drive)	N/A	N/A
H3 – FBO Hangar/Office (58 Lindbergh Drive)	Northwestern Exterior	-(3) Solid Waste Dumpsters
H4 – FBO Hanger/Office (Lindbergh Drive)	N/A	N/A
FBO - Office/Restaurant (20 Lindbergh Drive)	N/A	N/A
CAA – Maintenance Garage (233 Maxim Road)	N/A	N/A
CAA – Maintenance Shop (239 Maxim Road)	N/A	N/A
CAA – Administration (251 Maxim Road)	N/A	N/A
CT State Police/Urban Search and Rescue/Former National Guard (269 Maxim Road)	Eastern Parking Area	-(4) Solid Waste Dumpsters
T-Hangar 1-10	N/A	N/A
T-Hangar 11-20		
T-Hangar 21-30		
T-Hangar (230 Lindbergh Drive)		
T-Hangar (240 Lindbergh Drive)		
FAA Control Tower (1 Lindbergh Drive)	North of Driveway	-Not Observed -(1) Solid Waste Dumpster
CT Aero Technical School (500 Lindbergh Drive)	Southwest of Structure	-(1) Solid Waste Dumpster
CT Aero Technical School – Engine Test Room (500 Lindbergh Drive)	N/A	N/A
CAA – Electrical Vault	N/A	N/A
CAA – Sand/Urea Shed	N/A	N/A
CT State Police – Abandoned Building	Eastern Exterior	-Wood and general debris was observed east of the structure.
CAA – ARFF	Southern	-(1) Solid Waste Dumpster

Building ID	Location	Description
(4 Maxim Road)	Exterior	
CAA Fuel Farm	N/A	N/A
FBO Fuel Farm	N/A	N/A

6.3.11 Other

Tighe & Bond observed several metal storage containers (conex boxes) located throughout the Site. The interior of each container was not inspected on the day of the Site reconnaissance. The containers east of the building at 269 Maxim Road (State Police/Former National Guard) were reportedly empty with possibly one empty generator stored within. A small shed is located south of the FBO restaurant/office that was also not inspected on the day of the Site reconnaissance. A large soil pile with woody debris was observed east of the abandoned structure. The source of the soil pile is unknown.

Section 7
Interviews

7.1 Owner

As of July 1, 2013, all airport-related activity formerly administered by ConnDOT is under the purview of the CAA. Therefore, the following CAA personnel were interviewed on February 27, 2023.

- Robert Bruno, Director of Planning, Engineering and Environmental Services
- Bill Borowiec, Environmental Analyst Regulatory Compliance
- John Moody, General Aviation Airports Manager

During the February 27, 2023 meeting, CAA disclosed that the Administrative Building (Building H) flooded several years ago and has since been in a significantly dilapidated condition. A former structure was demolished on the southwest corner of Building F (CAA Maintenance Garage) sometime around 2011. There are three known diesel generators on the Site, including one within an electrical vault south of the CT Aero Tech School. A new transformer was installed with a new building constructed in 2013 at the northwest corner of the Site. Minor solid waste dumping has occasionally occurred off-site on Maxim Road near the northeast portion of the property. The Site has never utilized a deicing pad as the property includes heated storage. CAA is aware that aircraft repair and maintenance takes place in multiple buildings. The CAA intends on incorporating part of the current MDC property in the future at the southern boundary that formerly housed two lagoons.

On the day of the Site reconnaissance (March 6, 2023), Mr. Robert Pellegrino, Airport Coordinator, stated that CAA only used sand in the CAA Sand/Urea Shed. Chemicals like sodium acetate (NaAc) are not used on the Site. As a follow-up to the Site visit, Mr. Borowiec stated that there are five known oil/water separators and three known areas of AFFF storage. The unused fire truck located west of 239 Maxim Road (CAA Maintenance Shop) previously may have utilized AFFF. According to both personnel, only water was utilized during the latest plane crash on January 28, 2023. Environmental Services, Inc. collected surficial soil soils on February 7th after two roll-off containers of soil were excavated from the area. A summary of the work has not yet been received by the CAA. While access to the T-Hangars was mostly inaccessible, CAA did indicate that the tenant space is restricted to storage only. T-Hangars 1 through 30 are not heated. The T-Hangars 230 and 240 Lindbergh Drive are heated by natural gas. The FAA Control Tower has a propane generator located on the southern side of the building.

7.2 Site Manager/Occupants

Ms. Sarah Gould, Executive Assistant of the Hartford Jet Center, provided the tour of the FBO hangars and restaurant/office. Ms. Gould indicated where general operations of each building occurred. Ms. Gould was not aware of the origin of two observed ~275-gallon ASTs located north of H3. Mr. Lindsey Rutka, Principal of the Hartford Jet Center (FBO), provided access to Unit 9 and Unit 14 of the 240 Lindbergh Drive T-Hangar. Mr. Rutka expressed environmental concerns may be present near the toe drain conduit located along the southern portion of the Clark Dike. Mr. Fabian Amuso, Building Maintenance Supervisor of the CT Aero Tech School, provided the tour of the facility and general building operations.

7.3 Local Government

Local government officials were contacted during the municipal office research although not specifically interviewed except for the Hartford Flood Control and Department of Public Works. Information obtained from the officials is included in the municipal file review portion (Section 5.2) of this report.

On March 8, 2023, Tighe & Bond discussed the Site with Mr. Mike McGarry, the Hartford Flood Control Commissioner. Mr. McGarry stated that any intrusive work on or near the Clark Dike will require Flood Control approval. The current property easement ranges from 25-50 feet along the dike. Mr. McGarry is aware of environmental concerns on/near the property as indicated by Mr. Rutka. Mr. McGarry stated the Site was previously built up in the 1920s to construct the airport.

On March 24, 2023, Tighe & Bond discussed the Site with Frank Dellaripa and Nicholas Casparino of the Department of Public Works (DPW). DPW stated that the City of Hartford first built a levee in the 1920s to protect the airport and local area. The levee was overrun by surface water during the flood of 1936 which ultimately toppled the levee. The City rebuilt the levee and the US Army Core of Engineers subsequently built the Clark Dike. River silt may have been utilized to construct some of the dike. DPW stated that the floodwall encompasses the northern adjacent trash burning facility and that the toe drain system connects through the Clark Dike along the Site. DPW reclarified that Flood Control approval is not necessary as long as any future Site investigation is planned solely on the property and not the levee or dike.

Section 8
Findings & Property Transfer Act

8.1 Findings and Conceptual Site Model

Based on a review of historic records, the Site was first developed in 1921 as Brainard Field. The National Guard Air squadron was historically present since 1923. The Department of Defense utilized the airport from approximately 1940 to 1945, during World War II. The Site was constructed in the Connecticut River Flood Plain, to which the City of Hartford built a levee in the 1920s to protect the Hartford area of South Meadows. After the catastrophic flood in 1936, the City rebuilt the levee and the US Army Corps of Engineers then built the Clark Dike along the eastern property boundary. The Site is currently leased by the State of Connecticut to several tenants and operates as a regional airport.

Previous environmental reports or studies of the Site were reviewed between 1986 and 2019. Reports that involved subsurface investigations determined that COCs were present on Site associated with former USTs, of which numerous USTs have been identified on the Site. Documentation regarding UST history, and specifically UST locations, were found to be mostly generalized across the Site. Most of the USTs were not registered with the state. The Site has also utilized several ASTs with a similar lack of known history.

Records reviewed as part of this assessment indicate that hazardous waste has been generated from the Site, previous RCRA tenants operated at the Site, 20 and 58 Lindbergh Drive were recognized as historic auto shops for aircraft, the Site has had numerous USTs, LUSTs, and spills, and the Site was formerly utilized by the Department of Defense.

Based on the completion of this Phase I ESA, Tighe & Bond has identified 5 Recognized Environmental Conditions (RECs) and 23 Areas of Concern (AOCs) for the Site. Off-site AOCs were also identified in the surrounding properties.

REC-1: Historical Releases (developed portions of the Site)

Numerous spills have been identified at the Site since at least 1974. Several of the spills included large quantity releases (greater than 50 gallons). For example, approximately 700 gallons of Jet-A fuel released in 1987 during refueling a tanker truck. Excavation or soil sampling was not documented for the 1987 release, or for the majority of the spills reviewed. The specific location of each occurrence was not observed except the following release in 2005.

1. Location: East of FBO Hangar H1 (20 Lindbergh Drive) – Turf Island

   A release occurred in April 2005 of approximately 300-gallons of aviation gasoline. The release encompassed an eight foot by 30-foot area east of the fuel truck parking within the turf island. Approximately 51.38 tons of impacted soil was excavated and disposed of off-site. Groundwater was not assessed. Current soil and groundwater conditions are unknown.

AOC-1: Historical Hangar Operations (two locations)

Historical operations likely included airplane maintenance and repair which involves the storage, use, and disposal of petroleum products, solvents, paints, fuel, or other potential contaminants. A building file from 1941 also documented the presence of a

former machine shop at one of the Brainard Field hangars, likely the north historical hangars; however, records of the exact location are limited. The National Guard was documented on the Site since 1923 and therefore military operations likely occurred in one more of the historic hangars prior to the construction of the building at 269 Maxim Road in the late 1930s.

1. Location: Northern Property Boundary – East of 251 Maxim Road

   At least three historic hangars were identified between the 1920s-1940s east of 251 Maxim Road.

2. Location: Northern Property Boundary – West of 251 Maxim Road

   One historic hangar was identified on a 1934 Sanborn map west of 251 Maxim Road.

AOC-2/REC-2: Underground Storage Tanks (twenty-eight locations)

The Site has an extensive history of USTs throughout the operation as an airport. The last known/registered USTs were removed from the Site in 2019 near the CAA Machine Shop and Maintenance Garage. Documentation regarding UST use and overall history was found to be limited, and therefore, additional unregistered USTs may exist on the Site. Several of the registered USTs were observed to be utilized beyond their typical life expectancy of 30 years. Potential spills or releases may have occurred directly to the ground surface during refueling or dispensing. Releases to soil and groundwater may have occurred if the integrity of the UST(s) and/or piping was compromised. Release may have also occurred during removal activities as applicable.

1. Former 2,500-Gallon Gasoline UST (A1) and 2,000-Gallon Gasoline (B1) and Dispenser

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Gravel Lot

   The USTs and associated dispensers are depicted on the southern portion of the lot east of the building. UST A1 was likely removed in 1985 and replaced by UST B1 that was subsequently removed in 1998. UST closure reports or sampling data was not observed for either tank.

2. Former 1,000-Gallon Diesel UST (C2) and 3,000-Gallon Diesel UST (C2R1) and Dispenser

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Gravel Lot

   The USTs and associated dispensers are depicted on the southern portion of the lot adjacent to the location of USTs A1 and B1. UST C2 was likely removed in 1989 and replaced with C2R1 that was subsequently removed in 1998. UST closure reports or sampling data was not observed for either tank.

3. Former (2) 5,000-Gallon No. 2 Fuel Oil USTs (A1 and A1R1)

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Asphalt Lot

   Located east of the building at 269 Maxim Road in the paved parking lot. UST A1 was removed in 1989 and replaced with UST A1R1 that was subsequently removed in 1998. TPH was detected in the grave above RSR criteria. TPH was also detected above criteria below the pipe trench after the excavation had

already been backfilled. VOCs were detected in groundwater below RSR criteria. Current soil and groundwater conditions are unknown.

4. Former 500-Gallon Waste Oil UST

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Gravel Lot

   TRC identified a waste oil UST (unknown size or history) in 2012 in the northwest corner of the parking lot, below the vehicle wash station. UST closure reports or sampling data was not observed.

5. Former UST

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Southern Asphalt Ramp

   A former UST location was observed in the southern ramp area of the building. The size, contents, and history of the UST are unknown. A UST closure report or sampling data was not observed.

6. Former 1,500-Gallon Jet Fuel UST (D1/JP-4)

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Asphalt Lot

   The UST was removed in 1993 in poor condition from the southeast corner of the building exterior. Impacted soil was excavated from the tank area however, the presence of a sewer line and the building foundation limited further excavation of the western wall where RSR criteria was exceeded. Groundwater was not assessed at the time of removal. A total of 59.27 tons of impacted soil was excavated for off-site disposal. CTDEEP Oil and Chemical Spills stated further excavation was not feasible based on the physical structure limitations. Current soil and groundwater conditions are unknown.

7. Former 550-Gallon and 2,000-Gallon Gasoline USTs

   Location: CAA Administration (251 Maxim Road) – Northern Asphalt Lot

   The 550-gallon UST was reportedly installed in 1929. The 2,000-gallon UST was reportedly installed in 1945. UST closure reports, or sampling data was not observed for either tank.

8. Potential Former Heating Oil UST

   Location: CAA Administration (251 Maxim Road) – Eastern Turf

   A fuel oil product delivery line was identified in the basement leading out to the northeast by TRC in 2012.

9. Former 5,000-Gallon Heating Oil UST

   Location: Unknown – Likely Northern Portion of the Site near Historic Hangars

   A heating application from December 5, 1927 approved the installation of a 5,000-gallon heating oil UST at the Pratt & Whitney aircraft building. Based on the year of installation, there is potential the UST may have been located on the northern portion of the property. A UST closure report or sampling data was not observed.

10. Former 2,000-Gallon Heating Oil UST (F1)

    Location: CAA Maintenance Shop (239 Maxim Road) – Northern Turf

The former heating oil UST was identified northeast of the building. The UST was installed in 1960 and reportedly removed in 1988. A UST closure report or sampling data was not observed.

11. Former Gasoline UST

    Location: CAA Maintenance Shop (239 Maxim Road) – Northern Turf

    A former gasoline UST (unknown size or history) was identified northwest of the building on a 1950 fire insurance map. A UST closure report or sampling data was not observed.

12. Former 4,000-Gallon Gasoline UST (U1) and 4,000-Gallon Diesel UST (D2) and Associated Dispenser Island

    Location: CAA Maintenance Shop (239 Maxim Road) – Southwest of Building

    The USTs and dispenser island were removed in 2019 from the asphalt lot southwest of the building. PAHs were detected above RSR criteria in soil collected below the diesel dispenser. Soil was excavated from the area, resampled, and found to contain concentrations of PAHs below RSR criteria. A total of 13.77 tons of impacted soil was excavated for off-site disposal. ETPH was detected at low concentrations below RSR criteria. ETPH and total xylenes were detected in groundwater at low concentrations but above the SWPC. PAHs were detected in groundwater at concentrations below RSR criteria. Based on the results, the excavation was backfilled and paved.

13. Former 2,000-Gallon Gasoline UST (R1)

    Location: CAA Maintenance Garage (233 Maxim Road) – Northeastern Turf

    The former gasoline UST was reportedly installed in 1977 and removed in 1988. Soil and groundwater impacts were identified in the nearby UST grave of tanks U1 and D2 located to the west. A UST closure report or sampling data was not observed.

14. Former 2,000-Gallon Diesel UST (D1)

    Location: CAA Maintenance Garage (233 Maxim Road) – Southern Asphalt Tie-Down Area

    The former diesel UST was reportedly installed in 1965 and removed in 1988. A UST closure report or sampling data was not observed.

15. Former (2) 10,000-Gallon AvGas 100LL USTs

    Location: CAA Maintenance Garage (233 Maxim Road) – Southern Asphalt Tie-Down Area

    Two former 10,000-gallon potential AvGas 100LL USTs (history unknown) were located southeast of the CAA Maintenance Garage. UST closure reports or sampling data were not observed.

16. Former Fuel Oil UST

    Location: CAA Maintenance Garage (233 Maxim Road) – West of Demolished Former Fire and Resource Office

    A former fuel oil UST was reportedly located west of the demolished structure. A UST closure report or sampling data was not observed.

17. Former (2) 10,000-Gallon Jet-A USTs

Location: CAA Maintenance Garage (233 Maxim Road) – Southern Turf/Asphalt Area

Two former 10,000-gallon potential Jet-A USTs (history unknown) were located southwest of the CAA Maintenance Garage. UST closure reports or sampling data were not observed.

18. Former 10,000-Gallon UST (A1)

    Location: FBO Hangar H1 (20 Lindbergh Drive) – Northern Turf/Asphalt Area

    The former 10,000-gallon UST (noted only as gasoline) was installed in either 1950 or 1973 and removed in 1983. The UST was identified with "Parcel F" of the Site. A UST closure report or sampling data was not observed.

19. FBO Fuel Farm Drainage Holding UST

    Location: FBO Fuel Farm – Northwest of Hangar H1

    A holding tank is reportedly connected to a catch basin located within the northern ramp area. A second catch basin within the concrete containment area is also believed to connect to the holding tank. A petroleum sheen was observable on the water surface within each catch basin. A slight petroleum odor was noticeable in the area of the ASTs. The service history (pumping or cleaning the tank) was not observed. If the tank is compromised or not properly functioning, a release to the surrounding area could occur.

20. Potential Former Location (6) 6,000-Gallon AvGas 100LL and Jet-A USTs (A1 through A6)

    Location: FBO Fuel Farm – Northwest of Hangar H1 and South of FBO Fuel Farm

    Six former 6,000-Gallon USTs were reportedly installed in 1950 and removed in 1983. UST closure reports or sampling data were not observed.

21. Former 250-Gallon Waste Oil UST (W1)

    Location: CAA Maintenance Garage (233 Maxim Road) – Southeast Turf/Asphalt Area

    The former 250-gallon waste oil UST was installed in 1965 and removed in 1988. A UST closure report or sampling data was not observed.

22. Potential Former 10,000-Gallon AvGas 100LL and 10,000-Gallon Jet-A USTs

    Location: FBO Hangar H1 (20 Lindbergh Drive) – Northwestern Turf Area

    Two potential 10,000-gallon ASTs were reportedly located northwest of the building. UST closure reports or sampling data were not observed.

23. Potential Former Location (4) 6,000-Gallon Jet-A USTs and (2) 6,000-Gallon AvGas 100 LL USTs (A1 through A6)

    Location: FBO Hangar H1 (20 Lindbergh Drive) – North of Building in Concrete Area

    The area north of the building below the current concrete pad is the second potential location determined for USTs A1 through A6 (AOC-2 No. 20). UST closure reports or sampling data were not observed.

24. Potential Former Location 8,000-Gallon UST and 4,000-Gallon UST and Associated Dispenser

Location: FBO Hangar H2 – East and North of Building

A sketch of the tanks and associated dispenser was depicted at a hangar occupied by Corporate Air in 1984 however, the orientation of the building and taxiway do not align with the directional compass. While the location of this area is likely east of H2, it is also possible along the northern building exterior. UST closure reports or sampling data were not observed.

25. Potential Former Location 8,000-Gallon UST and 4,000-Gallon UST and Associated Dispenser

    Location: FBO Hangar H3 – East and North of Building

    The area east and north of the building is the second potential location determined for the 8,000-gallon and 4,000-gallon USTs and dispenser. A figure from 1997 depicts a fuel pump south of the tanks that may coincide with the 1984 sketch. UST closure reports or sampling data were not observed.

26. Potential Former Location (3) 4,000-Gallon USTs (B2 through G7) and Hydrant Dispenser

    Location: FBO Hangar H2 – South of Building

    A former location of at least three 4,000-gallon gasoline USTs and hydrant dispenser were depicted south of the building. UST closure reports or sampling data were not observed.

27. Potential Former Location (3) 4,000-Gallon USTs (B2 through G7) and Hydrant Dispenser

    Location: FBO Hangar H4 – Northeast of Building

    The area northeast of the building is the potential location another three 4,000-gallon gasoline USTs and hydrant dispenser. UST closure reports or sampling data were not observed.

28. Potential Former Fuel Farm

    Location: FBO Hangar H3 – East of Building

    The area east of H3 was identified on a historic figure depicting "fuel farm". UST closure reports or sampling data were not observed.

AOC-3: Aboveground Storage Tanks (twelve locations)

The Site has utilized numerous known ASTs. The State of Connecticut does not currently maintain a list of registered ASTs. It is likely additional ASTs have been utilized on the Site beyond those identified below. Potential spills and releases may have occurred to the ground surface during material transfer and/or from leaking tanks and piping.

1. Former ~275-Gallon Waste Oil AST

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Asphalt Lot

   Located southeast of the building at 269 Maxim Road adjacent to the fence.

2. Former Waste Oil AST (size unknown)

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Gravel Lot

TRC identified a waste oil AST within or near a former hazardous waste storage container located in the northwest corner of the gravel parking lot.

3. Former Waste Oil AST (size unknown)

   Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Gravel Lot

   An AST labeled "abandoned" was observed to in the southern portion of the gravel parking lot and west of the former UST(s) (A1/B1/C2/C2R1) location.

4. FBO Fuel Farm 12,000-Gallon AvGas 100LL AST, 12,000-Gallon Jet-A AST, ~300-Gallon Diesel AST, and ~500-Gallon Gasoline AST

   Location: FBO Fuel Farm – Northwest of Hangar H1

   A fuel farm is located within a concrete containment in the northwest portion of the Site. A slight petroleum odor was detected within the containment area. Black staining was observed around the northern portion of the containment area. Black staining was also notable around the diesel AST.

5. Former (2) 250-Gallon ASTs

   Location: FBO Fuel Farm – Western Area

   Two former 250-gallon ASTs (content and history unknown) were reportedly located west of the current FBO Fuel Farm.

6. Former 250-Gallon Waste Oil AST

   Location: FBO Hangar H1 (20 Lindbergh Drive) – Northwest Corner of Building Exterior

   A former 250-gallon waste oil AST (history unknown) was reportedly located northwest of the FBO Hangar H1.

7. Former (2) 275-Gallon Waste AvGas 100LL ASTs

   Location: FBO Hangar H1 (20 Lindbergh Drive) – Northwest Corner of Building Exterior

   Two former 275-gallon waste AvGas 100LL ASTs (history unknown) were reportedly located northwest of the building.

8. 250-Gallon Waste Oil AST

   Location: FBO Hangar H3 – Northwest Corner of Building Exterior

   The 250-gallon waste oil AST was observed within a metal containment at the northwest corner of the building. Minor black staining was previously noted on the asphalt surface beneath the fill port (eastern end of the tank).

9. Former (3) ASTs (size and contents unknown)

   Location: FBO Hangar H3 – North Asphalt Area

   Three ASTs (history unknown) were depicted north of the building.

10. CAA Fuel Farm Compartmentalized 1,000-Gallon Gasoline/1,000-Gallon Diesel AST and Dispensers

    Location: CAA Fuel Farm – South of CAA ARFF

One compartmentalized double-walled steel/concrete AST was located south of the CAA ARFF and northeast of the FBO Fuel Farm. The tanks and dispensers were installed around 2013.

11. ~275-Gallon West Oil AST

    Location: FBO Hangar H2 – Northeast Interior of Hangar

    One AST was observed in a containment in the northeast corner of the hangar.

12. (2) ~200-Gallon ASTs (contents unknown)

    Location: FBO Hangar H2 – North of Building

    Two unlabeled ASTs appeared to be stored at the northern exterior of the hangar. The use or history of each AST is unknown.

AOC-4: Former Hazardous Waste Storage Container

Location: State Police/Urban Search and Rescue (269 Maxim Road) – Gravel Lot

TRC identified a former hazardous waste storage container in 2012 in the northwestern corner of the lot, adjacent to the fence and vehicle wash station. It's unknown when the container was removed from the Site or if other satellite areas existed.

AOC-5/REC-3: Former Fuel Distribution Boxes and Product Delivery Line

Location: State Police/Urban Search and Rescue (269 Maxim Road) – Southern Asphalt Ramp

A former fuel line was depicted south-southeast of the building. In 1990, fuel box (1) was the noted as the origination of a leak. Based on soil analytical results collected on September 14, 17, and 19, 1990, low level petroleum impacts remained in place below RSR criteria. Groundwater was not assessed at the time of the incident. Current soil and groundwater conditions are unknown.

AOC-6: Oil/Water Separator (eight locations)

A total of eight oil/water separators (seven current and one former) have been identified at the Site. Releases to soil and/or groundwater can occur if the systems become compromised or overflows.

1. Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Gravel Lot (north of vehicle wash station)

   As noted in the 2012 Phase I ESA, drainage from the vehicle wash station is directed towards the oil/water separator.

2. Location: CAA Maintenance Shop (239 Maxim Road) – Eastern Asphalt Lot

3. Location: FBO Hangar H1 (20 Lindbergh Drive) – Below Hangar

   The oil/water separator is believed to be located in the southeast corner of the building footprint. A possible cleanout/access to the unit was observed during the Site reconnaissance in this area. A figure from 2005 documented the unit below the northeast corner of the building. The 2018 SPCC report documented the unit below the concrete pad north of the building. Therefore, the location of the unit needs to be verified.

4. Location: FBO Hangar H3 (58 Lindbergh Drive) – Northwest of Hangar

The current oil/water separator is located adjacent to the fence within the asphalt parking lot located northwest of H3. Hangar H2 is reportedly connected to this unit.

5. Location: FBO Hangar H3 (58 Lindbergh Drive) – Southwest of Current Oil/Water Separator

   A former oil/water separator is located immediately southwest of the current unit. The history, potential abandonment or potential removal of the unit was not observed.

6. Location: FBO Hangar H4 – North of Hangar
7. Location: CT Aero Tech School (500 Lindbergh Drive) – South of Hangar
8. Location: CAA ARFF (4 Maxim Road) – South of Building

AOC-7: Airport Maintenance Facility (three locations)

Three buildings are utilized by the CAA for airport maintenance. Maintenance operations involve the storage, use, and disposal of petroleum products, solvents, paints, fuel, pesticides, or other potential contaminants.

1. Location: CAA Maintenance Shop (239 Maxim Road)

   This building has been utilized for maintenance for approximately a century.

2. Location: CAA Maintenance Garage (233 Maxim Road)

   This building has been utilized for maintenance for approximately a century. Black staining was observed to the concrete below the compressor. Minor black staining was also observed in the northern portion of the garage.

3. Location: CAA ARFF (4 Maxim Road)

   This building has been utilized for maintenance for approximately a decade. Black staining was observed on the concrete in the northern electrical room, as well as around a floor drain in the furnace room.

AOC-8: Aircraft Maintenance and Repair Facility (five locations)

Multiple buildings on the Site are currently or may have been formerly utilized for aircraft maintenance and repair. Each hangar involves the storage, use, and disposal of petroleum products, solvents, paints, fuel, or other potential contaminants.

1. Location: State Police/Urban Search and Rescue (269 Maxim Road)

   While the hangar does not appear to be currently utilized for aircraft maintenance and repair, the building was originally constructed in the late 1930s for the National Guard as a military hangar. Black staining was observed on the concrete around a floor drain in the eastern portion of the building. The military has had a historic presence on the Site from approximately 1923 to 1945. The Site is also listed for environmental interest on the Former Use Defense (FUD) and Unexploded Munition Ordnance (UXO) databases.

2. Location: FBO Hangar H1 (20 Lindbergh Drive)

   The hangar contains multiple aircraft that appear to be undergoing maintenance or repairs. 20 Lindbergh Drive has been recognized as a historic auto hangar. A machine shop is located in the eastern portion of the hangar on the first floor. Black staining was observed around the southeasternmost floor drain, as well as

the concrete around the compressor. Staining and corrosion was observed to the bottom of a flammable cabinet located centrally at the western wall.

3. Location: FBO Hangar H2

   The hangar contains multiple aircraft that appear to be undergoing maintenance or repairs. Minor black staining was observed in the southeast corner of the hangar.

4. Location: FBO Hangar H3 (58 Lindbergh Drive)

   The hangar contains multiple aircraft that appear to be undergoing maintenance or repairs. 58 Lindbergh Drive has been recognized as a historic auto hangar. Minor black staining was observed in the northeast corner of the hangar.

5. Location: FBO Hangar H4

   The hangar appears to be currently utilized for storing aircraft.

AOC-9: Aircraft Deicing

According to the 2018 SPCC, aircraft deicing operations occur mainly south of the FBO Hangar H1 in the asphalt ramp area. Deicing fluids can be contaminated with 1,4-Dioxane. Smaller deicing operations likely could have occurred on the ramps outside of each hangar as well.

AOC-10: Fuel Truck Parking (three locations)

Fuel trucks were observed at Site and are known to have been historically used to fuel aircraft. Potential releases could have occurred during fueling operations and/or from leaking equipment. Areas of outside long-term storage of fuel trucks represents a concern for releases.

1. Location: FBO Hangar H1 (20 Lindbergh Drive) – Eastern Asphalt Lot

   Historically, multiple fuel trucks are kept parked in this area of the Site.

2. Location: FBO Hangar H3 (58 Lindbergh Drive) – Northeastern Asphalt Lot

   This area was reportedly a historical fuel truck parking area.

3. Location: FBO Hangar H2 – North of Building

   A fuel truck was parked/stored adjacent to the northern building exterior.

AOC-11: T-Hanger Buildings (five adjacent locations)

T-Hangars are used by private individuals for the storage of their aircraft. Although restricted, minor maintenance or repair, washing, and deicing activities may have occurred. The T-Hangars are located south of H4. Minor black staining was observed to the concrete in both Unit 9 and Unit 14 in the 240 Lindbergh T-Hangar observed during the Site reconnaissance. Minor quantities of various petroleum products, paints, solvents, etc. were also observed.

AOC-12: CT Aero Tech School

The aviation school has been a Site occupant since 2008, providing hands-on mechanical experience to students. The school includes the storage, use, and disposal of petroleum products, solvents, paints, fuel, or other potential contaminants. A walk-in paint booth, wall unit paint booth, and a composite room exist in the southern portion of the school. The school includes an engine test building located southeast of the main structure where various engines and chemical storage was observed.

AOC-13/REC-4: Soil and Groundwater Impacts from Historical Airport Activities and/or Historical Fill Utilized at the Site

A Task 210 was completed for the northwestern portion of the Site in 2011 to support the construction of the current CAA ARFF. Low level concentrations of ETPH, VOC, and/or SVOCs were detected in multiple soil borings at depths ranging from one to three ftbgs or four to eight ftbgs. Based on the soil and groundwater results, and numerous reported LUSTs on the Site, the entire project limits were designated as an area of environmental concern.

In addition, pesticides, which may have contained lead and arsenic, are known to have been used at the Site. Pesticides are currently used and stored at the Site.

AOC-14: Electrical Transformers (multiple locations)

Transformers containing dielectric fluids were noted at several locations at the Site. It is possible that these transformers or historical transformers utilized PCB-containing fluids that could have released. Tighe & Bond noted the following transformer locations that appear to be within the Site limits: It should be noted that other utility poles containing pole-mounted transformers were observed along Maxim Road. Although likely off-Site, the exact Site limits could not be determined in the field.

1. Location: Maxim Road near CAA Maintenance Shop (239 Maxim Road)

   A pole-mounted transformer exists on a utility pole on Maxim Road adjacent to the building. A PCB label was not observed on any of the units.

2. Location: State Police/Urban Search and Rescue (269 Maxim Road) – East of Building at Parking Lot Fence

   A pad-mounted transformer is located adjacent to gravel parking lot entrance. Three pole-mounted transformers are located on the utility pole nearby. A PCB label was not observed on any of the units.

3. FBO Hangar H1 (20 Lindbergh Drive) – Southeastern Exterior

   A pad-mounted transformer is located adjacent to the building. A PCB label was not observed.

4. FAA Control Tower – Southern Exterior

   A pad-mounted transformer is located adjacent to the building. A PCB label was could not be observed.

5. Location: CT Aero Tech School (500 Lindbergh Drive) – South of Building

   A pad-mounted transformer is located adjacent to the building. A PCB label indicating less than 2 ppm dielectric fluid was observed.

6. Location: CAA ARFF (4 Maxim Road) – West of Building

   A pad-mounted transformer is located adjacent to the building in the northwest corner of the Site. A PCB label indicating less than 2 ppm dielectric fluid was observed.

7. CAA Electrical Vault – Southern Exterior

   A pad-mounted transformer is located adjacent to the building. A PCB label was not observed.

AOC-15: Diesel Generators (four locations)

1. Location: State Police/Urban Search and Rescue (269 Maxim Road) – East of Building

   A defunct diesel generator with an underbelly tank was observed adjacent to the building in the eastern parking lot.

2. Location: CT Aero Tech School (500 Lindbergh Drive) – South of Building

   A diesel generator with an underbelly tank was observed south of the asphalt parking lot adjacent and near the CAA Electrical Vault.

3. Location: CAA Electrical Vault – South of CT Aero Tech School

   A diesel generator with an underbelly tank was observed immediately southeast of the CT Aero Tech School generator.

4. Location: CAA ARFF (4 Maxim Road) – West of Building

   A diesel generator with an underbelly tank was observed immediately west of the building in the northwest portion of the Site.

AOC-16: Dumpsters (seven locations)

Disposal areas are viewed as an AOC due to the potential for petroleum products, solvents, or other containments to be placed in the containers. Wrongful use or illegal dumping is also a concern for the area.

1. Location: FBO Hangar H1 (20 Lindbergh Drive) – Northern Exterior Area

   A solid waste dumpster was observed in the turf/asphalt area north of the concrete pad of H1.

2. Location: FBO Hangar H1 (20 Lindbergh Drive) – Northwestern Exterior Area

   A former dumpster was observed in the asphalt parking lot located northwest of H1 outside of the fenced perimeter.

3. Location: FBO Hangar H3 (58 Lindbergh Drive) – Northwest Asphalt Lot

   Three solid waste dumpsters were observed in the parking lot northwest of the hangar outside of the fenced perimeter.

4. Location: FAA Control Tower – Western Exterior North of Asphalt Entrance

   A solid waste dumpster was observed in the turf area north of the asphalt entrance.

5. Location: CT Aero Tech School (500 Lindbergh Drive) – Southwest of Building

   A solid waste dumpster was observed in the asphalt parking lot southeast of the school.

6. Location: CAA ARFF (4 Maxim Road) – Southeast of Building

   A solid waste dumpster was observed in the turf area southeast of the building.

7. Location: State Police/Urban Search and Rescue (269 Maxim Road) – Eastern Gravel Lot

   Two solid waste dumpsters were observed in the northwest corner of the gravel lot. Two larger, approximately 40-cubic yard solid water dumpsters were observed nearby just east of the vehicle wash station.

AOC-17: Main Regional Jet Fuel Supply Line

A jet fuel valve was identified along the toe of the Clark Dike. The 2012 TRC report states the pipeline enters the Site from the south and then exists the airport property to the north.

AOC-18: Soil Pile

A soil pile is located east of the abandoned structure. Various wood debris was observed around the pile. Several empty metal drums were observed near the pile at the northeast corner of the fence.

AOC-19: Potential Surficial Impacts From Hazardous Building Materials (past and present building envelopes)

Multiple HBMA reports were observed for the Site documenting the presence of lead, ACM, and PCB materials at some of the northern structures, including the razed former Fire Rescue Office located off the southwest corner of the CAA Maintenance Garage. Leaching or deterioration of HBM can directly impact surrounding soils. In addition, pesticides could have been applied along foundations.

Demolition of former buildings could have released hazardous building materials.

AOC-20: Aqueous Film-Forming Foam (six locations)

Aqueous film-forming foam (AFFF) is an AOC due to the presence of per- and polyfluoroalkyl substances (PFAS).

1. Location: CAA Maintenance Shop (239 Maxim Road) – Southern Bay

   A fire truck known to have a 40-gallon tank containing AFFF parked in the southern bay.

2. Location: CAA Maintenance Shop (239 Maxim Road) – Northern Bay

   A 5-gallon container labeled AFFF (apparently empty) was observed stored centrally in the northern bay on the concrete.

3. Location: CAA Maintenance Garage (233 Maxim Road) – Western Exterior

   A fire truck is parked at the western exterior of the garage that formerly held AFFF.

4. Location: CT Aero Tech School (500 Lindbergh Drive) – Southern Utility Area – Fire Suppression Room

   Two 3,028-gallon ASTs of AFFF are located in the southern utility room connected to the school fire suppression system. Two 55-gallon drums of AFFF were observed stored adjacent to the two ASTs.

5. Location: CAA ARFF – Southern Bay

   At least five 55-gallon drums of AFFF stored on pallets was observed in the northern portion of the bay. Numerous 5-gallon containers labeled AFFF (presumed empty/residuals) were observed nearby on a metal pallet.

6. Location: Unknown – Associated with Aircraft Accidents

   Multiple aircraft accidents have been associated with the airport. PFAS were patented in firefighting foam in 1963 and at least three planes have been recorded at the Site since 1970 and therefore AFFF may have been utilized.

AOC-21/REC-5: Aircraft Accidents

Limited information was available regarding the history of aircraft incidents that have occurred at or near the Site. The following table includes dates and limited information compiled from news reporting and emergency reports.

Date	Incident Description	Additional Information
8/29/1928	Plane crash near landing	Not Observed
9/1928	Plane struck a fence	
1/31/1970	Two plane collision into Connecticut River and East Hartford	The incident was recorded off-site.
11/28/1978	Plane exploded approximately 300 feet off the runway after taking off	Incident is likely considered off-site.
8/17/1993	Plane crash in Connecticut River	The incident was recorded off-site.
8/30/1993	Plane crash	Not Observed
11/30/1997	Plane accident	
2/9/2000	Two planes hit on the runway	Not Observed
1/28/2023	Plane crash	According to CAA personnel, only water was utilized during the plane crash on January 28, 2023. Environmental Services, Inc. collected surficial soil soils on February 7th after two roll-off containers of soil was excavated from the area. A summary of the work has not yet been received by the CAA.

AOC-22: Former Police Firing Range

A former police pistol range was depicted on a 1936 figure in the southern portion of the property when the airport.

AOC-23: Outfalls at Connecticut River (two locations)

Two outfalls are reportedly located along the Connecticut River. Runoff from exterior portions of the Site discharge at one of two outfalls located beyond the Site limits, along the Connecticut River. COCs associated with airport operations may impact soil and surface water at these locations.

1. North Outfall – East of the North End of Runway 2-20

2. South Outfall – Off Southeast Corner of Site

Off-site AOC: Potentially Impacted Groundwater Migrating to the Site from Off-Site Sources

Based on historical information, interviews, and information observed through EDR environmental databases, the following surrounding properties present a potential environmental concern to Site soils and/or groundwater.

1. Eastern Adjacent Parcel – Clark Dike
2. Eastern Surrounding Area – Connecticut River
3. Northern Adjacent Parcel – Materials Innovation and Recycling Authority
4. Southern Adjacent Parcel – Metropolitan District Commission Wastewater Treatment Plant
5. Western Adjacent Parcels – Various Commercial Properties

The results of this assessment have not revealed **Controlled Recognized Environmental Conditions (CRECs)** associated with the subject Site.

The results of this assessment have not revealed **Historical Recognized Environmental Conditions (HRECs)** associated with the subject Site.

The results of this assessment have revealed the following **Business Environmental Risks (BERs)** associated with the subject site.

BER-1 Hazardous Building Materials

Based on the age of several of the Site, and prior HBMA reports, hazardous building materials including lead, asbestos, and PCBs are known to be present. Prior to any renovations or potential demolition, a hazardous building material assessment should be conducted.

8.2 CT Property Transfer Act

Pursuant to the Connecticut Property Transfer Act (CTA), Conn. Gen. Stat. §§ 22a-134, et. seq. (the "Transfer Act"), an "Establishment" is defined as any real property at which or any business operation from which (A) on or after November 19, 1980, there was generated more than one hundred kilograms of hazardous waste in any one month, except as the result of (i) the one-time generation of such hazardous waste or (ii) one or more of the following: (I) the remediation of polluted soil, groundwater or sediment, (II) the removal or abatement of building materials, (III) the removal of unused chemicals or materials as a result of the emptying or clearing out of a building, or (IV) the complete cessation of business operation; (B) hazardous waste generated at a different location was recycled, reclaimed, reused, stored, handled, treated, transported or disposed of; (C) the process of dry cleaning was conducted on or after May 1, 1967; (D) furniture stripping was conducted on or after May 1, 1967; or (E) a vehicle body repair facility was located on or after May 1, 1967.

Based on the findings of this Phase I ESA, the Site appears to meet the definition of an "Establishment" due to multiple generations of hazardous waste (D001-Ingitable Waste) over 100kg in one month and the identification of historic aircraft maintenance and repair facilities.

Section 9
Opinion

Tighe & Bond identified 5 RECs and 23 AOCs for the Site during the performance of this Phase I ESA. Based on current and historical Site conditions, environmental impacts to the underlying soil and/or groundwater are likely present. Tighe & Bond recommends the completion of a Phase II Environmental Site Assessment (ESA) to further evaluate previously identified impacts to soil and groundwater and to evaluate impacts to the environment associated with RECs/AOCs that have not previously been investigated.

Also, as detailed in Section 8.2, the Site appears to meet the definition of an "Establishment" as defined in the Connecticut Property Transfer Act. Whether the Transfer Act applies to the sale of a property, or a business is a legal issue and therefore it is recommended that environmental legal counsel be consulted prior to transfer of the property or business.

9.1 Data Gaps

Based upon Tighe & Bond's research in an attempt to satisfy all the requirements set forth in the ASTM Phase I Standard and the SCGD, the following data gaps were encountered:

- A User Questionnaire was not completed; however, due to the information obtained during the completion of this Phase I ESA and the level of research completed, this data gap has been fully addressed.
- Tighe & Bond was unable to access the interior of the Administration Building located at 251 Maxim Road. The CAA provided an HBMA report for review and a walkthrough video of the property from 2020. Based on the prior assessment by TRC in 2012, and the recent HMBA survey, this data gap is not considered significant.
- Tighe & Bond was unable to access the interior of the FAA Control Tower on the day of the Site reconnaissance. Based on the prior assessment by TRC in 2012, this data gap is not considered significant.
- Tighe & Bond did not receive a response from the Connecticut Historical Society prior to the completion of this report. Available historical information was reviewed through the EDR report and various municipal offices and therefore this data gap is not considered significant.
- Following a meeting with the City of Hartford Department of Public Works on March 24th, additional hangar files and water sampling of the Clark Dike toe swale were discussed. The files were not provided for Tighe & Bond to review prior to the completion of this report. The historical hangars as well as the Clark Dike has already been identified for potential environmental impacts and therefore this data gap is not considered significant.
- Tighe & Bond did not receive a response from the US Army Core of Engineers prior to the completion of this report. Information related to the Department of Defense use in the 1940s and the listing under an unexploded munition ordinance is deemed a data gap.

Section 10
Signature of Environmental Professional

As required by 40 CFR 312.21(d), the Phase I ESA report shall include the following statements of the environmental professional(s) responsible for conducting the Phase I ESA and preparation of the report.

I declare that, to the best of my professional knowledge and belief, I, James Olsen, meet the definition of Environmental Professional as defined in §312.10 of this part (40 CFR 312). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. I have developed and *performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.*

AREAS OF CONCERN/RECOGNIZED ENVIRONMENTAL CONDITION

AOC # / REC #	DESCRIPTION
REC-1	HISTORICAL RELEASES (DEVELOPED PORTIONS OF THE SITE)
AOC-1	HISTORICAL HANGAR OPERATIONS (TWO LOCATIONS)
AOC-2/REC-2	UNDERGROUND STORAGE TANKS (TWENTY-EIGHT LOCATIONS)
AOC-3	ABOVEGROUND STORAGE TANKS (TWELVE LOCATIONS)
AOC-4	FORMER HAZARDOUS WASTE STORAGE CONTAINER
AOC-5/REC-3	FORMER FUEL DISTRIBUTION BOXES AND PRODUCT DELIVERY LINE
AOC-6	OIL/WATER SEPARATOR (EIGHT LOCATIONS)
AOC-7	AIRPORT MAINTENANCE FACILITY (THREE LOCATIONS)
AOC-8	AIRPORT MAINTENANCE AND REPAIR FACILITY (FIVE LOCATIONS)
AOC-9	AIRCRAFT DEICING
AOC-10	FUEL TRUCK PARKING (THREE LOCATIONS)
AOC-11	T-HANGAR BUILDINGS (FIVE TOTAL)
AOC-12	CT AERO TECH SCHOOL
AOC-13/REC-4	SOIL AND GROUNDWATER IMPACTS FROM HISTORICAL AIRPORT ACTIVITIES AND/OR HISTORICAL FILL UTILIZED AT THE SITE
AOC-14	ELECTRICAL TRANSFORMERS (MULTIPLE LOCATIONS)
AOC-15	DIESEL GENERATORS (FOUR LOCATIONS)
AOC-16	DUMPSTERS (SEVEN LOCATIONS)
AOC-17	MAIN REGIONAL JET FUEL SUPPLY LINE
AOC-18	SOIL PILE
AOC-19	POTENTIAL SURFICIAL IMPACTS FROM HAZARDOUS BUILDING MATERIALS (PAST AND PRESENT BUILDING ENVELOPES)
AOC-20	AQUEOUS FILM-FORMING FOAM (SIX LOCATIONS)
AOC-21/REC-5	AIRCRAFT ACCIDENTS
AOC-22	FORMER POLICE FIRING RANGE
AOC-23	OUTFALLS AT CONNECTICUT RIVER (TWO LOCATIONS)
OFF-SITE AOC	POTENTIALLY IMPACTED GROUNDWATER MIGRATING TO THE SITE FROM OFF-SITE SOURCES

APPENDIX A

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — State Police/Urban Search and Rescue (Former National Guard)

Photograph No.: 1	**Date:** 3/6/2023	**Direction Taken:** Southwest
Description: View of asphalt lot located east of the building at 269 Maxim Road. A former UST area is located adjacent to the fence and the building exterior in the background.		

Photograph No.: 2	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of asphalt lot located east of the building at 269 Maxim Road. A former UST area is located adjacent to the fenced utility area in the background. A monitoring well is located in the foreground.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — State Police/Urban Search and Rescue (Former National Guard)

Photograph No.: 3	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of the northern building exterior located at 269 Maxim Road.		

Photograph No.: 4	**Date:** 3/6/2023	**Direction Taken:** Southeast
Description: View of the western building exterior located at 269 Maxim Road.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — State Police/Urban Search and Rescue (Former National Guard)

Photograph No.: 5	**Date:** 3/6/2023	**Direction Taken:** Northwest
Description: View of the eastern building exterior located at 269 Maxim Road.		

Photograph No.: 6	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of the hangar located at 269 Maxim Road.		

Photograph No.: 7	**Date:** 3/6/2023	**Direction Taken:** Southwest
Description: View of derelict diesel generator located at the eastern exterior of 269 Maxim Road.		

Photograph No.: 8	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of asphalt ramp area located south of 269 Maxim Road. A former UST and former fuel distribution line was documented in this area.		

Photograph No.: 9	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of surrounding asphalt and turf area. The CAA Maintenance Garage is located in the background.		

Photograph No.: 10	**Date:** 3/6/2023	**Direction Taken:** East
Description: View of surrounding asphalt area. The CAA Sand Shed is located on the left. The Clark Dike is visible in the background.		

Photograph No.: 11	**Date:** 3/6/2023	**Direction Taken:** Southeast
Description: View of surrounding asphalt and runway 2-20.		

Photograph No.: 12	**Date:** 3/6/2023	**Direction Taken:** Southwest
Description: View of surrounding asphalt and tie down areas. The FBO Hangar H1 is located in the background. Former USTs were documented in this general area.		

Photograph No.: 13	**Date:** 3/6/2023	**Direction Taken:** North
Description: Interior view of the hangar at 269 Maxim Road currently utilized for vehicle and equipment storage.		

Photograph No.: 14	**Date:** 3/6/2023	**Direction Taken:** West
Description: Black staining observed around the floor drain in the basement furnace room.		

Photograph No.: 15	**Date:** 3/6/2023	**Direction Taken:** North
Description: Typical flammable cabinet contents observed at the Site.		

Photograph No.: 16	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of solid waste storage adjacent to the vehicle wash station. A former UST, former hazardous waste storage container, and former AST were documented in this area.		

Photograph No.: 17	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of concrete pad located north of the dumpsters. A former UST, former hazardous waste storage container, and former AST were documented in this area.		

Photograph No.: 18	**Date:** 3/6/2023	**Direction Taken:** Northeast
Description: View of solid waste storage adjacent to the vehicle wash station.		

Photograph No.: 19	**Date:** 3/6/2023	**Direction Taken:** Southwest
Description: View of the eastern gravel parking lot of 269 Maxim Road. Former USTs and an AST were documented in the area of the current storage containers.		

Photograph No.: 20	**Date:** 3/6/2023	**Direction Taken:** Southeast
Description: View of the northern portion of the gravel parking lot for 269 Maxim Road.		

Photograph No.: 21	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of the vehicle washing station located within the eastern gravel parking lot. An oil/water separator is reportedly located north of the structure.		

Photograph No.: 22	**Date:** 3/6/2023	**Direction Taken:** North
Description: Three pole-mounted and one pad-mounted transformers located in the eastern asphalt lot of 269 Maxim Road. A former AST was reportedly located nearby.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — Abandoned Structure

Photograph No.: 1	**Date:** 3/6/2023	**Direction Taken:** East
Description: Abandoned one-story structure located in the parking lot east of the State Police/ Urban Search and Rescue Building (269 Maxim Road).		

Photograph No.: 2	**Date:** 3/6/2023	**Direction Taken:** North
Description: Interior view of the building in a state of dilapidation.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — Abandoned Structure

Photograph No.: 3	**Date:** 3/6/2023	**Direction Taken:** North
Description: Soil pile and wood debris located east of the structure.		

Photograph No.: 4	**Date:** 3/6/2023	**Direction Taken:** East
Description: Northern area surrounding the structure with additional wood debris piles.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — Abandoned Structure

Photograph No.: 5	**Date:** 3/6/2023	**Direction Taken:** East
Description: The northeast corner within the fenced area had two-three metal drums stored on the ground.		

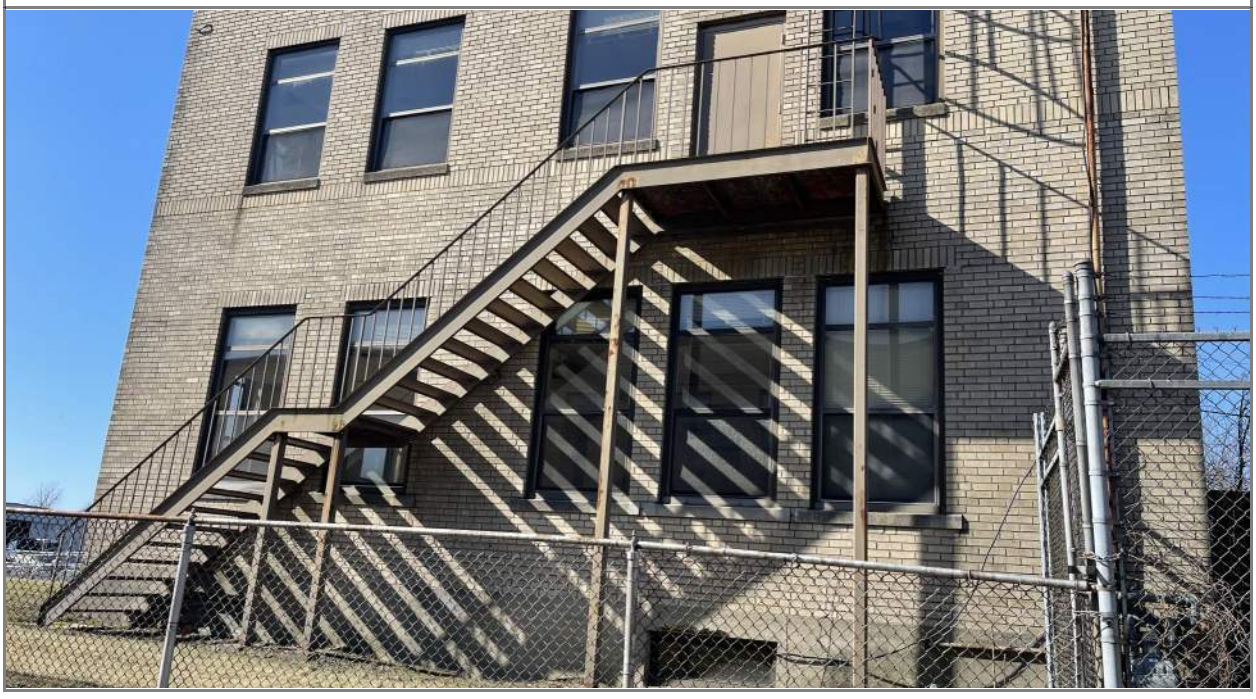
Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Administration

Photograph No.: 1	**Date:** 3/6/2023	**Direction Taken:** Southwest
Description: View of the eastern and northern building facades. USTs formerly existed in the turf area east of the building as well as north within the asphalt parking lot.		

Photograph No.: 2	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of the eastern building exterior.		



Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Administration

Photograph No.: 3	**Date:** 3/6/2023	**Direction Taken:** Northwest
Description: View of the eastern and southern building exterior. The CAA Maintenance Garage is visible in the background on the left.		

Photograph No.: 4	**Date:** 3/6/2023	**Direction Taken:** East
Description: View of the southern building exterior and surrounding asphalt and turf areas. The State Police/Urban Search and Rescue is visible in the background.		

Photograph No.: 5	**Date:** 3/6/2023	**Direction Taken:** Southeast
Description: View of the northern and western building exteriors. USTs formerly existed in the asphalt parking lot area.		

Photograph No.: 6	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of the northern asphalt parking lot where USTs may have been historically present.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Sand Shed

Photograph No.: 1	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of the southern building exterior and surrounding asphalt and turf areas.		

Photograph No.: 2	**Date:** 3/6/2023	**Direction Taken:** East
Description: View of the western building exterior and surrounding asphalt and turf areas.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Sand Shed

Photograph No.: 3	**Date:** 3/6/2023	**Direction Taken:** Northwest
Description: View of the eastern building exterior and stored equipment.		

Photograph No.: 4	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of the shed interior and sand storage.		

Photograph No.: 5	**Date:** 3/6/2023	**Direction Taken:** Northeast
Description: View of the eastern asphalt and turf area with stored equipment and material.		

Photograph No.: 6	**Date:** 3/6/2023	**Direction Taken:** East
Description: View of the eastern turf area and the Clark Dike in the background.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Sand Shed

Photograph No.: 7	**Date:** 3/6/2023	**Direction Taken:** South
Description: View of the turf runway and runway 2-20.		

Photograph No.: 8	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of the surrounding asphalt area. The FBO Hangar H1 is located in the background on the left.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Garage

Photograph No.: 1	**Date:** 3/6/2023	**Direction Taken:** Southeast
Description: View of the northern building exterior and adjacent to former UST locations in the asphalt lot.		

Photograph No.: 2	**Date:** 3/6/2023	**Direction Taken:** South
Description: View of the western building exterior.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Garage

Photograph No.: 3	**Date:** 3/6/2023	**Direction Taken:** Northeast
Description: View of the western building exterior and surrounding asphalt and turf areas. A fire truck that may have utilized AFFF is presently parked adjacent to the building.		

Photograph No.: 4	**Date:** 3/6/2023	**Direction Taken:** Northeast
Description: View of the western and southern building exteriors. A former office was demolished from the southwest corner of the building. USTs were formerly present in this asphalt area.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Garage

Photograph No.: 5	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of the eastern building exterior. A UST was formerly present in this area.		

Photograph No.: 6	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of the surrounding asphalt and turf area were USTs were formerly present.		

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Garage

Photograph No.: 7	**Date:** 3/6/2023	**Direction Taken:** Southwest
Description: View of the surrounding asphalt and turf areas. The FBO Fuel Farm is visible in the background.		

Photograph No.: 8	**Date:** 3/6/2023	**Direction Taken:** Southwest
Description: View of the surrounding asphalt and turf areas. A solid waste dumpster is visible in the background.		

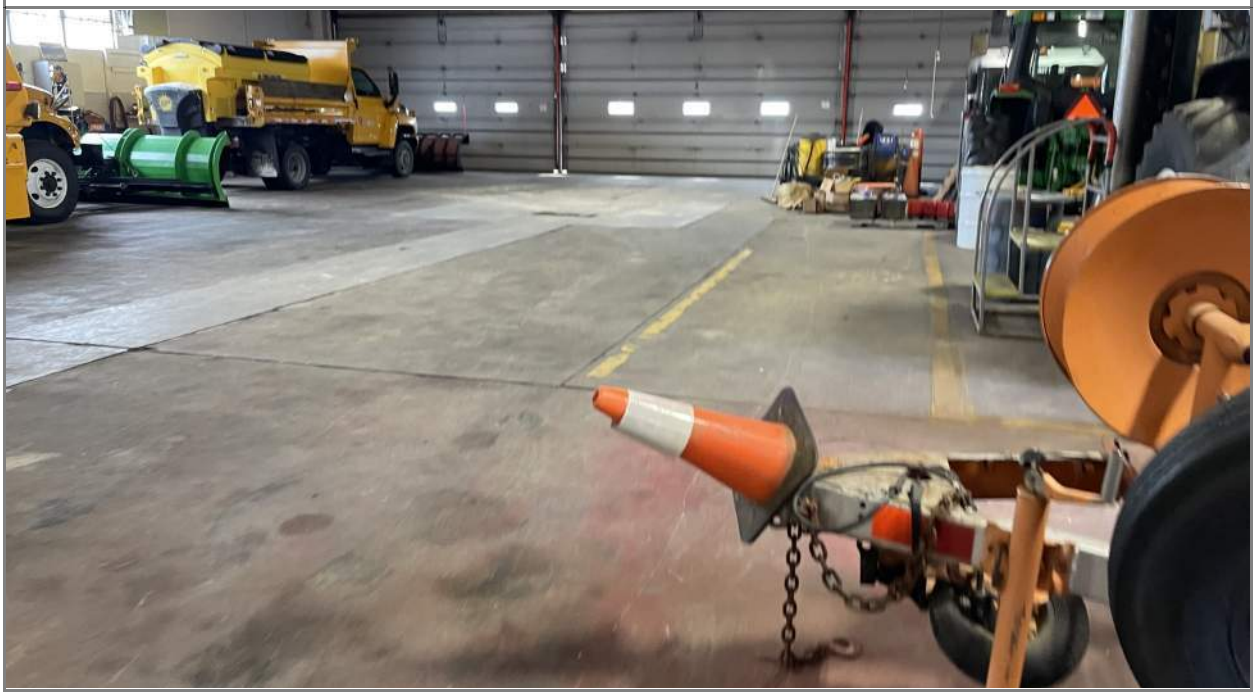
Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Garage

Photograph No.: 9	**Date:** 3/6/2023	**Direction Taken:** Southeast
Description: View of the surrounding asphalt and turf areas where USTs were formerly present.		

Photograph No.: 10	**Date:** 3/6/2023	**Direction Taken:** South
Description: View of the interior garage bay.		



Photograph No.: 11	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of chemical storage and parts washer located along the eastern interior wall.		

Photograph No.: 12	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of bulk paint storage and minor black staining to the concrete floor.		

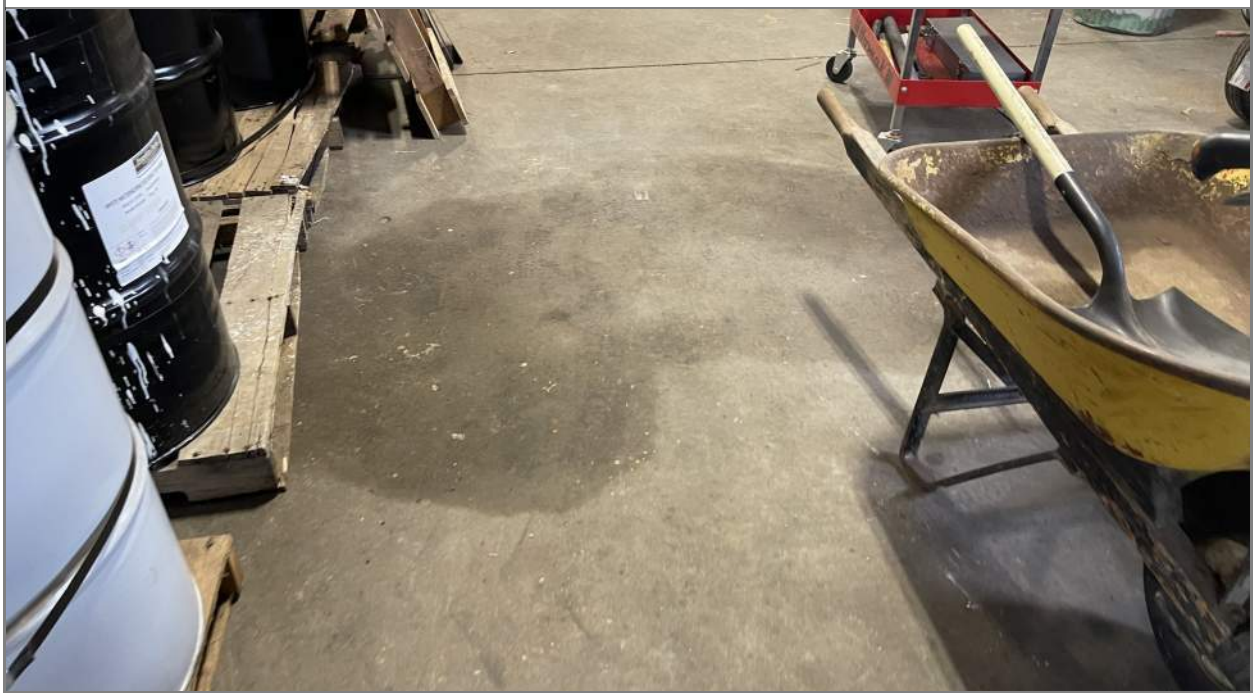
Photograph No.: 13	**Date:** 3/6/2023	**Direction Taken:** South
Description: View of asphalt sealant tank.		

Photograph No.: 14	**Date:** 3/6/2023	**Direction Taken:** North
Description: View of staining observed to the concrete floor in the northeastern portion of the garage.		

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Garage

Photograph No.: 15	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of staining observed on the concrete floor in the northern portion of the garage.		



Photograph No.: 16	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of typical flammable cabinets contents.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Shop

Photograph No.: 1	**Date:** 3/6/2023	**Direction Taken:** East
Description: View of the western and northern building exterior, surrounding asphalt and turf areas, and Maxim Road. USTs were formerly present north of the building.		

Photograph No.: 2	**Date:** 3/6/2023	**Direction Taken:** Northwest
Description: View of the eastern building exterior with vent pipes near the oil/water separator. A pole-mounted transformer is located nearby.		

Photographic Log

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Shop

Photograph No.: 3	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of the southern and eastern building exterior. A UST was formerly present south-west of the building.		

Photograph No.: 4	**Date:** 3/6/2023	**Direction Taken:** West
Description: View of the surrounding turf area where a UST was formerly present.		

Client: BFJ Planning **Job Number:** 12-5182-001

Site: Hartford-Brainard Airport — CAA Maintenance Shop

Photograph No.: 5	**Date:** 3/6/2023	**Direction Taken:** East
Description: View of the surrounding turf area with the CAA Administration building in the background.		

Photograph No.: 6	**Date:** 3/6/2023	**Direction Taken:** Northeast
Description: View of the oil/water separator located east of the building.

February 28, 1990

Mr. John Vendetta
Fire Marshal
Hartford Fire Department
275 Pearl Street
Hartford, Connecticut 06103

Dear Mr. Vendetta:

Subject: Removal of Aviation Fuel Tanks
Hartford/Brainard Airport, Maxim Road

It is our intention to remove six (6) 4,000 gallon and four (4) 10,000 gallon steel underground fuel storage tanks at the captioned location commencing on March 13, 1990.

If you have any questions regarding this installation, please call me at telephone number 566-5221.

Very truly yours,

William M. Hartigan

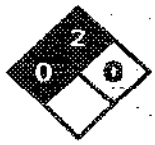
MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) including ULSD **MSDS No. 9909**

EMERGENCY OVERVIEW
CAUTION!
OSHA/NFPA COMBUSTIBLE LIQUID - SLIGHT TO MODERATE IRRITANT
EFFECTS CENTRAL NERVOUS SYSTEM
HARMFUL OR FATAL IF SWALLOWED

Moderate fire hazard. Avoid breathing vapors or mists. May cause dizziness and drowsiness. May cause moderate eye irritation and skin irritation (rash). Long-term, repeated exposure may cause skin cancer.
If ingested, do NOT induce vomiting, as this may cause chemical pneumonia (fluid in the lungs).



NFPA 704 (Section 16)

1. CHEMICAL PRODUCT AND COMPANY INFORMATION

Hess Corporation
1 Hess Plaza
Woodbridge, NJ 07095-0961

EMERGENCY TELEPHONE NUMBER (24 hrs): **CHEMTREC (800) 424-9300**
COMPANY CONTACT (business hours): Corporate Safety (732) 750-6000
MSDS INTERNET WEBSITE: www.hess.com (See Environment, Health, Safety & Social Responsibility)

SYNONYMS: Ultra Low Sulfur Diesel (ULSD); Low Sulfur Diesel; Motor Vehicle Diesel Fuel; Diesel Fuel #2; Dyed Diesel Fuel; Non-Road, Locomotive and Marine Diesel Fuel; Tax-exempt Diesel Fuel

See Section 16 for abbreviations and acronyms.

2. COMPOSITION and CHEMICAL INFORMATION ON INGREDIENTS

INGREDIENT NAME (CAS No.)	CONCENTRATION PERCENT BY WEIGHT
Diesel Fuel (68476-34-6)	100
Naphthalene (91-20-3)	Typically < 0.01

A complex mixture of hydrocarbons with carbon numbers in the range C9 and higher. Diesel fuel may be dyed (red) for tax purposes. May contain a multifunctional additive.

3. HAZARDS IDENTIFICATION

EYES
Contact with liquid or vapor may cause mild irritation.

SKIN
May cause skin irritation with prolonged or repeated contact. Practically non-toxic if absorbed following acute (single) exposure. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are repeatedly exposed.

INGESTION
The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death.

Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

INHALATION
Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

WARNING: the burning of any hydrocarbon as a fuel in an area without adequate ventilation may result in hazardous levels of combustion products, including carbon monoxide, and inadequate oxygen levels, which may cause unconsciousness, suffocation, and death.

CHRONIC EFFECTS and CARCINOGENICITY
Similar products produced skin cancer and systemic toxicity in laboratory animals following repeated applications. The significance of these results to human exposures has not been determined - see Section 11 Toxicological Information.

IARC classifies whole diesel fuel exhaust particulates as probably carcinogenic to humans (Group 2A). NIOSH regards whole diesel fuel exhaust particulates as a potential cause of occupational lung cancer based on animal studies and limited evidence in humans.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE
Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash).

4. FIRST AID MEASURES

EYES
In case of contact with eyes, immediately flush with clean, low-pressure water for at least 15 min. Hold eyelids open to ensure adequate flushing. Seek medical attention.

SKIN
Remove contaminated clothing. Wash contaminated areas thoroughly with soap and water or waterless hand cleanser. Obtain medical attention if irritation or redness develops.

INGESTION
DO NOT INDUCE VOMITING. Do not give liquids. Obtain immediate medical attention. If spontaneous vomiting occurs, lean victim forward to reduce the risk of aspiration. Monitor for breathing difficulties. Small amounts of material which enter the mouth should be rinsed out until the taste is dissipated.

INHALATION
Remove person to fresh air. If person is not breathing provide artificial respiration. If necessary, provide additional oxygen once breathing is restored if trained to do so. Seek medical attention immediately.

5. FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES:

FLASH POINT:	> 125 °F (> 52 °C) minimum PMCC
AUTOIGNITION POINT:	494 °F (257 °C)
OSHA/NFPA FLAMMABILITY CLASS:	2 (COMBUSTIBLE)
LOWER EXPLOSIVE LIMIT (%):	0.6
UPPER EXPLOSIVE LIMIT (%):	7.5

FIRE AND EXPLOSION HAZARDS
Vapors may be ignited rapidly when exposed to heat, spark, open flame or other source of ignition. When mixed with air and exposed to an ignition source, flammable vapors can burn in the open or explode in confined spaces. Being heavier than air, vapors may travel long distances to an ignition source and flash back. Runoff to sewer may cause fire or explosion hazard.

EXTINGUISHING MEDIA
SMALL FIRES: Any extinguisher suitable for Class B fires, dry chemical, CO2, water spray, fire fighting foam, or Halon.

LARGE FIRES: Water spray, fog or fire fighting foam. Water may be ineffective for fighting the fire, but may be used to cool fire-exposed containers.

FIRE FIGHTING INSTRUCTIONS

Small fires in the incipient (beginning) stage may typically be extinguished using handheld portable fire extinguishers and other fire fighting equipment.

Firefighting activities that may result in potential exposure to high heat, smoke or toxic by-products of combustion should require NIOSH/MSHA- approved pressure-demand self-contained breathing apparatus with full facepiece and full protective clothing.

Isolate area around container involved in fire. Cool tanks, shells, and containers exposed to fire and excessive heat with water. For massive fires the use of unmanned hose holders or monitor nozzles may be advantageous to further minimize personnel exposure. Major fires may require withdrawal, allowing the tank to burn. Large storage tank fires typically require specially trained personnel and equipment to extinguish the fire, often including the need for properly applied fire fighting foam.

See Section 16 for the NFPA 704 Hazard Rating.

6. ACCIDENTAL RELEASE MEASURES

ACTIVATE FACILITY'S SPILL CONTINGENCY OR EMERGENCY RESPONSE PLAN.

Evacuate nonessential personnel and remove or secure all ignition sources. Consider wind direction; stay upwind and uphill, if possible. Evaluate the direction of product travel, diking, sewers, etc. to confirm spill areas. Spills may infiltrate subsurface soil and groundwater; professional assistance may be necessary to determine the extent of subsurface impact.

Carefully contain and stop the source of the spill, if safe to do so. Protect bodies of water by diking, absorbents, or absorbent boom, if possible. Do not flush down sewer or drainage systems, unless system is designed and permitted to handle such material. The use of fire fighting foam may be useful in certain situations to reduce vapors. The proper use of water spray may effectively disperse product vapors or the liquid itself, preventing contact with ignition sources or areas/equipment that require protection.

Take up with sand or other oil absorbing materials. Carefully shovel, scoop or sweep up into a waste container for reclamation or disposal - caution, flammable vapors may accumulate in closed containers. Response and clean-up crews must be properly trained and must utilize proper protective equipment (see Section 8).

7. HANDLING and STORAGE

HANDLING PRECAUTIONS

Handle as a combustible liquid. Keep away from heat, sparks, and open flame! Electrical equipment should be approved for classified area. Bond and ground containers during product transfer to reduce the possibility of static-initiated fire or explosion.

Diesel fuel, and in particular low and ultra low sulfur diesel fuel, has the capability of accumulating a static electrical charge of sufficient energy to cause a fire/explosion in the presence of lower flashpoint products such as gasoline. The accumulation of such a static charge occurs as the diesel flows through pipelines, filters, nozzles and various work tasks such as tank/container filling, splash loading, tank cleaning; product sampling; tank gauging; cleaning, mixing, vacuum truck operations, switch loading, and product agitation. There is a greater potential for static charge accumulation in cold temperature, low humidity conditions.

Documents such as 29 CFR OSHA 1910.106 "Flammable and Combustible Liquids, NFPA 77 Recommended Practice on Static Electricity, API 2003 "Protection Against Ignitions Arising Out of Static, Lightning, and Stray Currents and ASTM D4865 "Standard Guide for Generation and Dissipation of Static

Electricity in Petroleum Fuel Systems" address special precautions and design requirements involving loading rates, grounding, bonding, filter installation, conductivity additives and especially the hazards associated with "switch loading." ["Switch Loading" is when a higher flash point product (such as diesel) is loaded into tanks previously containing a low flash point product (such as gasoline) and the electrical charge generated during loading of the diesel results in a static ignition of the vapor from the previous cargo (gasoline).]

Note: When conductivity additives are used or are necessary the product should achieve 25 picosiemens/meter or greater at the handling temperature.

STORAGE PRECAUTIONS

Keep away from flame, sparks, excessive temperatures and open flame. Use approved vented containers. Keep containers closed and clearly labeled. Empty product containers or vessels may contain explosive vapors. Do not pressurize, cut, heat, weld or expose such containers to sources of ignition.

Store in a well-ventilated area. This storage area should comply with NFPA 30 "Flammable and Combustible Liquid Code". Avoid storage near incompatible materials. The cleaning of tanks previously containing this product should follow API Recommended Practice (RP) 2013 "Cleaning Mobile Tanks In Flammable and Combustible Liquid Service" and API RP 2015 "Cleaning Petroleum Storage Tanks".

WORK/HYGIENIC PRACTICES

Emergency eye wash capability should be available in the near proximity to operations presenting a potential splash exposure. Use good personal hygiene practices. Avoid repeated and/or prolonged skin exposure. Wash hands before eating, drinking, smoking, or using toilet facilities. Do not use as a cleaning solvent on the skin. Do not use solvents or harsh abrasive skin cleaners for washing this product from exposed skin areas. Waterless hand cleaners are effective. Promptly remove contaminated clothing and launder before reuse. Use care when laundering to prevent the formation of flammable vapors which could ignite via washer or dryer. Consider the need to discard contaminated leather shoes and gloves.

8. EXPOSURE CONTROLS and PERSONAL PROTECTION

EXPOSURE LIMITS

Components (CAS No.)	Source	Exposure Limits TWA/STEL	Note
Diesel Fuel: (68476-34-6)	OSHA	5 mg/m, as mineral oil mist	
	ACGIH	100 mg/m^3 (as totally hydrocarbon vapor) TWA	A3, skin
Naphthalene (91-20-3)	OSHA	10 ppm TWA	
	ACGIH	10 ppm TWA / 15 ppm STEL	A4, Skin

ENGINEERING CONTROLS

Use adequate ventilation to keep vapor concentrations of this product below occupational exposure and flammability limits, particularly in confined spaces.

EYE/FACE PROTECTION

Safety glasses or goggles are recommended where there is a possibility of splashing or spraying.

SKIN PROTECTION

Gloves constructed of nitrile, neoprene, or PVC are recommended. Chemical protective clothing such as of E.I. DuPont TyChem®, Saranex® or equivalent recommended based on degree of exposure. Note: The resistance of specific material may vary from product to product as well as with degree of exposure. Consult manufacturer specifications for further information.

MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) **MSDS No. 9909**

RESPIRATORY PROTECTION

A NIOSH/MSHA-approved air-purifying respirator with organic vapor cartridges or canister may be permissible under certain circumstances where airborne concentrations are or may be expected to exceed exposure limits or for odor or irritation. Protection provided by air-purifying respirators is limited. Refer to OSHA 29 CFR 1910.134, NIOSH Respirator Decision Logic, and the manufacturer for additional guidance on respiratory protection selection.

Use a positive pressure, air-supplied respirator if there is a potential for uncontrolled release, exposure levels are not known, in oxygen-deficient atmospheres, or any other circumstance where an air-purifying respirator may not provide adequate protection.

9. PHYSICAL and CHEMICAL PROPERTIES

APPEARANCE

Clear, straw-yellow liquid. Dyed fuel oil will be red or reddish-colored.

ODOR

Mild, petroleum distillate odor

BASIC PHYSICAL PROPERTIES

BOILING RANGE:	320 to 690 oF (160 to 366 °C)
VAPOR PRESSURE:	0.009 psia @ 70 °F (21 °C)
VAPOR DENSITY (air = 1):	> 1.0
SPECIFIC GRAVITY (H_2O = 1):	0.83 to 0.88 @ 60 °F (16 °C)
PERCENT VOLATILES:	100 %
EVAPORATION RATE:	Slow; varies with conditions
SOLUBILITY (H_2O):	Negligible

10. STABILITY and REACTIVITY

STABILITY: Stable. Hazardous polymerization will not occur.

CONDITIONS TO AVOID and INCOMPATIBLE MATERIALS

Avoid high temperatures, open flames, sparks, welding, smoking and other ignition sources. Keep away from strong oxidizers; Viton ®; Fluorel ®

HAZARDOUS DECOMPOSITION PRODUCTS

Carbon monoxide, carbon dioxide and non-combusted hydrocarbons (smoke).

11. TOXICOLOGICAL PROPERTIES

ACUTE TOXICITY

Acute dermal LD50 (rabbits): > 5 ml/kg
Acute oral LD50 (rats): 9 ml/kg
Primary dermal irritation: extremely irritating (rabbits)
Draize eye irritation: non-irritating (rabbits)
Guinea pig sensitization: negative

CHRONIC EFFECTS AND CARCINOGENICITY

Carcinogenic: OSHA: NO IARC: NO NTP: NO ACGIH: A3

Studies have shown that similar products produce skin tumors in laboratory animals following repeated applications without washing or removal. The significance of this finding to human exposure has not been determined. Other studies with active skin carcinogens have shown that washing the animal's skin with soap and water between applications reduced tumor formation.

MUTAGENICITY (genetic effects)

This material has been positive in a mutagenicity study.

MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) **MSDS No. 9909**

12. ECOLOGICAL INFORMATION

Keep out of sewers, drainage areas, and waterways. Report spills and releases, as applicable, under Federal and State regulations.

13. DISPOSAL CONSIDERATIONS

Consult federal, state and local waste regulations to determine appropriate disposal options.

14. TRANSPORTATION INFORMATION

PROPER SHIPPING NAME:	Diesel Fuel	Placard (International Only):
HAZARD CLASS and PACKING GROUP:	3, PG III	
DOT IDENTIFICATION NUMBER:	NA 1993 (Domestic) UN 1202 (International)	
DOT SHIPPING LABEL:	None	

Use Combustible Placard if shipping in bulk domestically

15. REGULATORY INFORMATION

U.S. FEDERAL, STATE, and LOCAL REGULATORY INFORMATION

This product and its constituents listed herein are on the EPA TSCA inventory. Any spill or uncontrolled release of this product, including any substantial threat of release, may be subject to federal, state and/or local reporting requirements. This product and/or its constituents may also be subject to other regulations at the state and/or local level. Consult those regulations applicable to your facility/operation.

CLEAN WATER ACT (OIL SPILLS)

Any spill or release of this product to "navigable waters" (essentially any surface water, including certain wetlands) or adjoining shorelines sufficient to cause a visible sheen or deposit of a sludge or emulsion must be reported immediately to the National Response Center (1-800-424-8802) as required by U.S. Federal Law. Also contact appropriate state and local regulatory agencies as required.

CERCLA SECTION 103 and SARA SECTION 304 (RELEASE TO THE ENVIRONMENT)

The CERCLA definition of hazardous substances contains a "petroleum exclusion" clause which exempts crude oil, refined, and unrefined petroleum products and any indigenous components of such. However, other federal reporting requirements (e.g., SARA Section 304 as well as the Clean Water Act if the spill occurs on navigable waters) may still apply.

SARA SECTION 311/312 - HAZARD CLASSES

ACUTE HEALTH	CHRONIC HEALTH	FIRE	SUDDEN RELEASE OF PRESSURE	REACTIVE
X	X	X	–	–

SARA SECTION 313 - SUPPLIER NOTIFICATION

This product may contain listed chemicals below the *de minimis* levels which therefore are not subject to the supplier notification requirements of Section 313 of the Emergency Planning and Community Right-To-Know Act (EPCRA) of 1986 and of 40 CFR 372. If you may be required to report releases of chemicals listed in 40 CFR 372.28, you may contact Hess Corporate Safety if you require additional information regarding this product.

CALIFORNIA PROPOSITON 65 LIST OF CHEMICALS

This product contains the following chemicals that are included on the Proposition 65 "List of Chemicals" required by the California Safe Drinking Water and Toxic Enforcement Act of 1986:

INGREDIENT NAME (CAS NUMBER)	Date Listed
Diesel Engine Exhaust (no CAS Number listed)	10/01/1990

CANADIAN REGULATORY INFORMATION (WHMIS)

Class B, Division 3 (Combustible Liquid) and Class D, Division 2, Subdivision B (Toxic by other means)

MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) **MSDS No. 9909**

Furthermore, vendee assumes the risk in their use of the material.

IRVING

MATERIAL SAFETY DATA SHEET

Product Name: Regular Unleaded Gasoline (3392)

SECTION 1 – PRODUCT IDENTIFICATION AND USE

Product name	Regular Gasoline (unleaded) *Note: All Irving gasolines are*	**PIN #, UN #**	1203
Chemical name	Natural gasoline	**TDG, DOT class**	Class 3
Common names and Product use	Automotive gasoline	**Packing group**	II
	Fuel	**Shipping name**	Gasoline; Motor spirit; or Petrol

WHMIS classification
Flammable liquid Class B Division 2
Very toxic material Class D Division 2 Subdivision A

Hazard codes

NFPA		HMIS	
Health	1	Health	1
Flammability	3	Flammability	3
Reactivity	0	Reactivity	0

NFPA & HMIS Ratings: 0=Insignificant/No Hazard, 1=Slight Hazard, 2=Moderate Hazard, 3=High/Serious Hazard, 4=Extreme/Severe

Supplier
Irving Oil Limited, Refining Division
Box 1260, Saint John
New Brunswick Canada E2L 4H6

Phone (506) 202-2000
Emergency 1-800-424-9300
Refinery (506) 202-3000

SECTION 2 – HAZARDOUS INGREDIENTS

Ingredients	CAS#	Wt (%)	ACGIH-TLVs (2004) (ppm) TWA	STEL	OSHA PELs (ppm) (2004) (general industry) TWA	STEL		NIOSH RELs (2004) (ppm) TWA	STEL	LD_{50} (rat, oral)	LC_{50} (rat, 4 hours)
Gasoline	8006-61-9	100	300	500	Not available			Not available		13.6 g/kg	43 g/m³
Contains a variety of aromatic and aliphatic hydrocarbons including:											
Benzene	71-43-2	NAv	0.5	2.5	1	5	None	0.1	1.0	0.9 g/kg	13,200 ppm
n-Hexane	110-54-3	NAv	50	None	500	None	None	50	None	0.025 g/kg	48,000 ppm
Toluene	108-88-3	NAv	50	None	200	300	500	100	150	0.636 g/kg	49 g/m³

Gasoline is a complex mixture of hydrocarbons. Its exact composition depends on the source of the crude oil from which it was produced and the refining methods used. Gasoline contains hundreds of individual organic chemicals. This section identifies only some of the well-known chemical constituents.

SECTION 3 – PHYSICAL DATA

Form	Liquid	**Specific gravity**	Typically 0.72 to 0.76 @ 15°C
Colour	Clear to yellow	**Vapour density**	Typically 2.5 to 3.7 (air = 1)
Odour	Characteristic odour	**Vapour**	Variable: 400 to 775 mm Hg @ 20°C
Odour	About 0.1 ppm	**Evaporation rate**	Rapid, ~4. (Butyl acetate = 1)
pH	NAp	**Boiling point**	29 to 217°C (85 to 424°F)
Coefficient of water/oil	NAv. Expected to be >1	**Freezing point**	NAv

SECTION 4 – FIRE AND EXPLOSION HAZARDS

Flammability ☒ Yes ☐ No **Conditions** Easily ignited by heat, sparks or flames.

Flash point	Typically about -43°C (-45°F) (cc)	**Auto ignition**	Typically 257°C (494°F)
Lower flammable	Typically 1.4%	**Upper flammable limit**	Typically 7.6%

Explosion data: Sensitivity **Mechanical impact** Not expected to be sensitive **Static discharge** Vapour: yes

Means of extinction In general, do not extinguish fire unless flow can be stopped. Use carbon dioxide, dry chemical, or foam. Cool containers with flooding quantities of water until well after the fire is out.

Special precautions Vapour is heavier than air. It will spread along the ground & collect in low or confined areas (sewers, basements). Also travels to source of ignition and flash back. Containers may explode when heated.

Hazardous combustion Carbon monoxide. Nitrogen oxides. PAHs, phenols, and other aromatic hydrocarbons.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited

MATERIAL SAFETY DATA SHEET

Product Name: Regular Unleaded Gasoline (3392)

SECTION 5 – REACTIVITY INFORMATION

Stability	Stable
Conditions to avoid	Sources of ignition. Static discharges. High temperatures.
Incompatible substances	Oxidizers such as peroxides, nitric acid, and perchlorates.
Hazardous decomposition products	Carbon monoxide, nitrogen oxides, and numerous aromatic hydrocarbons.

SECTION 6 – HEALTH HAZARD INFORMATION

Route of Entry

- ☐ Eye
- ☒ Skin absorption
- ☒ Inhalation
- ☒ Ingestion

Hazardous

- ☒ Eye
- ☒ Skin contact

Acute exposure Headache, nausea, dizziness and other symptoms of central nervous system (CNS) depression. Aspiration into the lungs can cause severe pneumonitis (serious lung irritation), with coughing, gagging, shortness of breath, chest pain, and/or pulmonary edema (swelling).

Chronic exposure Peripheral & CNS damage, such as tremors, hallucinations, memory loss, & impaired mental capacity. Damage to kidneys and blood-producing system. Prolonged skin contact may cause

Carcinogenicity EPA, IARC, and NIOSH consider gasoline to be a suspected (potential) carcinogen. ACGIH refers to gasoline as a confirmed animal carcinogen with unknown relevance to humans. NTP and OSHA have not classified gasoline for carcinogenicity. Benzene is a recognized carcinogen

Teratogenicit Yes (toluene)

Reproductive toxicity NAv

Mutagenicity Not known to be mutagenic

Irritancy Skin eyes, and respiratory tract. Very serious irritant if trapped against skin. **Sensitization** No

Toxicologically synergistic Other CNS depressants can be expected to produce additive or synergistic effects.

SECTION 7 – FIRST AID

Inhalation Move victim to fresh air. Give artificial respiration if breathing has stopped and if a qualified AR administrator is available. Apply CPR if both pulse and breathing have stopped. Obtain medical attention immediately.

Ingestion Never give anything by mouth if the person is unconscious, rapidly losing consciousness, or convulsing. If the person is conscious, have them drink 8 to 10 ounces of water or milk to dilute the material in the stomach. Do not induce vomiting. If vomiting occurs spontaneously, have the person lean forward to avoid aspiration. Obtain medical attention immediately.

Eye If irritation occurs, flush eye with lukewarm, gently flowing fresh water for at least 10 minutes.

Skin Quickly and gently blot away excess chemical. Remove contaminated clothing and shoes. Wash skin gently and thoroughly with water and non-abrasive soap. Obtain medical assistance.

SECTION 8 – PRECAUTIONARY MEASURES

Personal protective equipment	**Gloves**	Nitrile, Viton™, Responder®, Tychem®BR/LV, or Tychem®TK preferred.
	Eye	Chemical safety goggle or face shield, as a good general safety practice.
	Respiratory	NIOSH-approved. SCBA or air line respirator with escape cylinder for confined spaces. A qualified occupational health and safety professional should advise on respirator selection. If an air-purifying respirator is appropriate, use a "P series" filter & organic vapour cartridges.
	Clothing & footwear	Coveralls to prevent skin contact with product. If clothing or footwear becomes contaminated with product, completely decontaminate it before re-use, or discard it.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited

MATERIAL SAFETY DATA SHEET

Product Name: Regular Unleaded Gasoline (3392)

Engineering controls	Enclose processes. Use local exhaust ventilation to remove vapour at its site of generation. Handle laboratory samples in a fume hood. Use mechanical ventilation in confined spaces.
Handling procedures & equipment	Eliminate all sources of ignition. Ensure that ventilation systems are explosion-proof, non-sparking, and grounded. Use intrinsically-safe electrical systems. Ground and bond transfer containers. Keep containers closed. Have safety shower and eyewash in the work area. Never siphon gasoline by mouth.
Leak & spill Procedure	Keep unauthorized persons away. Eliminate all sources of ignition. Ventilate area. Stop leak if it can be done safely. Prevent entry into sewers, waterways, or confined spaces. Small spills: Contain with earth, sand, or non-flammable absorbent material. Shovel (non-sparking tools) into clean, dry, labelled containers and cover. Flush area with water. Large spills: Contact emergency services for advice.
Waste	Contact appropriate governmental agencies for approved disposal of material.
Storage	Cool, dry, well-ventilated area, out of direct sunlight. No ignition sources or incompatible materials. Containers should be grounded, vented and equipped with a flame arrester. Consider leak detection and alarm equipment for storage area.
Shipping	Load at normal temperature (up to 38°C) and pressure. Bond and ground containers for transfer.

SECTION 9 – PREPARATION DATE OF MSDS

Prepared by	Irving Oil Limited, Refining Division	**Phone**	(506) 202-3000
Revision date	July 26, 2005	**To re-order MSDS,**	(506) 202-2000

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) including ULSD **MSDS No. 9909**

EMERGENCY OVERVIEW
CAUTION!
OSHA/NFPA COMBUSTIBLE LIQUID - SLIGHT TO MODERATE IRRITANT
EFFECTS CENTRAL NERVOUS SYSTEM
HARMFUL OR FATAL IF SWALLOWED

Moderate fire hazard. Avoid breathing vapors or mists. May cause dizziness and drowsiness. May cause moderate eye irritation and skin irritation (rash). Long-term, repeated exposure may cause skin cancer.
If ingested, do NOT induce vomiting, as this may cause chemical pneumonia (fluid in the lungs).

NFPA 704 (Section 16)

1. CHEMICAL PRODUCT AND COMPANY INFORMATION

Hess Corporation
1 Hess Plaza
Woodbridge, NJ 07095-0961

EMERGENCY TELEPHONE NUMBER (24 hrs): CHEMTREC (800) 424-9300
COMPANY CONTACT (business hours): Corporate Safety (732) 750-6000
MSDS INTERNET WEBSITE: www.hess.com (See Environment, Health, Safety & Social Responsibility)

SYNONYMS: Ultra Low Sulfur Diesel (ULSD); Low Sulfur Diesel; Motor Vehicle Diesel Fuel; Diesel Fuel #2; Dyed Diesel Fuel; Non-Road, Locomotive and Marine Diesel Fuel; Tax-exempt Diesel Fuel

See Section 16 for abbreviations and acronyms.

2. COMPOSITION and CHEMICAL INFORMATION ON INGREDIENTS

INGREDIENT NAME (CAS No.)	CONCENTRATION PERCENT BY WEIGHT
Diesel Fuel (68476-34-6)	100
Naphthalene (91-20-3)	Typically < 0.01

A complex mixture of hydrocarbons with carbon numbers in the range C9 and higher. Diesel fuel may be dyed (red) for tax purposes. May contain a multifunctional additive.

3. HAZARDS IDENTIFICATION

EYES
Contact with liquid or vapor may cause mild irritation.

SKIN
May cause skin irritation with prolonged or repeated contact. Practically non-toxic if absorbed following acute (single) exposure. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are repeatedly exposed.

INGESTION
The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death.

Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) **MSDS No. 9909**

INHALATION
Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

WARNING: the burning of any hydrocarbon as a fuel in an area without adequate ventilation may result in hazardous levels of combustion products, including carbon monoxide, and inadequate oxygen levels, which may cause unconsciousness, suffocation, and death.

CHRONIC EFFECTS and CARCINOGENICITY
Similar products produced skin cancer and systemic toxicity in laboratory animals following repeated applications. The significance of these results to human exposures has not been determined - see Section 11 Toxicological Information.

IARC classifies whole diesel fuel exhaust particulates as probably carcinogenic to humans (Group 2A). NIOSH regards whole diesel fuel exhaust particulates as a potential cause of occupational lung cancer based on animal studies and limited evidence in humans.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE
Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash).

4. FIRST AID MEASURES

EYES
In case of contact with eyes, immediately flush with clean, low-pressure water for at least 15 min. Hold eyelids open to ensure adequate flushing. Seek medical attention.

SKIN
Remove contaminated clothing. Wash contaminated areas thoroughly with soap and water or waterless hand cleanser. Obtain medical attention if irritation or redness develops.

INGESTION
DO NOT INDUCE VOMITING. Do not give liquids. Obtain immediate medical attention. If spontaneous vomiting occurs, lean victim forward to reduce the risk of aspiration. Monitor for breathing difficulties. Small amounts of material which enter the mouth should be rinsed out until the taste is dissipated.

INHALATION
Remove person to fresh air. If person is not breathing provide artificial respiration. If necessary, provide additional oxygen once breathing is restored if trained to do so. Seek medical attention immediately.

5. FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES:

FLASH POINT:	> 125 °F (> 52 °C) minimum PMCC
AUTOIGNITION POINT:	494 °F (257 °C)
OSHA/NFPA FLAMMABILITY CLASS:	2 (COMBUSTIBLE)
LOWER EXPLOSIVE LIMIT (%):	0.6
UPPER EXPLOSIVE LIMIT (%):	7.5

FIRE AND EXPLOSION HAZARDS
Vapors may be ignited rapidly when exposed to heat, spark, open flame or other source of ignition. When mixed with air and exposed to an ignition source, flammable vapors can burn in the open or explode in confined spaces. Being heavier than air, vapors may travel long distances to an ignition source and flash back. Runoff to sewer may cause fire or explosion hazard.

EXTINGUISHING MEDIA
SMALL FIRES: Any extinguisher suitable for Class B fires, dry chemical, CO2, water spray, fire fighting foam, or Halon.

LARGE FIRES: Water spray, fog or fire fighting foam. Water may be ineffective for fighting the fire, but may be used to cool fire-exposed containers.

FIRE FIGHTING INSTRUCTIONS
Small fires in the incipient (beginning) stage may typically be extinguished using handheld portable fire extinguishers and other fire fighting equipment.

Firefighting activities that may result in potential exposure to high heat, smoke or toxic by-products of combustion should require NIOSH/MSHA- approved pressure-demand self-contained breathing apparatus with full facepiece and full protective clothing.

Isolate area around container involved in fire. Cool tanks, shells, and containers exposed to fire and excessive heat with water. For massive fires the use of unmanned hose holders or monitor nozzles may be advantageous to further minimize personnel exposure. Major fires may require withdrawal, allowing the tank to burn. Large storage tank fires typically require specially trained personnel and equipment to extinguish the fire, often including the need for properly applied fire fighting foam.

See Section 16 for the NFPA 704 Hazard Rating.

6. ACCIDENTAL RELEASE MEASURES

ACTIVATE FACILITY'S SPILL CONTINGENCY OR EMERGENCY RESPONSE PLAN.

Evacuate nonessential personnel and remove or secure all ignition sources. Consider wind direction; stay upwind and uphill, if possible. Evaluate the direction of product travel, diking, sewers, etc. to confirm spill areas. Spills may infiltrate subsurface soil and groundwater; professional assistance may be necessary to determine the extent of subsurface impact.

Carefully contain and stop the source of the spill, if safe to do so. Protect bodies of water by diking, absorbents, or absorbent boom, if possible. Do not flush down sewer or drainage systems, unless system is designed and permitted to handle such material. The use of fire fighting foam may be useful in certain situations to reduce vapors. The proper use of water spray may effectively disperse product vapors or the liquid itself, preventing contact with ignition sources or areas/equipment that require protection.

Take up with sand or other oil absorbing materials. Carefully shovel, scoop or sweep up into a waste container for reclamation or disposal - caution, flammable vapors may accumulate in closed containers. Response and clean-up crews must be properly trained and must utilize proper protective equipment (see Section 8).

7. HANDLING and STORAGE

HANDLING PRECAUTIONS
Handle as a combustible liquid. Keep away from heat, sparks, and open flame! Electrical equipment should be approved for classified area. Bond and ground containers during product transfer to reduce the possibility of static-initiated fire or explosion.

Diesel fuel, and in particular low and ultra low sulfur diesel fuel, has the capability of accumulating a static electrical charge of sufficient energy to cause a fire/explosion in the presence of lower flashpoint products such as gasoline. The accumulation of such a static charge occurs as the diesel flows through pipelines, filters, nozzles and various work tasks such as tank/container filling, splash loading, tank cleaning; product sampling; tank gauging; cleaning, mixing, vacuum truck operations, switch loading, and product agitation. There is a greater potential for static charge accumulation in cold temperature, low humidity conditions.

Documents such as 29 CFR OSHA 1910.106 "Flammable and Combustible Liquids, NFPA 77 Recommended Practice on Static Electricity, API 2003 "Protection Against Ignitions Arising Out of Static, Lightning, and Stray Currents and ASTM D4865 "Standard Guide for Generation and Dissipation of Static

Electricity in Petroleum Fuel Systems" address special precautions and design requirements involving loading rates, grounding, bonding, filter installation, conductivity additives and especially the hazards associated with "switch loading." ["Switch Loading" is when a higher flash point product (such as diesel) is loaded into tanks previously containing a low flash point product (such as gasoline) and the electrical charge generated during loading of the diesel results in a static ignition of the vapor from the previous cargo (gasoline).]

Note: When conductivity additives are used or are necessary the product should achieve 25 picosiemens/meter or greater at the handling temperature.

STORAGE PRECAUTIONS

Keep away from flame, sparks, excessive temperatures and open flame. Use approved vented containers. Keep containers closed and clearly labeled. Empty product containers or vessels may contain explosive vapors. Do not pressurize, cut, heat, weld or expose such containers to sources of ignition.

Store in a well-ventilated area. This storage area should comply with NFPA 30 "Flammable and Combustible Liquid Code". Avoid storage near incompatible materials. The cleaning of tanks previously containing this product should follow API Recommended Practice (RP) 2013 "Cleaning Mobile Tanks In Flammable and Combustible Liquid Service" and API RP 2015 "Cleaning Petroleum Storage Tanks".

WORK/HYGIENIC PRACTICES

Emergency eye wash capability should be available in the near proximity to operations presenting a potential splash exposure. Use good personal hygiene practices. Avoid repeated and/or prolonged skin exposure. Wash hands before eating, drinking, smoking, or using toilet facilities. Do not use as a cleaning solvent on the skin. Do not use solvents or harsh abrasive skin cleaners for washing this product from exposed skin areas. Waterless hand cleaners are effective. Promptly remove contaminated clothing and launder before reuse. Use care when laundering to prevent the formation of flammable vapors which could ignite via washer or dryer. Consider the need to discard contaminated leather shoes and gloves.

8. EXPOSURE CONTROLS and PERSONAL PROTECTION

EXPOSURE LIMITS

Components (CAS No.)	Source	Exposure Limits TWA/STEL	Note
Diesel Fuel: (68476-34-6)	OSHA	5 mg/m, as mineral oil mist	
	ACGIH	100 mg/m^3 (as totally hydrocarbon vapor) TWA	A3, skin
Naphthalene (91-20-3)	OSHA	10 ppm TWA	
	ACGIH	10 ppm TWA / 15 ppm STEL	A4, Skin

ENGINEERING CONTROLS

Use adequate ventilation to keep vapor concentrations of this product below occupational exposure and flammability limits, particularly in confined spaces.

EYE/FACE PROTECTION

Safety glasses or goggles are recommended where there is a possibility of splashing or spraying.

SKIN PROTECTION

Gloves constructed of nitrile, neoprene, or PVC are recommended. Chemical protective clothing such as of E.I. DuPont TyChem®, Saranex® or equivalent recommended based on degree of exposure. Note: The resistance of specific material may vary from product to product as well as with degree of exposure. Consult manufacturer specifications for further information.

MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) **MSDS No. 9909**

RESPIRATORY PROTECTION

A NIOSH/MSHA-approved air-purifying respirator with organic vapor cartridges or canister may be permissible under certain circumstances where airborne concentrations are or may be expected to exceed exposure limits or for odor or irritation. Protection provided by air-purifying respirators is limited. Refer to OSHA 29 CFR 1910.134, NIOSH Respirator Decision Logic, and the manufacturer for additional guidance on respiratory protection selection.

Use a positive pressure, air-supplied respirator if there is a potential for uncontrolled release, exposure levels are not known, in oxygen-deficient atmospheres, or any other circumstance where an air-purifying respirator may not provide adequate protection.

9. PHYSICAL and CHEMICAL PROPERTIES

APPEARANCE

Clear, straw-yellow liquid. Dyed fuel oil will be red or reddish-colored.

ODOR

Mild, petroleum distillate odor

BASIC PHYSICAL PROPERTIES

BOILING RANGE:	320 to 690 oF (160 to 366 °C)
VAPOR PRESSURE:	0.009 psia @ 70 °F (21 °C)
VAPOR DENSITY (air = 1):	> 1.0
SPECIFIC GRAVITY (H_2O = 1):	0.83 to 0.88 @ 60 °F (16 °C)
PERCENT VOLATILES:	100 %
EVAPORATION RATE:	Slow; varies with conditions
SOLUBILITY (H_2O):	Negligible

10. STABILITY and REACTIVITY

STABILITY: Stable. Hazardous polymerization will not occur.

CONDITIONS TO AVOID and INCOMPATIBLE MATERIALS

Avoid high temperatures, open flames, sparks, welding, smoking and other ignition sources. Keep away from strong oxidizers; Viton ®; Fluorel ®

HAZARDOUS DECOMPOSITION PRODUCTS

Carbon monoxide, carbon dioxide and non-combusted hydrocarbons (smoke).

11. TOXICOLOGICAL PROPERTIES

ACUTE TOXICITY

Acute dermal LD50 (rabbits): > 5 ml/kg
Acute oral LD50 (rats): 9 ml/kg
Primary dermal irritation: extremely irritating (rabbits)
Draize eye irritation: non-irritating (rabbits)
Guinea pig sensitization: negative

CHRONIC EFFECTS AND CARCINOGENICITY

Carcinogenic: OSHA: NO IARC: NO NTP: NO ACGIH: A3

Studies have shown that similar products produce skin tumors in laboratory animals following repeated applications without washing or removal. The significance of this finding to human exposure has not been determined. Other studies with active skin carcinogens have shown that washing the animal's skin with soap and water between applications reduced tumor formation.

MUTAGENICITY (genetic effects)

This material has been positive in a mutagenicity study.

HESS

MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) **MSDS No. 9909**

12. ECOLOGICAL INFORMATION

Keep out of sewers, drainage areas, and waterways. Report spills and releases, as applicable, under Federal and State regulations.

13. DISPOSAL CONSIDERATIONS

Consult federal, state and local waste regulations to determine appropriate disposal options.

14. TRANSPORTATION INFORMATION

PROPER SHIPPING NAME:	Diesel Fuel	Placard (International Only):
HAZARD CLASS and PACKING GROUP:	3, PG III	
DOT IDENTIFICATION NUMBER:	NA 1993 (Domestic) UN 1202 (International)	
DOT SHIPPING LABEL:	None	

Use Combustible Placard if shipping in bulk domestically

15. REGULATORY INFORMATION

U.S. FEDERAL, STATE, and LOCAL REGULATORY INFORMATION

This product and its constituents listed herein are on the EPA TSCA Inventory. Any spill or uncontrolled release of this product, including any substantial threat of release, may be subject to federal, state and/or local reporting requirements. This product and/or its constituents may also be subject to other regulations at the state and/or local level. Consult those regulations applicable to your facility/operation.

CLEAN WATER ACT (OIL SPILLS)

Any spill or release of this product to "navigable waters" (essentially any surface water, including certain wetlands) or adjoining shorelines sufficient to cause a visible sheen or deposit of a sludge or emulsion must be reported immediately to the National Response Center (1-800-424-8802) as required by U.S. Federal Law. Also contact appropriate state and local regulatory agencies as required.

CERCLA SECTION 103 and SARA SECTION 304 (RELEASE TO THE ENVIRONMENT)

The CERCLA definition of hazardous substances contains a "petroleum exclusion" clause which exempts crude oil, refined, and unrefined petroleum products and any indigenous components of such. However, other federal reporting requirements (e.g., SARA Section 304 as well as the Clean Water Act if the spill occurs on navigable waters) may still apply.

SARA SECTION 311/312 - HAZARD CLASSES

ACUTE HEALTH	CHRONIC HEALTH	FIRE	SUDDEN RELEASE OF PRESSURE	REACTIVE
X	X	X	--	--

SARA SECTION 313 - SUPPLIER NOTIFICATION

This product may contain listed chemicals below the *de minimis* levels which therefore are not subject to the supplier notification requirements of Section 313 of the Emergency Planning and Community Right-To-Know Act (EPCRA) of 1986 and of 40 CFR 372. If you may be required to report releases of chemicals listed in 40 CFR 372.28, you may contact Hess Corporate Safety if you require additional information regarding this product.

CALIFORNIA PROPOSITON 65 LIST OF CHEMICALS

This product contains the following chemicals that are included on the Proposition 65 "List of Chemicals" required by the California Safe Drinking Water and Toxic Enforcement Act of 1986:

INGREDIENT NAME (CAS NUMBER)	Date Listed
Diesel Engine Exhaust (no CAS Number listed)	10/01/1990

CANADIAN REGULATORY INFORMATION (WHMIS)

Class B, Division 3 (Combustible Liquid) and Class D, Division 2, Subdivision B (Toxic by other means)

MATERIAL SAFETY DATA SHEET

Diesel Fuel (All Types) **MSDS No. 9909**

MATERIAL SAFETY DATA SHEET

Product Name: Regular Unleaded Gasoline (3392)

SECTION 1 – PRODUCT IDENTIFICATION AND USE

Product name	Regular Gasoline (unleaded) *Note: All Irving gasolines are*	**PIN #, UN #**	1203
Chemical name	Natural gasoline	**TDG, DOT class**	Class 3
Common names and Product use	Automotive gasoline Fuel	**Packing group**	II
		Shipping name	Gasoline; Motor spirit; or Petrol

WHMIS classification: Flammable liquid — Class B Division 2; Very toxic material — Class D Division 2 Subdivision A

Hazard codes

	NFPA	HMIS
Health	1	1
Flammability	3	3
Reactivity	0	0

NFPA & HMIS Ratings: 0=Insignificant/No Hazard, 1=Slight Hazard, 2=Moderate Hazard, 3=High/Serious Hazard, 4=Extreme/Severe

Supplier	Irving Oil Limited, Refining Division Box 1260, Saint John New Brunswick Canada E2L 4H5	**Phone** **Emergency** **Refinery**	(506) 202-2000 1-800-424-9300 (506) 202-3000

SECTION 2 – HAZARDOUS INGREDIENTS

Ingredients	CAS#	Wt (%)	ACGIH-TLVs (2004) (ppm) TWA	STEL	OSHA PELs (ppm) (2004) (general industry) TWA	STEL		NIOSH RELs (2004) (ppm) TWA	STEL	LD_{50} (rat, oral)	LC_{50} (rat, 4 hours)
Gasoline	8006-61-9	100	300	500	Not available			Not available		>13.6 g/kg	43 g/m³
Contains a variety of aromatic and aliphatic hydrocarbons including:											
Benzene	71-43-2	NAv	0.5	2.5	1	5	None	0.1	1.0	0.9 g/kg	13,200 ppm
n-Hexane	110-54-3	NAv	50	None	500	None	None	50	None	0.025 g/kg	48,000 ppm
Toluene	108-88-3	NAv	50	None	200	300	500	100	150	0.636 g/kg	49 g/m³

Gasoline is a complex mixture of hydrocarbons. Its exact composition depends on the source of the crude oil from which it was produced and the refining methods used. Gasoline contains hundreds of individual organic chemicals. This section identifies only some of the well-known chemical constituents.

SECTION 3 – PHYSICAL DATA

Form	Liquid	**Specific gravity**	Typically 0.72 to 0.76 @ 15°C
Colour	Clear to yellow	**Vapour density**	Typically 2.5 to 3.7 (air = 1)
Odour	Characteristic odour	**Vapour**	Variable: 400 to 775 mm Hg @ 20°C
Odour	About 0.1 ppm	**Evaporation rate**	Rapid, ~4. (Butyl acetate = 1)
pH	NAp	**Boiling point**	29 to 217°C (85 to 424°F)
Coefficient of water/oil	NAv. Expected to be >1	**Freezing point**	NAv

SECTION 4 – FIRE AND EXPLOSION HAZARDS

Flammability ☒ Yes ☐ No **Conditions** Easily ignited by heat, sparks or flames.

Flash point	Typically about -43°C (-45°F) (cc)	**Auto ignition**	Typically 257°C (494°F)
Lower flammable	Typically 1.4%	**Upper flammable limit**	Typically 7.6%

Explosion data: Sensitivity **Mechanical impact** Not expected to be sensitive **Static discharge** Vapour: yes

Means of extinction	In general, do not extinguish fire unless flow can be stopped. Use carbon dioxide, dry chemical, or foam. Cool containers with flooding quantities of water until well after the fire is out.
Special precautions	Vapour is heavier than air. It will spread along the ground & collect in low or confined areas (sewers, basements). Also travels to source of ignition and flash back. Containers may explode when heated.
Hazardous combustion	Carbon monoxide, Nitrogen oxides, PAHs, phenols, and other aromatic hydrocarbons.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited.

MATERIAL SAFETY DATA SHEET

Product Name: Regular Unleaded Gasoline (3392)

SECTION 5 – REACTIVITY INFORMATION

Stability	Stable
Conditions to avoid	Sources of ignition. Static discharges. High temperatures.
Incompatible substances	Oxidizers such as peroxides, nitric acid, and perchlorates.
Hazardous decomposition products	Carbon monoxide, nitrogen oxides, and numerous aromatic hydrocarbons.

SECTION 6 – HEALTH HAZARD INFORMATION

Route of Entry

- ☐ Eye
- ☒ Skin absorption
- ☒ Inhalation
- ☒ Ingestion

Hazardous

- ☒ Eye
- ☒ Skin contact

Acute exposure Headache, nausea, dizziness and other symptoms of central nervous system (CNS) depression. Aspiration into the lungs can cause severe pneumonitis (serious lung irritation), with coughing, gagging, shortness of breath, chest pain, and/or pulmonary edema (swelling).

Chronic exposure Peripheral & CNS damage, such as tremors, hallucinations, memory loss, & impaired mental capacity. Damage to kidneys and blood-producing system. Prolonged skin contact may cause

Carcinogenicity EPA, IARC, and NIOSH consider gasoline to be a suspected (potential) carcinogen. ACGIH refers to gasoline as a confirmed animal carcinogen with unknown relevance to humans. NTP and OSHA have not classified gasoline for carcinogenicity. Benzene is a recognized carcinogen.

Teratogenicit Yes (toluene)

Reproductive toxicity NAv

Mutagenicity Not known to be mutagenic

Irritancy Skin eyes, and respiratory tract. Very serious irritant if trapped against skin.

Sensitization No

Toxicologically synergistic Other CNS depressants can be expected to produce additive or synergistic effects.

SECTION 7 – FIRST AID

Inhalation Move victim to fresh air. Give artificial respiration if breathing has stopped and if a qualified AR administrator is available. Apply CPR if both pulse and breathing have stopped. Obtain medical attention immediately.

Ingestion Never give anything by mouth if the person is unconscious, rapidly losing consciousness, or convulsing. If the person is conscious, have them drink 8 to 10 ounces of water or milk to dilute the material in the stomach. Do not induce vomiting. If vomiting occurs spontaneously, have the person lean forward to avoid aspiration. Obtain medical attention immediately.

Eye If irritation occurs, flush eye with lukewarm, gently flowing fresh water for at least 10 minutes.

Skin Quickly and gently blot away excess chemical. Remove contaminated clothing and shoes. Wash skin gently and thoroughly with water and non-abrasive soap. Obtain medical assistance.

SECTION 8 – PRECAUTIONARY MEASURES

Personal protective equipment	**Gloves**	Nitrile, Viton™, Responder®, Tychem®BR/LV, or Tychem®TK preferred.
	Eye	Chemical safety goggle or face shield, as a good general safety practice.
	Respiratory	NIOSH-approved. SCBA or air line respirator with escape cylinder for confined spaces. A qualified occupational health and safety professional should advise on respirator selection. If an air-purifying respirator is appropriate, use a "P series" filter & organic vapour cartridges.
	Clothing & footwear	Coveralls to prevent skin contact with product. If clothing or footwear becomes contaminated with product, completely decontaminate it before re-use, or discard it.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantees the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited

MATERIAL SAFETY DATA SHEET

Product Name: Regular Unleaded Gasoline (3392)

Engineering controls	Enclose processes. Use local exhaust ventilation to remove vapour at its site of generation. Handle laboratory samples in a fume hood. Use mechanical ventilation in confined spaces.
Handling procedures & equipment	Eliminate all sources of ignition. Ensure that ventilation systems are explosion-proof, non-sparking, and grounded. Use intrinsically-safe electrical systems. Ground and bond transfer containers. Keep containers closed. Have safety shower and eyewash in the work area. Never siphon gasoline by mouth.
Leak & spill Procedure	Keep unauthorized persons away. Eliminate all sources of ignition. Ventilate area. Stop leak if it can be done safely. Prevent entry into sewers, waterways, or confined spaces. Small spills: Contain with earth, sand, or non-flammable absorbent material. Shovel (non-sparking tools) into clean, dry, labelled containers and cover. Flush area with water. Large spills: Contact emergency services for advice.
Waste	Contact appropriate governmental agencies for approved disposal of material.
Storage	Cool, dry, well-ventilated area, out of direct sunlight. No ignition sources or incompatible materials. Containers should be grounded, vented and equipped with a flame arrester. Consider leak detection and alarm equipment for storage area.
Shipping	Load at normal temperature (up to 38°C) and pressure. Bond and ground containers for transfer.

SECTION 9 – PREPARATION DATE OF MSDS

Prepared by	Irving Oil Limited, Refining Division	**Phone**	(506) 202-3000
Revision date	July 26, 2005	**To re-order MSDS.**	(506) 202-2000

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. Fuel oil is a complex mixture of hydrocarbons. Its exact composition depends on the source of the crude oil from which it was produced and the refining methods used. Fuel oil contains hundreds of individual organic chemicals. This section identifies only some of the well-known chemical constituents.

SECTION 3 – PHYSICAL DATA

Form	Slightly viscous, oily, liquid	**Vapour pressure**	2.12 to 26.4 mm Hg @ 21°C
Colour	Yellowish-brown	**Evaporation rate**	NAv
Odour	Kerosene-like	**Boiling point**	160 to 358°C (321 to 676°F)
Odour threshold	Not available	**Freezing point**	NAv
Specific gravity	0.830 to 0.879 @ 20°C	**pH**	NAp
Vapour density	NAv	**Coefficient of water/oil distribution**	3.3 to 7.06 (Log K_{ow})

SECTION 4 – FIRE AND EXPLOSION HAZARDS

Flammability ☒ Yes ☐ No **Conditions** Easily ignited by heat, sparks or flames.

Flash point	38 to 54°C (100 to 130°F) (cc)	**Auto ignition temperature**	257°C (494°F)
Lower flammable limit	0.6 to 1.3%	**Upper flammable limit**	8 to 7.5%

Explosion data: Sensitivity to: **Mechanical impact** Not expected to be sensitive **Static discharge** Vapour: yes

Means of extinction In general, do not extinguish fire unless flow can be stopped. Use carbon dioxide, dry chemical, or foam. Cool containers with flooding quantities of water until well after the fire is out.

Special precautions Vapour is heavier than air. It will spread along the ground & collect in low or confined areas (sewers, basements). Also travels to source of ignition and flash back. Containers may explode when heated.

Hazardous combustion products Carbon monoxide. Nitrogen oxides. PAHs and other aromatic hydrocarbons. H_2S and sulphur dioxide (SO_2) may be produced from minor amounts of sulphur in the product.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited

IRVING

MATERIAL SAFETY DATA SHEET

Product Name: Ultra Low Sulphur Diesel (3094)

SECTION 5 – REACTIVITY INFORMATION

Stability	Stable
Conditions to avoid	Sources of ignition. Static discharges. High temperatures.
Incompatible substances	Oxidizers such as peroxides, nitric acid, and perchlorates.
Hazardous decomposition products	Carbon monoxide, nitrogen oxides, and numerous aromatic hydrocarbons. H_2S and SO_2 may be produced by the minor amounts of sulfur in the product.

SECTION 6 – HEALTH HAZARD INFORMATION

Route of Entry

- ☐ **Eye**
- ☒ **Skin absorption** Fuel itself, as well as benzene & naphthalene
- ☒ **Inhalation**
- ☒ **Ingestion**

Hazardous Contact

- ☒ **Eye**
- ☒ **Skin contact**

Acute exposure

Coughing, headache, and giddiness following inhalation. Aspiration into the lungs can cause severe pneumonitis (serious lung irritation), with coughing, gagging, shortness of breath, chest pain, and/or pulmonary edema (swelling). Ingestion may produce nausea, vomiting, and cramping. Kidney effects and systemic edema have been reported after severe exposure.
Note: H_2S may offgas from the product in confined spaces, even thought the concentration of sulphur in the product is minor. H_2S is very toxic. At concentrations as low as 1 to 5 ppm, nausea and severe eye irritation may occur. Sense of smell may be impaired at about 20 ppm, with headache and respiratory tract lung irritation. At 250 to 500 ppm, potentially fatal pulmonary edema (fluid in the lungs) may occur. Dizziness, sudden (often fatal) collapse, unconsciousness, and death occur at higher concentrations. Note: Pulmonary edema may be delayed as long as 48 hours after exposure.

Chronic exposure

Kidney, gastrointestinal, blood, and skin disorders. Headache, nausea, vomiting. Fatigue, and severe nervous and respiratory system symptoms may follow survival of H_2S poisoning.

Carcinogenicity

Benzene and certain PAHs are known to be carcinogenic. Exposure to fuel oils during refining is considered "probably carcinogenic to humans".
IARC and NTP classify untreated and mildly treated mineral oils as known human carcinogens. ACGIH, EPA, NIOSH, and OSHA have not classified them.

Mutagenicity	Not known to be mutagenic
Sensitization	No
Irritancy	Skin and respiratory tract
Teratogenicity	Not available
Reproductive toxicity	Not available

Toxicologically synergistic products Other CNS depressants can be expected to produce additive or synergistic effects.

SECTION 7 – FIRST AID

Inhalation Move victim to fresh air Give artificial respiration if breathing has stopped and if a qualified AR administrator is available. Apply CPR if both pulse and breathing have stopped. Obtain medical attention immediately.

Ingestion Never give anything by mouth if the person is unconscious, rapidly losing consciousness, or convulsing. If the person is conscious, have them drink 8 to 10 ounces of water or milk to dilute the material in the stomach. Do not induce vomiting. If vomiting occurs spontaneously, have the person lean forward to avoid aspiration. Obtain medical attention immediately.

Eye If irritation occurs, flush eye with lukewarm, gently flowing fresh water for at least 10 minutes.

Skin Quickly and gently blot away excess chemical. Gently remove contaminated clothing and shoes under running water. Wash gently and thoroughly with water and non-abrasive soap. Obtain medical assistance.

SECTION 8 – PRECAUTIONARY MEASURES

Do not attempt rescue of an H_2S knockdown victim without the use of proper respiratory protective equipment.

Personal protective equipment	**Gloves**	Nitrile, Viton™, Polyvinylchloride, Tychem®BR/LV, or Tychem®TK preferred.
	Eye	Chemical safety goggle or face shield, as a good general safety practice.
	Respiratory	NIOSH-approved SCBA or air line respirator with escape cylinder.
	Clothing & footwear	Coveralls to prevent skin contact with product. If clothing or footwear becomes contaminated with product, completely decontaminate it before re-use, or discard it.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited

IRVING

MATERIAL SAFETY DATA SHEET

Product Name: Ultra Low Sulphur Diesel (3094)

Engineering controls	Enclose processes. Use local exhaust ventilation to remove vapour at its site of generation. Handle laboratory samples in a fume hood. Use mechanical ventilation in confined spaces.
Handling procedures & equipment	Avoid heating open containers of product so as to minimize vapour production and accumulation. Use non-sparking equipment, explosion-proof ventilation, and intrinsically safe electrical equipment. Ground handling equipment. Have clean emergency eyewash and shower readily available in the work area.
Leak & spill Procedure	Keep unauthorized persons away Eliminate all sources of ignition. Ventilate area. Stop leak if it can be done safely. Prevent entry into sewers, waterways, or confined spaces. Absorb or cover with dry earth, sand or other non-combustible material and use clean, non-sparking tools to transfer to container.
Waste disposal	Consult local authorities for advice.
Storage	May be stored at ambient temperatures. Containers should be vented and equipped with a flame arrester.
Shipping	Stable during transport. May be transported hot.

SECTION 9 – PREPARATION DATE OF MSDS

Prepared by	Irving Oil Limited, Refining Division	**Phone**	(506) 202-3000

MATERIAL SAFETY DATA SHEET

Product Name: Ultra Low Sulphur Diesel (3094)

SECTION 1 – PRODUCT IDENTIFICATION AND USE

Product name	Ultra Low Sulphur Diesel	**PIN #, UN #**	1202
Chemical name	None	**TDG, DOT class**	Class 3
Common names and synonyms	API No. 2 fuel oil. Home heating oil No. 2. Number 2 burner oil.	**Packing group**	III
Product use	Fuel	**Shipping Name**	Diesel Fuel; Fuel Oil; Gas Oil; or Heating Oil, Light

WHMIS classification Combustible liquid Class B Division 3
Toxic Class D Division 2 Subdivision B

Hazard codes

NFPA	Health	1	**HMIS**	Health	1
	Flammability	2		Flammability	2
	Reactivity	0		Reactivity	0

NFPA & HMIS Ratings: 0=Insignificant/No Hazard, 1=Slight Hazard, 2=Moderate Hazard, 3=High/Serious Hazard, 4=Extreme/Severe Hazard.

Supplier	Irving Oil Limited, Refining Division Box 1250, Saint John New Brunswick Canada E2L 4H6	**Phone** **Emergency (Chemtrec)** **Refinery**	(506) 202-2000 1-800-424-9300 (506) 202-3000

SECTION 2 – HAZARDOUS INGREDIENTS

Ingredients	CAS#	Wt (%)	ACGIH-TLVs (2004)	OSHA PELs (2004) (general industry)	NIOSH RELs (2004)	LD_{50} (rat, oral)	LC_{50} (rat, 4 hours)
Fuel oil	68476-30-2	100	100 mg/m³ TWA (vapour &	NAv for this product name or CAS#		>5 g/kg	~5g/m³
May contain:							
Benzene	71-43-2	Trace	0.5 ppm TWA 2.5 ppm STEL	1 ppm TWA 5 ppm STEL	0.1 ppm TWA 1.0 ppm STEL	930 mg/kg	3,200 ppm
Polycyclic aromatic hydrocarbons (PAHs)	Various	Up to 10	Various	Various	Various	Various	Various
which may include:							
Naphthalene	91-20-3	Trace	10 ppm TWA 15 ppm STEL	10 ppm TWA	10 ppm TWA 15 ppm STEL	490 mg/kg	>170 mg/m³
May also contain:							
Sulphur	7704-34-9	<0.0015	NAv	NAv	NAv	>8.4 mg/kg	NAv

Fuel oil is a complex mixture of hydrocarbons. Its exact composition depends on the source of the crude oil from which it was produced and the refining methods used. Fuel oil contains hundreds of individual organic chemicals. This section identifies only some of the well-known chemical constituents.

SECTION 3 – PHYSICAL DATA

Form	Slightly viscous, oily, liquid	**Vapour pressure**	2.12 to 26.4 mm Hg @ 21°C
Colour	Yellowish-brown	**Evaporation rate**	NAv
Odour	Kerosene-like	**Boiling point**	160 to 358°C (321 to 676°F)
Odour threshold	Not available	**Freezing point**	NAv
Specific gravity	0.830 to 0.879 @ 20°C	**pH**	NAp
Vapour density	NAv	**Coefficient of water/oil distribution**	3.3 to 7.06 (Log K_{ow})

SECTION 4 – FIRE AND EXPLOSION HAZARDS

Flammability ☒ Yes ☐ No **Conditions** Easily ignited by heat, sparks or flames.

Flash point	38 to 54°C (100 to 130°F) (cc)	**Auto ignition temperature**	257°C (494°F)
Lower flammable limit	0.6 to 1.3%	**Upper flammable limit**	6 to 7.5%

Explosion data: Sensitivity to: **Mechanical impact** Not expected to be sensitive **Static discharge** Vapour: yes

Means of extinction In general, do not extinguish fire unless flow can be stopped. Use carbon dioxide, dry chemical, or foam. Cool containers with flooding quantities of water until well after the fire is out.

Special precautions Vapour is heavier than air. It will spread along the ground & collect in low or confined areas (sewers, basements). Also travels to source of ignition and flash back. Containers may explode when heated.

Hazardous combustion products Carbon monoxide. Nitrogen oxides. PAHs and other aromatic hydrocarbons. H_2S and sulphur dioxide (SO_2) may be produced from minor amounts of sulphur in the product.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited

IRVING

MATERIAL SAFETY DATA SHEET

Product Name: Ultra Low Sulphur Diesel (3094)

SECTION 5 – REACTIVITY INFORMATION

Stability	Stable
Conditions to avoid	Sources of ignition. Static discharges. High temperatures.
Incompatible substances	Oxidizers such as peroxides, nitric acid, and perchlorates.
Hazardous decomposition products	Carbon monoxide, nitrogen oxides, and numerous aromatic hydrocarbons. H_2S and SO_2 may be produced by the minor amounts of sulfur in the product.

SECTION 6 – HEALTH HAZARD INFORMATION

Route of Entry

- ☐ **Eye**
- ☒ **Skin absorption** Fuel itself, as well as benzene & naphthalene
- ☒ **Inhalation**
- ☒ **Ingestion**

Hazardous Contact

- ☒ **Eye**
- ☒ **Skin contact**

Acute exposure

Coughing, headache, and giddiness following inhalation. Aspiration into the lungs can cause severe pneumonitis (serious lung irritation), with coughing, gagging, shortness of breath, chest pain, and/or pulmonary edema (swelling). Ingestion may produce nausea, vomiting, and cramping. Kidney effects and systemic edema have been reported after severe exposure.
Note: H_2S may offgas from the product in confined spaces, even thought the concentration of sulphur in the product is minor. H_2S is very toxic. At concentrations as low as 1 to 5 ppm, nausea and severe eye irritation may occur. Sense of smell may be impaired at about 20 ppm, with headache and respiratory tract lung irritation. At 250 to 500 ppm, potentially fatal pulmonary edema (fluid in the lungs) may occur. Dizziness, sudden (often fatal) collapse, unconsciousness, and death occur at higher concentrations. Note: Pulmonary edema may be delayed as long as 48 hours after exposure.

Chronic exposure

Kidney, gastrointestinal, blood, and skin disorders. Headache, nausea, vomiting. Fatigue, and severe nervous and respiratory system symptoms may follow survival of H_2S poisoning.

Carcinogenicity

Benzene and certain PAHs are known to be carcinogenic. Exposure to fuel oils during refining is considered "probably carcinogenic to humans".
IARC and NTP classify untreated and mildly treated mineral oils as known human carcinogens. ACGIH, EPA, NIOSH, and OSHA have not classified them.

Mutagenicity	Not known to be mutagenic
Sensitization	No
Irritancy	Skin and respiratory tract
Teratogenicity	Not available
Reproductive toxicity	Not available

Toxicologically synergistic products Other CNS depressants can be expected to produce additive or synergistic effects.

SECTION 7 – FIRST AID

Inhalation Move victim to fresh air Give artificial respiration if breathing has stopped and if a qualified AR administrator is available. Apply CPR if both pulse and breathing have stopped. Obtain medical attention immediately.

Ingestion Never give anything by mouth if the person is unconscious, rapidly losing consciousness, or convulsing. If the person is conscious, have them drink 8 to 10 ounces of water or milk to dilute the material in the stomach. Do **not** induce vomiting. If vomiting occurs spontaneously, have the person lean forward to avoid aspiration. Obtain medical attention immediately.

Eye If irritation occurs, flush eye with lukewarm, gently flowing fresh water for at least 10 minutes.

Skin Quickly and gently blot away excess chemical. Gently remove contaminated clothing and shoes under running water. Wash gently and thoroughly with water and non-abrasive soap. Obtain medical assistance.

SECTION 8 – PRECAUTIONARY MEASURES

Do not attempt rescue of an H_2S knockdown victim without the use of proper respiratory protective equipment.

Personal protective equipment	**Gloves**	Nitrile, Viton™, Polyvinylchloride, Tychem®BR/LV, or Tychem®TK preferred.
	Eye	Chemical safety goggle or face shield, as a good general safety practice.
	Respiratory	NIOSH-approved SCBA or air line respirator with escape cylinder.
	Clothing & footwear	Coveralls to prevent skin contact with product. If clothing or footwear becomes contaminated with product, completely decontaminate it before re-use, or discard it.

The information contained in this form is based on data from sources considered to be reliable but Irving Oil Limited does not guarantee the accuracy or completeness thereof. The information is provided as a service to the persons purchasing or using the material to which it refers and Irving Oil Limited expressly disclaims all liability for loss or damage including consequential loss or for injury to persons including death. The information shall not be reproduced, published or distributed in any manner without prior consent in writing of Irving Oil Limited

IRVING

MATERIAL SAFETY DATA SHEET

Product Name: Ultra Low Sulphur Diesel (3094)

Engineering controls	Enclose processes. Use local exhaust ventilation to remove vapour at its site of generation. Handle laboratory samples in a fume hood. Use mechanical ventilation in confined spaces.
Handling procedures & equipment	Avoid heating open containers of product so as to minimize vapour production and accumulation. Use non-sparking equipment, explosion-proof ventilation, and intrinsically safe electrical equipment. Ground handling equipment. Have clean emergency eyewash and shower readily available in the work area.
Leak & spill Procedure	Keep unauthorized persons away Eliminate all sources of ignition. Ventilate area. Stop leak if it can be done safely. Prevent entry into sewers, waterways, or confined spaces. Absorb or cover with dry earth, sand or other non-combustible material and use clean, non-sparking tools to transfer to container.
Waste disposal	Consult local authorities for advice.
Storage	May be stored at ambient temperatures. Containers should be vented and equipped with a flame arrester.
Shipping	Stable during transport. May be transported hot.

AMERICAN ROCK SALT
Mined with pride in the U.S.A.

MATERIAL SAFETY DATA SHEET

I. PRODUCT INFORMATION

Trade name/Synonyms:	Sodium Chloride, Salt, Halite
Chemical Name:	Sodium Chloride
CAS Number:	7647-14-5
Chemical Family:	Inorganic Salt (Alkali Metal-Halogen)
Chemical Formula:	NaCl

This material is in compliance with the Toxic Substance Control Act.

II. SUMMARY OF HAZARDS

Caution! May cause irritation to the eyes, skin and respiratory tract. In case of contact, flush eyes with water and wash skin with soap and water. If inhaled and breathing becomes difficult, remove to fresh air. If irritation persists, contact a physician.

III. CHEMICAL AND PHYSICAL PROPERTIES

The pH level corresponds to 100 grams in 1 liter H_2O @ 68° F.

Boiling Point:	257.5° F	Vapor Pressure:	2.4 mm @ 746.9° C
Melting Point:	Not Applicable	Vapor Density:	Not Applicable

P.O. Box 190 | Mt. Morris, NY 14510
Phone (888) 762-7258 - Customer Service Dept.

Sol. In Water:	317 g/l @ 60° F	Specific Gravity:	2.165 (H_2O = 1)
pH:	Not Applicable	Evaporated Rate:	Not Applicable
Appearance/Odor:		Solid White or off-white material, no odor.	

IV. HEALTH HAZARD DATE & FIRST AID PROCEDURES

Toxicity Data

Chemical Name	LD50	LC50
Sodium Chloride	3000 mg/kg, rat, oral	Not Established

IV. HEALTH HAZARD DATE & FIRST AID PROCEDURES (con't)

Eye Contact:	May cause eye irritation. In case of contact, flush eyes with water. physician if irritation persists.
Skin Contract:	May cause irritation. In case of contact, wash skin with soap and water. Call physician if irritation persists.
Skin Absorption:	Not expected to be absorbed through skin. In case of contact, flush skin with soap and water.
Inhalation:	May cause mild irritation to respiratory tract. If breathing becomes difficult, remove to fresh air. Contact physician if irritation persists.
Ingestion:	Ingestion of large amount (more than 0.1 pounds) may cause vomiting.
Chronic Effect Of Over Exposure:	No chronic local or systemic toxicity.

V. EXPOSURE CONTROL MEASURES

Eye Protection:	Desirable but not required.
Protective Gloves:	Desirable but not required.

5852437676 ARSCO Marketing American Rock Salt Company

Respiratory Protection:	Respirator unnecessary, but may be used for comfort.
Other Protection:	None
Ventilation:	Not necessary (dust collector may be used in confined spaces).
Personal Work Practices:	Establish good personal hygiene and work practices. Always wash hands and face before eating, drinking or smoking.

VI. FIRE and EXPLOSION HAZARD DATA

Flash Point:	Not combustible.	
Flammability Limits:	Lower: None	Upper: None
Fire Fighting Instruct:	Not combustible	
Fire & Explosion	None	

VII. REACTIVITY DATA

Stability:	Stable at normal temperatures and conditions of storage.
Incompatibility:	Chemical reactions occur when this product is involved with strong acids such as sulfuric or nitric.
Hazardous Products Of Decomposition's:	Hydrochloric Acid.
Hazardous Polymerization:	Will not undergo hazardous polymerization.

VIII. ENVIRONMENTAL & DISPOSAL INFORMATION

General:	No special hazards connected with leaks or spills.

5852437/676 ARSCO Marketing American Rock Salt Company 11:13:28 a.m. 10-19-2006 3/4

Action to take For spills/leaks:	Sweep up and flush with water.
Disposal Methods:	Dry land fill or dissolve in sufficient amounts or water to meet existing water quality standards

IX. PRECAUTIONS FOR SAFE HANDLING, STORAGE and USE

Store in dry area with <75% relative humidity to avoid caking.

X. SHIPPING INFORMATION

Not regulated for transportation purposes.

All statements, technical information and recommendations contained herein are, to the best of our knowledge, reliable and accurate, however, no warranty, either express or implied, is made with respect thereto, nor will any liability be assumed for damages resultant from the use of the material described.

It is the responsibility of the user to comply with all applicable federal, state and local laws and regulations. It is also the responsibility of the user to maintain a safe workplace. The user should consider the health hazards and safety information provided herein as a guide and should take the necessary steps to instruct employees and to develop work practice procedures to ensure a safe work environment.

This information is not intended as a license to operate under, or a recommendation to practice or infringe upon any patent of the Company or others covering any process, composition of matter of use.

RECEIVED SEP 19 2006

HESS

MATERIAL SAFETY DATA SHEET

No. 2 Fuel Oil **MSDS No. 0088**

EMERGENCY OVERVIEW

CAUTION!

OSHA/NFPA COMBUSTIBLE LIQUID - SLIGHT TO MODERATE IRRITANT - EFFECTS CENTRAL NERVOUS SYSTEM - HARMFUL OR FATAL IF SWALLOWED

Moderate fire hazard. Avoid breathing vapors or mists. May cause dizziness and drowsiness. May cause moderate eye irritation and skin irritation. Long-term, repeated exposure may cause skin cancer.

If ingested, do NOT induce vomiting, as this may cause chemical pneumonia (fluid in the lungs).

NFPA 704 (Section 16)

1. CHEMICAL PRODUCT and COMPANY INFORMATION

Hess Corporation
1 Hess Plaza
Woodbridge, NJ 07095-0961

EMERGENCY TELEPHONE NUMBER (24 hrs): **CHEMTREC (800) 424-9300**
COMPANY CONTACT (business hours): Corporate Safety (732) 750-6000
MSDS Internet Website: www.hess.com
(See Environment, Health, Safety & Social Responsibility)

SYNONYMS: #2 Heating Oil; 2 Oil; Off-road Diesel Fuel

See Section 16 for abbreviations and acronyms.

2. COMPOSITION and INFORMATION ON INGREDIENTS

INGREDIENT NAME (CAS No.)	CONCENTRATION PERCENT BY WEIGHT
#2 Fuel Oil (68476-30-2)	100
Naphthalene (91-20-3)	Typically 0.1

A complex combination of hydrocarbons with carbon numbers in the range C9 and higher produced from the distillation of petroleum crude oil.

3. HAZARDS IDENTIFICATION

EYES
Contact with eyes may cause mild irritation.

SKIN
Practically non-toxic if absorbed following acute (single) exposure. May cause skin irritation with prolonged or repeated contact. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are repeatedly exposed.

INGESTION
The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death.

Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

INHALATION
Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

WARNING: the burning of any hydrocarbon as a fuel in an area without adequate ventilation may result in hazardous levels of combustion products, including carbon monoxide, and inadequate oxygen levels, which may cause unconsciousness, suffocation, and death.

CHRONIC EFFECTS and CARCINOGENICITY
Similar products have produced skin cancer and systemic toxicity in laboratory animals following repeated applications. The significance of these results to human exposures has not been determined - see Section 11 Toxicological Information.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE
Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash).

4. FIRST AID MEASURES

EYES
In case of contact with eyes, immediately flush with clean, low-pressure water for at least 15 min. Hold eyelids open to ensure adequate flushing. Seek medical attention.

SKIN
Remove contaminated clothing. Wash contaminated areas thoroughly with soap and water or with waterless hand cleanser. Obtain medical attention if irritation or redness develops.

INGESTION
DO NOT INDUCE VOMITING. Do not give liquids. Obtain immediate medical attention. If spontaneous vomiting occurs, lean victim forward to reduce the risk of aspiration. Monitor for breathing difficulties. Small amounts of material which enter the mouth should be rinsed out until the taste is dissipated.

INHALATION
Remove person to fresh air. If person is not breathing, provide artificial respiration. If necessary, provide additional oxygen once breathing is restored if trained to do so. Seek medical attention immediately.

5. FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES:

FLASH POINT:	100 °F (38 °C) minimum PMCC
AUTOIGNITION POINT:	494 °F (257 °C)
LOWER EXPLOSIVE LIMIT (%):	0.6
UPPER EXPLOSIVE LIMIT (%):	7.5

FIRE AND EXPLOSION HAZARDS
OSHA and NFPA Class 2 COMBUSTIBLE LIQUID (see Section 14 for transportation classification). Vapors may be ignited rapidly when exposed to heat, spark, open flame or other source of ignition. When mixed with air and exposed to an ignition source, flammable vapors can burn in the open or explode in confined spaces. Being heavier than air, vapors may travel long distances to an ignition source and flash back. Runoff to sewer may cause fire or explosion hazard.

EXTINGUISHING MEDIA

SMALL FIRES: Any extinguisher suitable for Class B fires, dry chemical, CO2, water spray, fire fighting foam, or Halon.

LARGE FIRES: Water spray, fog or fire fighting foam. Water may be ineffective for fighting the fire, but may be used to cool fire-exposed containers.

FIRE FIGHTING INSTRUCTIONS

Small fires in the incipient (beginning) stage may typically be extinguished using handheld portable fire extinguishers and other fire fighting equipment.

Firefighting activities that may result in potential exposure to high heat, smoke or toxic by-products of combustion should require NIOSH/MSHA- approved pressure-demand self-contained breathing apparatus with full facepiece and full protective clothing.

Isolate area around container involved in fire. Cool tanks, shells, and containers exposed to fire and excessive heat with water. For massive fires the use of unmanned hose holders or monitor nozzles may be advantageous to further minimize personnel exposure. Major fires may require withdrawal, allowing the tank to burn. Large storage tank fires typically require specially trained personnel and equipment to extinguish the fire, often including the need for properly applied fire fighting foam.

See Section 16 for the NFPA 704 Hazard Rating.

6. ACCIDENTAL RELEASE MEASURES

ACTIVATE FACILITY'S SPILL CONTINGENCY OR EMERGENCY RESPONSE PLAN.

Evacuate nonessential personnel and remove or secure all ignition sources. Consider wind direction; stay upwind and uphill, if possible. Evaluate the direction of product travel, diking, sewers, etc. to confirm spill areas. Spills may infiltrate subsurface soil and groundwater; professional assistance may be necessary to determine the extent of subsurface impact.

Carefully contain and stop the source of the spill, if safe to do so. Protect bodies of water by diking, absorbents, or absorbent boom, if possible. Do not flush down sewer or drainage systems, unless system is designed and permitted to handle such material. The use of fire fighting foam may be useful in certain situations to reduce vapors. The proper use of water spray may effectively disperse product vapors or the liquid itself, preventing contact with ignition sources or areas/equipment that require protection.

Take up with sand or other oil absorbing materials. Carefully shovel, scoop or sweep up into a waste container for reclamation or disposal. Response and clean-up crews must be properly trained and must utilize proper protective equipment (see Section 8).

7. HANDLING and STORAGE

HANDLING PRECAUTIONS

Handle as a combustible liquid. Keep away from heat, sparks, excessive temperatures and open flame! No smoking or open flame in storage, use or handling areas. Bond and ground containers during product transfer to reduce the possibility of static-initiated fire or explosion.

Special slow load procedures for "switch loading" must be followed to avoid the static ignition hazard that can exist when this product is loaded into tanks previously containing low flash point products (such as gasoline) - see API Publication 2003, "Protection Against Ignitions Arising Out Of Static, Lightning and Stray Currents."

STORAGE PRECAUTIONS
Keep containers closed and clearly labeled. Use approved vented storage containers. Empty product containers or vessels may contain explosive vapors. Do not pressurize, cut, heat, weld or expose such containers to sources of ignition.

Store in a well-ventilated area. This storage area should comply with NFPA 30 "Flammable and Combustible Liquid Code". Avoid storage near incompatible materials. The cleaning of tanks previously containing this product should follow API Recommended Practice (RP) 2013 "Cleaning Mobile Tanks In Flammable and Combustible Liquid Service" and API RP 2015 "Cleaning Petroleum Storage Tanks."

WORK/HYGIENIC PRACTICES
Emergency eye wash capability should be available in the near proximity to operations presenting a potential splash exposure. Use good personal hygiene practices. Avoid repeated and/or prolonged skin exposure. Wash hands before eating, drinking, smoking, or using toilet facilities. Do not use as a cleaning solvent or harsh abrasive skin cleaners for washing this product from exposed skin areas. Waterless hand cleaners are effective. Promptly remove contaminated clothing and launder before reuse. Use care when laundering to prevent the formation of flammable vapors which could ignite via washer or dryer. Consider the need to discard contaminated leather shoes and gloves.

8. EXPOSURE CONTROLS and PERSONAL PROTECTION

EXPOSURE LIMITS

Components (CAS No.)	Source	Exposure Limits TWA/STEL	Note
#2 Fuel Oil (68476-30-2)	OSHA	5 mg/m^3 (as mineral oil mist) TWA	
	ACGIH	0.2 mg/m^3 (as mineral oil) TWA	A2, skin
Naphthalene (91-20-3)	OSHA	10 ppm TWA	
	ACGIH	10 ppm TWA / 15 ppm STEL	A4, Skin

ENGINEERING CONTROLS
Use adequate ventilation to keep vapor concentrations of this product below occupational exposure and flammability limits, particularly in confined spaces.

EYE/FACE PROTECTION
Safety glasses or goggles are recommended where there is a possibility of splashing or spraying.

SKIN PROTECTION
Gloves constructed of nitrile, neoprene, or PVC are recommended. Chemical protective clothing such as of E.I. DuPont TyChem®, Saranex® or equivalent recommended based on degree of exposure. Note: The resistance of specific material may vary from product to product as well as with degree of exposure. Consult manufacturer specifications for further information.

RESPIRATORY PROTECTION
A NIOSH/MSHA-approved air-purifying respirator with organic vapor cartridges or canister may be permissible under certain circumstances where airborne concentrations are or may be expected to exceed exposure limits or for odor or irritation. Protection provided by air-purifying respirators is limited. Refer to OSHA 29 CFR 1910.134, NIOSH Respirator Decision Logic, and the manufacturer for additional guidance on respiratory protection selection.

Use a positive pressure, air-supplied respirator if there is a potential for uncontrolled release, exposure levels are not known, in oxygen-deficient atmospheres, or any other circumstance where an air-purifying respirator may not provide adequate protection.

MATERIAL SAFETY DATA SHEET

No. 2 Fuel Oil **MSDS No. 0088**

9. PHYSICAL and CHEMICAL PROPERTIES

APPEARANCE
Red or reddish/orange colored (dyed) liquid

ODOR
Mild, petroleum distillate odor

BASIC PHYSICAL PROPERTIES

BOILING RANGE:	340 to 700 °F (171 to 371 °C)
VAPOR PRESSURE:	0.009 psia @ 70 °F (21 °C)
VAPOR DENSITY (air = 1):	> 1.0
SPECIFIC GRAVITY (H_2O = 1):	AP 0.87
PERCENT VOLATILES:	100 %
EVAPORATION RATE:	Slow; varies with conditions
SOLUBILITY (H_2O):	Negligible

10. STABILITY and REACTIVITY

STABILITY: Stable. Hazardous polymerization will not occur

CONDITIONS TO AVOID and INCOMPATIBLE MATERIALS
Avoid high temperatures, open flames, sparks, welding, smoking and other ignition sources. Keep away from strong oxidizers; Viton ®; Fluorel ®

HAZARDOUS DECOMPOSITION PRODUCTS
Carbon monoxide, carbon dioxide and non-combusted hydrocarbons (smoke).

11. TOXICOLOGICAL PROPERTIES

ACUTE TOXICITY
Acute Oral LD50 (rat): 14.5 ml/kg
Acute Dermal LD50 (rabbit): > 5 ml/kg
Guinea Pig Sensitization: negative
Primary dermal irritation: moderately irritating (Draize mean irritation score - 3.98 rabbits)
Draize eye irritation: mildly irritating (Draize score, 48 hours, unwashed - 2.0 rabbits)

CHRONIC EFFECTS AND CARCINOGENICITY
Carcinogenic: IARC: NO NTP: NO OSHA: NO ACGIH: A2
Dermal carcinogenicity: positive - mice

Studies have shown that similar products produce skin tumors in laboratory animals following repeated applications without washing or removal. The significance of this finding to human exposure has not been determined. Other studies with active skin carcinogens have shown that washing the animal's skin with soap and water between applications reduced tumor formation.

This product is similar to Diesel Fuel. IARC classifies whole diesel fuel exhaust particulates as probably carcinogenic to humans (Group 2A) and NIOSH regards it as a potential cause of occupational lung cancer based on animal studies and limited evidence in humans.

MUTAGENICITY (genetic effects)
Material of similar composition has been positive in a mutagenicity study.

12. ECOLOGICAL INFORMATION

Keep out of sewers, drainage areas and waterways. Report spills and releases, as applicable, under Federal and State regulations.

HESS

MATERIAL SAFETY DATA SHEET

No. 2 Fuel Oil **MSDS No. 0088**

13. DISPOSAL CONSIDERATIONS

Consult federal, state and local waste regulations to determine appropriate disposal options.

14. TRANSPORTATION INFORMATION

PROPER SHIPPING NAME:	FUEL OIL, NO. 2
HAZARD CLASS & PACKING GROUP:	3, PG III
DOT IDENTIFICATION NUMBER:	NA 1993
DOT SHIPPING LABEL:	FLAMMABLE LIQUID

Placard:

May be reclassified for transportation as a COMBUSTIBLE LIQUID under conditions of DOT 49 CFR 173.120(b)(2).

15. REGULATORY INFORMATION

U.S. FEDERAL, STATE, and LOCAL REGULATORY INFORMATION

This product and its constituents listed herein are on the EPA TSCA Inventory. Any spill or uncontrolled release of this product, including any substantial threat of release, may be subject to federal, state and/or local reporting requirements. This product and/or its constituents may also be subject to other regulations at the state and/or local level. Consult those regulations applicable to your facility/operation.

CLEAN WATER ACT (OIL SPILLS)

Any spill or release of this product to "navigable waters" (essentially any surface water, including certain wetlands) or adjoining shorelines sufficient to cause a visible sheen or deposit of a sludge or emulsion must be reported immediately to the National Response Center (1-800-424-8802) as required by U.S. Federal Law. Also contact appropriate state and local regulatory agencies as required.

CERCLA SECTION 103 and SARA SECTION 304 (RELEASE TO THE ENVIRONMENT)

The CERCLA definition of hazardous substances contains a "petroleum exclusion" clause which exempts crude oil, refined, and unrefined petroleum products and any indigenous components of such. However, other federal reporting requirements (e.g., SARA Section 304 as well as the Clean Water Act if the spill occurs on navigable waters) may still apply.

SARA SECTION 311/312 - HAZARD CLASSES

ACUTE HEALTH	CHRONIC HEALTH	FIRE	SUDDEN RELEASE OF PRESSURE	REACTIVE
X	X	X	--	--

SARA SECTION 313 - SUPPLIER NOTIFICATION

This product may contain listed chemicals below the *de minimis* levels which therefore are not subject to the supplier notification requirements of Section 313 of the Emergency Planning and Community Right-To-Know Act (EPCRA) of 1986 and of 40 CFR 372. If you may be required to report releases of chemicals listed in 40 CFR 372.28, you may contact Hess Corporate Safety if you require additional information regarding this product.

CALIFORNIA PROPOSITON 65 LIST OF CHEMICALS

This product contains the following chemicals that are included on the Proposition 65 "List of Chemicals" required by the California Safe Drinking Water and Toxic Enforcement Act of 1986:

INGREDIENT NAME (CAS NUMBER)	Date Listed
Residual Fuel Oil (no CAS Number listed)	10/01/1990

CANADIAN REGULATORY INFORMATION (WHMIS)

Notification for Underground Storage Tanks

CPPU USE ONLY
App #:
Doc #:
Check #:
Program: UST

Please complete this form, in accordance with the instructions (DEEP-UST-INST-001) to ensure the proper handling of your notification. Print or type unless otherwise noted.

Submit one notification form per site.

Part I: Notification and Fee Type

Check the appropriate box(es) identifying the notification type.

1. LOCATION of UST(s)

Name of site: **Hartford-Brainard Airport**

Street Address or Location Description: **251 Maxim Road**

City/Town: **Hartford** State: **CT** Zip Code: **06114-1607**

2. Site ID Number: 64-8620

3. This notification is for: choose i, ii, iii **or** iv	**Fee (a)**	**No. of Fee exempt tanks ($0) (b)**	***No. of Tanks excluding (b) (c)**	**Total Fee = (a x c)**
☐ i) first time site notification [new] **(Complete entire application)**	$100.00/ tank [#1032]			
☐ ii) annual notification [renewal] with **NO** modifications **(Complete Parts I and VII only)**	$100.00/ tank [#1032]			
☐ iii) annual notification [renewal] **with** modifications, (specify modifications under iv below) **(Complete Parts I and VII and modifications only)**	$100.00/ tank [#1032]			
☒ iv) a modification to an existing notification; check any of the following to specify. **(Complete Parts I and VII and modifications only)**				
☐ adding new UST system (Part IV)	$100.00/ tank [#1032]			

Part I: Notification and Fee Type (continued)

3. (modifications continued)	Fee (a)	No. of Fee exempt tanks ($0) (b)	*No. of Tanks excluding (b) (c)	Total Fee = (a x c)
☐ adding an orphan UST system (newly discovered) (Part IV)	$100.00/ tank [#1032]			
☒ update/correction to Part II: owner/operator info/financial responsibility	$0			
☐ transfer of ownership (Part II)	$0			
☐ update/correction to Part III: record info	$0			
☐ update/correction to Part IV: UST system info	$0			
☐ Permanent Closure of an UST system (Part V)	$0			
Compartmentalized tanks are counted as one tank. ***Manifolded or interconnected tanks count as separate tanks***			*Total Fee	0

*For municipalities, the 50% discount applies. The notification will not be processed without the fee. The fee shall be non-refundable and shall be paid by check or money order to the Department of Energy and Environmental Protection.

Part II: Owner/Operator Information

- **If an Owner/Operator is a corporation, limited liability company, limited partnership, limited liability partnership, or a statutory trust, it must be registered with the Secretary of State. If applicable, the applicant's name shall be stated **exactly** as it is registered with the Secretary of State. Please note, for those entities registered with the Secretary of State, the registered name will be the name used by DEEP.* This information can be accessed at *the Secretary of State's database (CONCORD).* (**www.concord-sots.ct.gov/CONCORD/index.jsp**)
- *If an Owner/Operator is an individual, provide the legal name (include suffix) in the following format: First Name; Middle Initial; Last Name; Suffix (Jr, Sr., II, III, etc.).*

1. **UST Owner Name:** Connecticut Airport Authority

   This affiliate is the registrant (check if true): ☒

   Mailing Address: Bradley International Airport, Administrative Office, Terminal A - 3rd Floor

   City/Town: Windsor Locks State: CT Zip Code: 06096

   Business Phone: (860) 292-2054 ext.:

   Contact Person: Kevin Dillon Phone: ext.

   *E-mail: kdillon@ctairports.org

   *By providing this e-mail address you are agreeing to receive official correspondence from the department, at this electronic address, concerning the subject application. Please remember to check your security settings to be sure you can receive e-mails from "ct.gov" addresses. Also, please notify the department if your e-mail address changes.

Part II: Owner/Operator Information

a) Business Type (check one):

☐ individual ☐ federal agency ☒ state agency ☐ municipality ☐ **tribal

☐ *business entity (*If a business entity complete i through ii):

i) provide Secretary of the State business ID #:_____This information can be accessed at *the Secretary of State's database (CONCORD).* **(www.concord-sots.ct.gov/CONCORD/index.jsp)**

ii) ☐ Check here if your business is **NOT** registered with the Secretary of State's office.

**Notification or fee is NOT required for UST systems located on tribal lands.*

2. UST Operator, if different than UST owner

Name:

Mailing Address:

City/Town: State: Zip Code:

Business Phone: ext.:

Contact Person: Phone: ext.

*E-mail:

a) Business Type (check one):

☐ individual ☐ federal agency ☐ state agency ☐ municipality ☐ **tribal

OR

☐ retraining ordered for non-compliance

Certification Expiration Date: **01/08/2017**

Class B Operator's Signature: Robert J Bruno

Part II: Owner/Operator Information (continued)

8. **Financial Mechanism(s):** Complete the table below identifying the financial assurance mechanism(s) used to demonstrate financial responsibility as specified in the Federal Register. Use the list of surety types below. If an 'other method' is chosen, please specify the method in the table.

A. Self Insurance	E. Guarantee	I. Trust Fund
B. Commercial Insurance	F. Surety Bond	J. *State Fund
C. Risk Retention Group	G. Letter of Credit	K. Other Method (specify in table below)
D. Local Government Financial Test	H. Bond Rating Test	

*Pursuant to section 262 of Public Act 12-1 of the June 12th Special Session, the state fund (UST Petroleum Clean-Up Program) will cease to serve as a financial responsibility mechanism on:

- October 1, 2012, for those who own or operate USTs on more than five separate sites; and
- October 1, 2013 for municipalities and for those who own or operate USTs on five or less separate sites.

Name of Insurer	Policy #	Surety Type (insert letter from list above or specify)	Amount of Coverage	Period of Coverage
Great American E & S Insurance Company	**PREL190319201**	**B.**	**20,000,000**	**7/1/2014 - 7/1/2017**

Owners/Operators shall complete the attached "*Certification of Financial Responsibility Form*" and maintain such completed form at the facility where the storage tank system(s) are located. **THIS FORM DOES NOT NEED TO BE SUBMITTED but must be updated to reflect any changes.**

Part III: Record Information

Off- Site Storage of Records at a Centralized Location

Does the owner/operator **of more than 10 facilities with UST systems** request to store **certain** records at a centralized location? ☐ Yes ☐ No

If yes, provide the central location address below.

Name of Location:

Address:

City/Town: State: Zip Code:

Such records must be immediately available for inspection by the commissioner or the commissioner's designee at any such central location. Please refer to section 22a-449 q CGS; for storage of underground storage tank system records that may be kept at a centralized location or that must be kept on site.

Part IV: Underground Storage Tank Information

Complete for all tanks and piping at the subject location. Begin by labeling tanks (including compartments, if applicable). Label tanks as required by the instructions. . If you have more than 5 tanks in one location, reproduce this section and complete for additional tanks. **You must read the instructions (DEEP-UST-INST-001) in order to properly complete this Part.**

Tank Identification Number *(see instructions)*	Tank No.: U-1	Tank No.: D-2	Tank No.:	Tank No.:	Tank No.:
Part of a compartmentalized tank	☐	☐	☐	☐	☐
Part of a manifolded or interconnected tank	☐	☐	☐	☐	☐
Complete items 1 through 5 for the entire tank- you do not have to complete the columns labeled for compartments.					
1. Status of Tank Currently in Use	☒	☒	☐	☐	☐
Temporarily Closed	☐	☐	☐	☐	☐
Date Temporarily Closed					
Permanently Closed *(check here and skip to Part V)*	☐	☐	☐	☐	☐

Signature of UST Installer Date

Part VII: Owner/Operator Certification

The owner/operator *and* the individual(s) responsible for actually preparing the notification must sign this part. A notification will be considered incomplete unless all required signatures are provided.

"I have personally examined and am familiar with the information submitted in this document and all attachments thereto, and I certify that based on reasonable investigation, including my inquiry of the individuals responsible for obtaining the information, the submitted information is true, accurate and complete to the best of my knowledge and belief.

I understand that a false statement in the submitted information may be punishable as a criminal offense, in accordance with section 22a-6 of the General Statutes, pursuant to section 53a-157b of the General Statutes, and in accordance with any other applicable statute.

I certify that I have completed a *Certification of Financial Responsibility Form* and such completed form is maintained on-site.

I also certify that this underground storage tank notification is on complete and accurate forms as prescribed by the commissioner without alteration of the text."

Kevin A Dillon	1/14/15
Signature of Owner/Operator	Date
Kevin A. Dillon, A.A.E.	Executive Director, CAA
Name of Owner/Operator (print or type)	Title (if applicable)
Sally H. Snyder	1/12/15
Signature of Preparer (if different than above)	Date
Sally H. Snyder	Environmental Analyst 3
Name of Preparer (print or type)	Title (if applicable)

☐ Check here if additional signatures are required. If so, please reproduce this sheet and attach signed copies to this sheet.

Note: Please submit a completed Underground Storage Tank Notification and all Supporting Documents to:

CENTRAL PERMIT PROCESSING UNIT
DEPARTMENT OF ENERGY AND ENVIRONMENTAL PROTECTION
79 ELM STREET
HARTFORD, CT 06106-5127

A copy of all completed Notification Forms must be maintained on site and the most recent completed form must also be forwarded to the local fire marshal.

If you have any questions, please contact the UST Program at 860-424-3374 or by e-mail (DEEP.USTFee@ct.gov)

June 20,1933

Mr. Thomas F. Foley,
Deputy Sponsor's Representative
Municipal Building
Hartford,Conn.,

Dear Sir:

With reference to your letter of June 19,1933, requesting a modification of Building Code ruling relative to buildings at Brainard Field, we would advise that the Building Commission has granted permission to relocate existing all metal hangar in accordance with plans submitted.

In this connection your attention is called to the following requirements which must be complied with:

1. Any portion of this building designed or intended to be used for other than hangar purposes shall be separated from the rest of the building by a standard fire wall and any opening from hangar portion to such portion shall be protected by approved fire door of self closing type.

2. The area of any unit used for any purpose other than the storage of planes shall not exceed twenty per cent of the building area, such area to be measured inside exterior walls.

Very truly yours,

Building Supervisor.

F.H. McGraw Company
525 Main St.
Hartford,Conn.,

Dear Sir:

We are returning herewith your check in the amount of $32.00 for final cost on Aviation Building at Brainard Field as there is a slight error on same.

Estimated figures were $53,000 and actual cost was $62,000 leaving a difference of $9,000 which is figured at $4.00 per thousand. At that rate your check should be for $36.00 instead of $32.00.

We would appreciate you sending corrected check at your earliest convenience.

Very truly yours,

Building Inspector.

GEI Consultants

Consulting Engineers and Scientists

September 22, 2021
Project 1703638

VIA EMAIL: nicholas.casparino@hartford.gov

Mr. Nick Casparino, PE, Civil Engineer
Department of Public Works
50 Jennings Road
Hartford, CT 06120

Dear Mr. Casparino:

Re: Hartford Flood Control System
Toe Drain and Toe Ditch Repair Project
Soil Sampling and Testing Program

This letter provides a summary of GEI Consultants, Inc.'s limited soil sampling and testing program for the Toe Drain/Toe Ditch project in the South Meadows area.

GEI's scope was geared toward testing of the Toe Ditch sediments and the stockpile at Maxim Road. Although not part of GEI's scope, we also collected one composite sample from a typical Toe Drain excavation area. This limited program was intended to provide a general indication of the extent of impacted soils that will be encountered in the construction phase of the project. GEI collected soil samples on September 8, 2021. This involved collection of 10 individual samples that were then combined in pairs into 5 composite samples ("COMP") that were lab tested.

The samples were collected at the following locations and were composited as indicated.

- COMP 1: Toe Ditch Stations 14+00 and 18+00
- COMP 2: Toe Ditch Stations 31+00 and 40+00
- COMP 3: Toe Ditch Stations 45+00 and 65+00
- COMP 4: Toe Drain Stations 50+00 and 61+00
- STOCK : Stockpile at Station 117+00 (Maxim Road)

The 5 composite samples were prepared and submitted to Phoenix Environmental Laboratories, Inc. for analysis of the following parameters:

- Metals – RSR 15 (SW6010D and SW7471 for mercury).
- TCLP Metals (RCRA-8 metals only).
- Volatile organic compounds (SW8260C).
- Semi-volatile organic compounds (SW8270D).
- Total petroleum hydrocarbons (CT ETPH Method).

GEI Consultants, Inc.
455 Winding Brook Drive, Suite 201, Glastonbury, CT 06033
860.368.5300

- Polychlorinated biphenyls (SW8082A).
- Pesticides (SW8081B).
- Herbicides (SW8151A).
- Conductivity, pH, ignitability, and reactivity.

Note: SW refers to EPA methods in test manual SW-846.

The lab test results are included in Attachment A "South Meadows Soil Test Results Hartford Levee" have been attached to this memo for detailed review. Individual results which exceed criteria have been highlighted via color coding for ease of review. GEI has reviewed the test results and we have generally summarized the results below:

1. Constituents were detected in all samples at concentrations above natural background levels and/or DEEP remediation criteria.
2. Soils classified as polluted (i.e. with concentrations above natural background levels and below DEEP criteria) were only encountered in the soil stockpile (STOCK1).
3. Samples exceeding DEEP criteria for contaminated soils were identified in the 3 Toe Ditch samples and 1 Toe Drain sample (COMP 1, COMP 2, COMP 3, and COMP 4).
4. PCBs were only detected in sample COMP 4 at 2.5 mg/kg, which is above DEEP criteria, but not above the level that would require disposal in a TSCA permitted landfill.
5. Metals were detected above background levels or DEEP criteria in all samples except STOCK1.
6. Total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) were only detected in sample COMP 4 (Toe Drain location).
    - TPH was detected at 11,000 mg/kg, which is above DEEP criteria.
    - VOC concentrations exceeded background levels, but not DEEP criteria.
    - VOCs detected included petroleum related constituents.
7. Semi-volatile organic compounds (SVOCs), comprised of polycyclic aromatic hydrocarbons (PAHs), were detected above background levels in all samples except COMP 1 and above DEEP criteria in samples COMP 3 and COMP 4.
8. Pesticides were only detected in sample COMP 2 at concentrations above DEEP criteria. Herbicides were not detected in any of the samples.
9. None of the above concentrations were high enough to classify any of the soil as a hazardous waste.

Based on this limited testing program, GEI has identified the following general guidance for consideration in implementing the construction process:

1. Soils classified as Contaminated must be disposed of off-site.
2. Soils classified as Polluted are allowed by regulation to be reused on site, however they would need to have suitable physical properties. Permanent placement of the soil on site is another option, although it is not known if suitable areas exist to "lose" a significant quantity of soil on site.

3. As a practical matter, the majority of the polluted soil, and all of the contaminated soil will need to be disposed of off-site.
4. Additional sampling and testing are recommended to better quantify the extent of the impacted soils. This could be done either during the pre-construction phase or could be assigned to the construction contractor. The contractor will need to provide up-to-date test results to any outside facilities who receive impacted soils for disposal.
5. GEI will provide bid specifications for handling and disposal of impacted soils as well as soil stockpile general location layout plans and details.

Please feel free to contact us if you would like to discuss this further.

Sincerely,

GEI CONSULTANTS, INC.

RE: Citizen Compliant regarding Brainard Airport

Dear Ms. Peterson,

The Connecticut Department of Energy and Environmental Protection (DEEP) has received your email of April 28, 2022 expressing concern about contamination of soil, groundwater and surface water at the Brainard Airport property located at 233 Maxim Road in Hartford (the Site). My staff reviewed DEEP's files from the Remediation and the Emergency Response and Spill Prevention Divisions. This review found 28 documented releases of petroleum have been reported at the airport from 1996 to 2007. These incidents involved releases of fuel or oil to the ground surface and ranged from 1 gallon to 300 gallons in volume. Corrective measures were implemented for each reported release to mitigate the contamination.

DEEP's Remediation Division is aware of known sources of pollution in soil at one or more properties located near the site, of which three sources are immediately adjacent to the western border of the site. The three areas contain soil polluted with arsenic and PCBs that is covered by an engineered control and is protected from future disturbance through the presence of Environmental Land Use Restrictions on the land records of the subject property that prevents incompatible activities. The concentrations of arsenic and PCBs in these areas do not pose a threat to the quality of groundwater or stormwater runoff.

To fully characterize the environmental condition of the site, a site-wide investigation would need to be conducted. A Phase I Environmental Site Assessment (ESA) is the first step which evaluates the likelihood of contamination on-site with actions such as historical use reviews and visual observations to determine if pollution is present or likely. If the Phase I indicates that release(s) of pollution may have occurred, a Phase II ESA would be performed to assess if contamination is in fact present on-site through collection and analysis of environmental samples. If contamination is documented on-site following the Phase II, a Phase III ESA is needed to determine the extent and degree of the contamination so that a remedial plan can be designed.

If an environmental investigation of the airport property is conducted and sources of pollution are detected, the property owner and/or originator of the pollution has an obligation to remediate such pollution in accordance with the Remediation Standard Regulations.

If you would like to discuss this matter in more detail, please contact Ray Frigon, Assistant Director of DEEP's Remediation Division at 860-424-3797.

Sincerely,

Graham J. Stevens
Bureau Chief
Bureau of Water Protection and Land Reuse

GENERAL NOTES

1) ALL WORK SHALL COMPLY WITH THE NATIONAL FIRE PROTECTION ASSOCIATION, THE DEPARTMENT OF ENVIRONMENTAL PROTECTION REGULATIONS, THE NATIONAL ELECTRICAL CODE BY THE NATIONAL BOARD OF FIRE UNDERWRITERS, AND THE STATE OF CONNECTICUT BUILDING CODE AND REGULATIONS.

2) EXISTING PRODUCT IN THE TANKS SHALL BE PUMPED OUT BY THE STATE OF CT. PRIOR TO START OF CONSTRUCTION.

3) CONTRACTOR SHALL BE RESPONSIBLE FOR PUMPING OUT REMAINING RESIDUE.

ewide Underground Storage Tank Program
W Project #: BI-2B-760-B335 (A334)
Army National Guard OMS-7A, Brainard Field, Hartford

n,

ed please find the report of activities at the subject site, prepared by Fuss & O'Neill, Inc. We have ewed this report and concur with its recommendations.

Final contamination levels for the fuel point tanks (5K gal. gasoline / 3K gal. diesel) were found to be below prescribed action levels. Therefore, we are considering this closure of these tanks.

The heating fuel tank's grave results were all below prescribed action levels. However, one pipe trench sample field screened with PetroFLAG below action level, but the laboratory 418.1 was 1280 mg/kg. We do not intend to pursue further investigation of this site, although it not in complete compliance with the RSR's. We are basing our decision on the facts that: this sample field screened below action level, there was no visible indication of contamination in the excavation, the potential extent of the contamination is extremely limited, the entire vicinity is covered with bituminous paving, and the armory is in an industrial/commercial area and in a GB zone. Please let me know if you disagree with this approach.

The submission of this report is intended to fulfill our obligation for release reporting in accordance w RCSA 22a-449(d)-105 and corrective action in accordance with RCSA 22a-449(d)-106.

If you have any questions, or wish to discuss this matter further, feel free to contact me at (860) 71 5705.

Sincerely,

Joseph V. Cassidy, P.E.

RE: Statewide Underground Storage Tank Program
DPW Project No. BI-2B-760-B335
Brainard OMS-7A (Site A334)
Hartford, Connecticut
Tank Removal Report
Gasoline, Diesel, and Heating-Oil USTs

Dear Mr. Cassidy:

Enclosed please find a summary of our findings and recommendations associated with the removal of one 2,000-gallon gasoline UST, one 3,000-gallon diesel UST, and 5,000-gallon heating-oil UST at the above-referenced site. The tank report and associated analytical data for each tank grave are enclosed. The tanks were removed by Kessler Installation Corporation on September 14 and 16, 1998, as part of the Connecticut DPW Statewide Underground Storage Tank Program.

Please note that Fuss & O'Neill, Inc., has been unable to obtain the soil and tank disposal documentation from the contractor. DPW should follow-up on this disposal documentation to assure that proper disposal procedures are being followed.

Should you have any questions or comments, please do not hesitate to call.

Sincerely,

Allyn Foss
Project Hydrogeologist

Andrew R. Zlotnick, LEP
Senior Hydrogeologist

CONCLUSIONS (check all that apply)

TANK ID # 2,000 Gallon Gasoline UST

Soil

__X__ Initial soil sample results indicate all contaminant concentrations are below action levels.

_____ Initial soil sample results or field screening results indicate contamination above action levels, but additional soil was removed and final soil samples indicate all contaminant concentrations are below action levels.

_____ Soil contamination persists above action levels because of the following:

- _____ Physical limitations (i.e. utilities, structures, etc.; see sketch).
- _____ Soil contamination extends into the saturated zone.
- _____ Contamination is extensive and other remedial options will be evaluated.

Disposition of Excavated Soil

__X__ Polluted soil was re-used on the parcel in substantial accordance with RSCA §22a-133k(2)(h).

_____ Polluted soil was disposed of off-site as contaminated.

_____ Contaminated soil was disposed of off-site.

Tank-grave Water

__X__ Tank-grave water not evaluated.

_____ Tank-grave water analysis indicates contaminant concentrations below action levels.

_____ Tank-grave water analysis indicates contaminant concentrations in excess of action levels.

RECOMMENDATIONS

__X__ No further investigation or remediation.

_____ Site does not comply with RSRs; however, immediate action is not recommended. Site should be placed on the DPW list of low-priority sites for future consideration.

_____ Site does not comply with RSRs:

- _____ Determine potential receptors.
- _____ Perform investigation in accordance with the DPW UST Program Scope of Work for Soil and Groundwater Remedial Investigations dated March 14, 1994.
- _____ Initiate an emergency response program.

CONCLUSIONS (check all that apply)

TANK ID # 3,000-Gallon Diesel UST

Soil

__X__ Initial soil sample results indicate all contaminant concentrations are below action levels.
_____ Initial soil sample results or field screening results indicate contamination above action levels, but additional soil was removed and final soil samples indicate all contaminant concentrations are below action levels.
_____ Soil contamination persists above action levels because of the following: See Comments.
- _____ Physical limitations (i.e. utilities, structures, etc., see sketch).
- _____ Soil contamination extends into the saturated zone.
- _____ Contamination is extensive and other remedial options will be evaluated.

Disposition of Excavated Soil

__X__ Polluted soil was re-used on the parcel in substantial accordance with RSCA §22a-133k(2)(h).
_____ Polluted soil was disposed of off-site as contaminated.
_____ Contaminated soil was disposed of off-site.

Tank-grave Water

__X__ Tank-grave water not evaluated.
_____ Tank-grave water analysis indicates contaminant concentrations below action levels.
_____ Tank-grave water analysis indicates contaminant concentrations in excess of action levels.

RECOMMENDATIONS

__X__ No further investigation or remediation.
_____ Site does not comply with RSRs; however, immediate action is not recommended. Site should be placed on the DPW list of low-priority sites for future consideration.
_____ Site does not comply with RSRs:
- _____ Determine potential receptors.
- _____ Perform investigation in accordance with the DPW UST Program Scope of Work for *Soil and Groundwater Remedial Investigations* dated March 14, 1994.
- _____ Initiate an emergency response program.

RECEIVED
DEC 18 1997
WASTE MANAGEMENT BUREAU
OIL & CHEMICAL SPILL
RESPONSE DIVISION

Bureau of Waste Management
Oil and Chemical Spill Response Division

REPORT OF PETROLEUM OR CHEMICAL PRODUCT DISCHARGE, SPILLAGE OR RELEASE

1. When did the incident occur? date 11 / 30 / 1997 time 17:50
   month/ day /year

2. Where did the incident occur? Hartford-Brainard Airport

3. How did the incident occur? (Describe the cause) Plane Crash

4. Under whose control was the chemical or petroleum product at the time of the incident?

   Name: Brainard-Airport Fire Department

   Mailing address and street: 251 Maxim Rd. Hartford,Ct. 06114

   Town: Hartford State: Ct. Zip 06114 Telephone 566-6661

5. Who is the owner of the property onto which the spill occurred?

   State of Connecticut Department of transportation

   If this is a corporate property or property owned jointly who represents the owner?

   Corporate property ☐ Property owned jointly ☐

   Name: _____

   Mailing address and street: _____

   Town: _____ State: _____ Zip _____ Telephone _____

6. When was the incident verbally reported to the Department of Environmental Protection?

   Date 11 / 30 / 1997 time 19 00
   month / day / year

7. Who reported the incident and who were they representing?

   Name: Captain William Parker St.of Ct. D.O T. Brainard Airport

   Mailing address and street: 251 Maxim Rd. Hartford,Ct. 06114

   Town: Hartford State: Ct. Zip 06114 Telephone 566-6661

8. What were the chemicals or petroleum products released, spilled or discharged? Give an exact description of each of the materials involved int he incident, including chemical names, percent concentrations, trade names, etc.

   If the chemicals are Extremely Hazardous substances or CERCLA hazardous substances they must be identified as such and include the reportable quantity (RQ). Please attach a Material Safety Date Sheet (MSDS) for each chemical involved.

   What were the quantities of chemicals that were releases, spilled or discharged to each environmental medium (air, surface water, soil, groundwater)? [NOTE: Connecticut General Statutes requires the reporting of any amount of any substance or material released to the environment].

   Aviation Gasoline 100LL,Hydrocarbon,approximately 25 gallons into the soil.

9. Did any of the chemical travel beyond the property line? [NOTE: materials that enter the ground water are considered to have gone beyond the property line.]

   NONE

10. What actions were taken to respond to and contain the release, spill or discharge?

None,there was no active discharge,spill was confined to impact area.

11 What actions are being taken to prevent reoccurrence of an incident of this type?

None,airport has no control over pilot actions.

Attach additional sheets if necessary.

12. Were there any injuries as a result of the incident? If so, list the names of exposed individuals, their addresses, phone numbers and describe their injuries.

Name: NO

Mailing address and street: _____

Town: _____ State: _____ Zip _____ Telephone _____

Attach additional sheets if necessary.

13. What is the appropriate advice regarding medical attention necessary for exposured individuals?

Reference MSDS sheets

14. Are there any known or anticipated health risks, acute or chronic, associated with the release of this chemical or medical advice that should be communicated?

NO

15. Was the incident completely cleanup up by the time this report was submitted? If not, what are the anticipated remedial actions and their duration? No,spill was contained to an area 3'x3', recommended cleanup is remove contaminated soil and dispose.

16. CERTIFICATION. I hereby affirm that the foregoing statement is true to the best of my knowledge.

PRODUCT HAZARD SUMMARY

HEALTH
DANGER!
HARMFUL OR FATAL IF SWALLOWED
ASPIRATION HAZARD
VAPORS MAY BE HARMFUL
LONG-TERM EXPOSURE TO VAPORS HAS CAUSED CANCER IN SOME LABORATORY ANIMALS
MAY BE IRRITATING TO THE SKIN, EYES AND RESPIRATORY TRACT

FLAMMABILITY
DANGER!
EXTREMELY FLAMMABLE LIQUID
VAPORS MAY EXPLODE

REACTIVITY
STABLE

PRODUCT HEALTH HAZARD INFORMATION

EFFECTS OF OVEREXPOSURE

INGESTION:
MODERATELY TOXIC. Human oral LDLo = ~10-30 gms. Aspiration into lungs may cause

*Copyright © 1980, National Fire Protection Assoc., MA 02269.
This reprinted material is not the complete and official position of the NFPA on the referenced subject, which is represented only by the standard in its entirety.

pneumonitis. May cause gastrointestinal disturbances. Symptoms may include irritation, nausea, vomiting and diarrhea. May cause harmful central nervous system effects. Effects may include excitation, euphoria, headache, dizziness, drowsiness, blurred vision, fatigue, tremors, convulsions, loss of consciousness, coma, respiratory arrest and death.

SKIN:

PRACTICALLY NON-TOXIC. Rabbit dermal LD50 = >5 ml/kg. SLIGHTLY IRRITATING. Repeated or prolonged contact may result in defatting, redness, itching, inflammation, cracking and possible secondary infection. High pressure skin injections are SERIOUS MEDICAL EMERGENCIES Injury may not appear serious at first; within a few hours, tissue will become swollen, discolored and extremely painful (see Notes to Physician section).

EYE:

May cause slight transient irritation.

INHALATION:

May cause respiratory tract irritation. Exposure may cause central nervous system symptoms similar to those listed under "Ingestion" (see Ingestion section). May also cause anemia and irregular heart rhythm. Repeated or prolonged exposures may cause behavioral changes.

SPECIAL TOXIC EFFECTS:

A product of similar composition has been found to be carcinogenic to laboratory animals when given by inhalation Also, a variety of mutagenicity assays have been conducted that have yielded conflicting results.

NOTE: This product has not been tested as a whole for all potential health effects. It may have other health hazards related to its components. See "Ingredient/Health Hazards" for additional information.

FIRST AID

INGESTION:

DO NOT INDUCE VOMITING BECAUSE OF DANGER OF ASPIRATING LIQUID INTO LUNGS Get immediate medical attention. If spontaneous vomiting occurs, monitor for breathing difficulty.

SKIN CONTACT:

Remove contaminated clothing immediately. Wash area of contact thoroughly with soap and water. Get medical attention if irritation persists. High pressure skin injections are SERIOUS MEDICAL EMERGENCIES. Get immediate medical attention.

EYE CONTACT:

Flush immediately with large amounts of water. Eyelids should be held away from the eyeball to ensure thorough rinsing. Get medical attention if irritation persists.

INHALATION:

Remove affected person from source of exposure. If not breathing, institute cardiopulmonary resuscitation (CPR). If breathing is difficult, ensure clear airway and give oxygen. Get medical attention.

NOTES TO PHYSICIAN

In case of ingestion, gastric lavage with activated charcoal can be used promptly to prevent absorption. Consideration should be given to the use of an intratracheal tube, to prevent aspiration. Individuals intoxicated by gasoline should be hospitalized

immediately, with acute and continuing attention to neurologic and cardiopulmonary function. Positive pressure ventilation may be necessary. After the initial episode, individuals should be followed for changes in blood variables and the delayed appearance of pulmonary edema and chemical pneumonitis Such patients should be followed for several days or weeks for delayed effects, including bone marrow toxicity, hepatic and renal impairment Individuals with chronic pulmonary disease will be more seriously impaired, and recovery from inhalation exposure may be complicated. In case of skin injection, prompt debridement of the wound is necessary to minimize necrosis and tissue loss.

PERSONAL PROTECTION INFORMATION

SKIN PROTECTION:
Wear impervious gloves and protective clothing to prevent skin contact.

RESPIRATORY PROTECTION:
Use NIOSH or MSHA approved equipment when airborne exposure limits are exceeded. NIOSH/MSHA approved breathing equipment must be available for non-routine and emergency use. Ventilation may be used to control or reduce airborne concentrations.

PHYSICAL PROPERTIES

BOILING POINT: 20.0 - 170.0 C (68 - 338 F)
SPECIFIC GRAVITY: 0.70 @ 20 C (68 F)
MELTING POINT: NA
% VOLATILE: 100.0
VAPOR PRESSURE: 5.50 - 7.00 PSI
EVAPORATION RATE (WATER=1): ND
VAPOR DENSITY (AIR=1): > 1.0
VISCOSITY: ND
% SOLUBILITY IN WATER: NEGLIGIBLE
POUR POINT: ND
pH: ND
APPEARANCE/ODOR: CLEAR LIQUID WITH A STRONG HYDROCARBON ODOR.

FIRE AND EXPLOSION DATA

FLASH POINT: -40.00 C -40 F
AUTOIGNITION TEMPERATURE: 440.00 C (833 F)
FLAMMABILITY LIMITS IN AIR (% BY VOL.) LOWER: 1.4 UPPER: 7.6

BASIC FIREFIGHTING PROCEDURES:
Use dry chemical, foam or carbon dioxide to extinguish fire. Water may be ineffective but should be used to cool fire-exposed containers, structures and to protect personnel. If leak or spill has not ignited, ventilate area and use water spray to disperse gas or vapor and to protect personnel attempting to stop a leak. Use water to flush spills away from sources of ignition. Do not flush down public sewers.

UNUSUAL FIRE AND EXPLOSION HAZARDS:
Dangerous when exposed to heat or flame. Vapors form flammable or explosive mixtures with air at room temperature. Vapor or gas may spread to distant ignition sources and flash back. Vapors may concentrate in confined areas. Runoff to sewer may cause fire or explosion hazard. Containers may explode in heat of fire. Irritating or toxic substances may be emitted upon thermal decomposition. Exposed firefighters should wear MSHA/NIOSH

approved self-contained breathing apparatus with full face mask and full protective equipment.

REACTIVITY DATA

STABILITY/INCOMPATIBILTY:
Stable under normal conditions of use. Avoid contact with strong oxidizers.

HAZARDOUS REACTIONS/DECOMPOSITION PRODUCTS:
Combustion may produce CO, CO2 and reactive hydrocarbons

ENVIRONMENTAL INFORMATION

SPILL OR RELEASE TO THE ENVIRONMENT:
If your facility or operation has an "Oil or Hazardous Substance Contingency Plan", activate its procedures.

-- Take immediate steps to stop and contain the spill. Caution should be exercised regarding personnel safety and exposure to the spilled material.

-- For technical advise and assistance related to chemicals, contact CHEMTREC (800/424-9300) and your local fire department

-- Notify the National Response Center, if required.

Emergency Action:
Keep unnecessary people away. Stay upwind; keep out of low areas. Isolate hazard area and deny entry. (Also see Personal Protection Information section.) Isolate for 1/2 mile in all directions if tank or tankcar is involved in fire.

Spill or Leak Procedure:
No flares, smoking or flames in hazard area. Stop leak if you can do it without risk. Use water spray to reduce vapors. Small Spills: Take up with sand or other noncombustible absorbent material or other sorbent known to be compatible, then flush area with water. Large Spills: Dike far ahead of spill for later disposal.

Notification:
Any spill or release, or substantial threat of release, of this material to navigable water (virtually any surface water) sufficient to cause a visible sheen upon the water must be reported immediately to the National Response Center (800/424-8802), as required by U.S. Federal Law. Failure to report may result in substantial civil and criminal penalties

WASTE DISPOSAL:
This substance, when discarded or disposed of, is not specifically listed as a hazardous waste in Federal regulations; however it could be hazardous if it is considered toxic, corrosive, ignitable, or reactive according to Federal definitions (40 CFR 261). Additionally, it could be designated as hazardous according to state regulations. This substance could also become a hazardous waste if it is mixed with or comes in contact with a hazardous waste. If such contact or mixing may have occurred, check 40 CFR 261 to determine whether it is a hazardous waste. If it is a hazardous waste, regulations at 40 CFR 262, 263, and 264 apply.

The transportation, storage, treatment, and disposal of this waste material must be conducted in compliance with all applicable Federal, state, and local regulations.

SARA TITLE III INFORMATION:

Listed below are the hazard categories for the Superfund Amendments and Reauthorization Act (SARA) Section 311/312 (40 CFR 370):

Immediate Hazard: X Delayed Hazard: X Fire Hazard: X Pressure Hazard: __ Reactivity Hazard: __

ADDITIONAL ENVIRONMENTAL REGULATORY INFORMATION:

This substance is listed as a toxic pollutant pursuant to 40 CFR 122.21, Appendix D, Table II/III. Any unusual introduction of this substance into the facility's process streams, stormwater and/or wastewater could result in the violation of U.S Federal Law. Facilities must notify the USEPA as soon as they know, or have reason to believe, that any activity has occurred, or will occur, which would result in the discharge of a toxic pollutant which is not regulated in the facility's NPDES permit. Notification levels are described in 40 CFR 122.42(a)(1) and 122.42(a)(2). Refer to spill section for additional regulations. There may be specific regulations at the local, regional or state level that pertain to this material.

SPECIAL PRECAUTIONS/SUPPLEMENTAL INFORMATION

HANDLING/STORAGE:

Store in tightly closed containers in cool, dry, isolated, well-ventilated area away from heat, sources of ignition and incompatibles. Ground lines and equipment used during transfer to reduce the possibility of static spark-initiated fire or explosion.

Empty containers may contain toxic, flammable/combustible or explosive residue or vapors Do not cut, grind, drill, weld or reuse containers unless adequate precautions are taken against these hazards

TRANSPORTATION REQUIREMENTS

D.O.T. HAZARD CLASS (49 CFR 172.101): FLAMMABLE LIQUID

D.O.T. PROPER SHIPPING NAME (49 CFR 172.101): GASOLINE, FLAMMABLE LIQUID UN 1203

D.O.T. LABELS REQUIRED (49 CFR 172.101): FLAMMABLE LIQUID

D.O.T. PLACARDS REQUIRED: FLAMMABLE

BILL OF LADING DESCRIPTION: GASOLINE, FLAMMABLE LIQUID, UN 1203

UN/NA CODE: UN 1203

INGREDIENTS/HEALTH HAZARD INFORMATION

COMPONENT	CAS NO.	%	EXPOSURE LIMITS - REFERENCE
Gasoline	NONE	90-95	300 ppm TWA; 500 ppm STEL (ACGIH)

Health Hazards: Gasoline has been shown to cause an increased rate of kidney tumors in laboratory animals.

Benzene	71-43-2	0-5	1 ppm 8-hour TWA; 5 ppm STEL (OSHA) 1 ppm 60-minute CEIL (NIOSH) 10 ppm (30 mg/M3) TLV (ACGIH 1987-88)

Health Hazards: Harmful or fatal if swallowed, inhaled or absorbed through the skin Dog oral LDLo = 2,000 mg/kg. Rat LC50 = 10,000 ppm/7 hours Aspiration hazard. Moderately irritating to the skin. May cause allergic reactions in

some individuals. Severely irritating to the eye. Acute benzene poisoning causes central nervous system depression. Benzene is carcinogenic to laboratory animals when given by intubation or by inhalation. Chronic exposure affects the hematopoietic system causing blood disorders including anemia and pancytopenia. There is an association between occupational exposure to benzene and human leukemia. This association is based on limited information and is currently unresolved. Mutagenic and clastogenic in mammalian and non-mammalian test systems. Reproductive toxicant only at doses that are maternally toxic, based on tests with animals. Carcinogenic determinations: IARC--Human positive and animal suspected carcinogen; NTP--Known carcinogen; ACGIH--Suspected carcinogen.

Remaining components not determined hazardous and/or hazardous components present at less than 1.0% (0.1% for carcinogens).	NA	Trace	NA

CASE STATUS OF INCIDENT

Open :		Closed :	X	Report Author :	JOHN PORTER #914 INSPECTOR - ERC
Signature of Case Emergency Response Coordinator :					

INSPECTOR'S REPORT:

On the date and time reported, this Inspector was assigned to respond to this location for a reported jet fuel spill from a delivery vehicle. It appears that the drive shaft punctured the tank causing a release of aprox. 10-15 galls to the ground. United Oil Recovery was contracted for the removal.

Truck vin # 1FDJF37Y7GKB64047

CONNECTICUT DEPARTMENT OF ENVIRONMENTAL PROTECTION
79 ELM STREET
HARTFORD, CT 06106

BUREAU OF WASTE MANAGEMENT
OIL AND CHEMICAL SPILL RESPONSE DIVISION

25 July 1998

To: Ben Yorke #921, Western Region Supervisor

From: John Porter #914, ERC – State Inspector

Subject: 98-04815 @ 10:30

While investigating a AV Gas spill at the mid field aircraft parking ramp this Inspector observed a Million Air fuel truck pull up behind the other fuel truck that had the spill. I instructed to the Driver of the second fuel truck (Tom Rippchen) to move the truck because he was now parked in the fuel spill. Mr. Rippchen stated that "he did not like this Inspectors attitude and that I could be nicer". He moved the vehicle and continued to start fueling an adjoining aircraft.

At 10:40 hours, Mr. Rippchen returned and asked if my name was John Porter, He stated that he would be calling my supervisor regarding my attitude. Captain Bill Parker of the airport fire department tried explaining to Mr. Rippchen that it was not a good idea to have driven through and parked on top of the spilled fuel. Mr. Rippchen stated that this was only his part time job and that he worked for the Hartford Courant. He also stated again that he would be contacting my supervisor.

At 10:52 hours, Mr. Rippchen returned for a third time, handed be a business card from the Hartford Courant and stated that he would be contacting my supervisor Monday A.M. He also stated that he would be asking for a copy of my report for this incident.

Due to the nature of the product being of a flammable mixture, the driver Mr. Rippchen did not exercise good judgment by driving through and parking on top of this product with an internal combustion engine, and put himself and an additional fueler in possible danger.

EXXON COMPANY, U.S.A. P.O. BOX 2180 HOUSTON, TX 77252-2180

A. IDENTIFICATION AND EMERGENCY INFORMATION

PRODUCT NAME
AVIATION GASOLINE 100 LL

PRODUCT CODE
113000 - 00039

PRODUCT CATEGORY
Aviation Gasoline

PRODUCT APPEARANCE AND ODOR
Clear blue liquid
Gasoline hydrocarbon odor

MEDICAL EMERGENCY TELEPHONE NUMBER
(713) 656-3424

B. COMPONENTS AND HAZARD INFORMATION

COMPONENTS	CAS NO. OF COMPONENTS	APPROXIMATE CONCENTRATION
Product is a variable complex mixture of components, principally hydrocarbons, blended to performance, rather than chemical specifications and typically contains the following:		
Naphtha (petroleum), light alkylation	64741-66-8	Greater than 65%
Isopentane	78-78-4	Up to 15%
Toluene	108-88-3	Up to 20%
Organic lead additives	Proprietary	Up to 0.07%
It may include: Benzene	71-43-2	0-0.1%

All components of this product are listed on the U.S. TSCA inventory.

See Section E for Health and Hazard Information.

See Section H for additional Environmental Information.

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM (HMIS)

Health	Flammability	Reactivity	BASIS
1	3	0	Recommended by Exxon

EXPOSURE LIMIT FOR TOTAL PRODUCT	BASIS
100 ppm (300 mg/m3) for an 8-hour workday	Recommended by Exxon. OSHA Regulation 29 CFR 1910.1000 and the American Conference of Governmental Industrial Hygienists (ACGIH) list Threshold Limit Values (TLV) of 300 ppm (900 mg/m3) for gasoline for an 8-hour workday; 500 ppm (1500 mg/m3) STEL.
50 ppm (187 mg/m3) for toluene (skin) for an 8-hour workday	Recommended by the American Conference of Governmental Industrial Hygienists (ACGIH)
The airborne benzene level shall not exceed 1 ppm for an 8-hour workday; 5 ppm STEL	OSHA Regulation 29 CFR 1910.1028

Bureau of Waste Management
Oil and Chemical Spill Response Division

REPORT OF PETROLEUM OR CHEMICAL PRODUCT DISCHARGE, SPILLAGE OR RELEASE

1. When did the incident occur? date 7/25/98 time 07:45
   month/ day /year

2. Where did the incident occur? BRAINARD AIRPORT, HARTFORD, CT.

3. How did the incident occur? (Describe the cause) REAR YOKE OF VEHICLE DRIVESHAFT BROKE CAUSING THE DRIVE-SHAFT TO PUNCTURE A HOLE IN THE FUEL TANK.

4. Under whose control was the chemical or petroleum product at the time of the incident?

   Name: BRAINARD AIRPORT SERVICES, INC.

   Mailing address and street: 20 LINDBERGH DRIVE

   Town: HARTFORD State: CT Zip 06114 Telephone 8605489334

5. Who is the owner of the property onto which the spill occurred?

   STATE OF CONNECTICUT

   If this is a corporate property or property owned jointly who represents the owner?

   Corporate property o Property owned jointly o

   Name: _____

   Mailing address and street: _____

   Town: _____ State: _____ Zip _____ Telephone _____

6. When was the incident verbally reported to the Department of Environmental Protection?

Date 07 / 25 / 98 time 08 : 00
month / day / year

7. Who reported the incident and who were they representing?

Name: BILL PARKER

Mailing address and street: 251 MAXIM RD

Town: HARTFORD State: CT Zip 06114 Telephone 860 566 7037

8. What were the chemicals or petroleum products released, spilled or discharged? Give an exact description of each of the materials involved in the incident, including chemical names, percent concentrations, trade names, etc. If the chemicals are Extremely Hazardous substances or CERCLA hazardous substances they must be identified as such and include the reportable quantity (RQ). Please attach a Material Safety Data Sheet (MSDS) for each chemical involved.

100LL AVIATION GASOLINE

9. What were the quantities of chemicals that were releases, spilled or discharged to each environmental medium (air, surface water, soil, groundwater)? [NOTE: Connecticut General Statutes requires the reporting of any amount of any substance or material released to the environment].

APPROX. 10 - 15 GALLONS

10. Did any of the chemical travel beyond the property line? [NOTE: materials that enter the ground water are considered to have gone beyond the property line.]

No.

11. What actions were taken to respond to and contain the release, spill or discharge?

ABSORBENT PADS AND SPEEDI-DRY MATERIAL WERE APPLIED IMMEDIATELY TO THE AFFECTED AREA

12. What actions are being taken to prevent reoccurrence of an incident of this type?

INSPECTION OF DRIVESHAFT ON A REGULAR BASIS.

Attach additional sheets if necessary.

13. Were there any injuries as a result of the incident? If so, list the names of exposed individuals, their addresses, phone numbers and describe their injuries.

Name: N/A

Mailing address and street: _____

Town: _____ State: _____ Zip _____ Telephone_____

Attach additional sheets if necessary.

14. What is the appropriate advice regarding medical attention necessary for exposured individuals?

NONE REQUIRED

15. Are there any known or anticipated health risks, acute or chronic, associated with the release of this chemical or medical advice that should be communicated?

NONE.

16. Was the incident completely cleanup by the time this report was submitted? If not, what are the anticipated remedial actions and their duration? _____

YES.

17. **CERTIFICATION.** I hereby affirm that the foregoing statement is true to the best of my knowledge.

B. COMPONENTS AND HAZARD INFORMATION

COMPONENTS	CAS NO. OF COMPONENTS	APPROXIMATE CONCENTRATION

Product is a variable complex mixture of components, principally hydrocarbons, blended to performance, rather than chemical, specifications.

See Section E for Health and Hazard Information.

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM (HMIS)

Health	Flammability	Reactivity	BASIS
1	3	0	Recommended by Exxon

EXPOSURE LIMIT FOR TOTAL PRODUCT	BASIS
100 ppm (300 mg/m3) for an 8-hour workday.	Recommended by Exxon. The American Conference of Governmental Industrial Hygienists (ACGIH) lists Threshold Limit Value (TLV) of 300 ppm (900 mg/m3) for an 8-hour workday; 500 ppm STEL.
The airborne benzene level shall not exceed 1 ppm for an 8-hour workday or 5 ppm for any 15 minute period.	OSHA standard for benzene.

C. PRIMARY ROUTES OF ENTRY AND EMERGENCY AND FIRST AID PROCEDURES

EYE CONTACT
If splashed into the eyes, flush with clear water for 15 minutes or until irritation subsides. If irritation persists, call a physician.

SKIN
In case of skin contact, remove any contaminated clothing and wash skin thoroughly with soap and water.

INHALATION
If overcome by vapor, remove from exposure and call a physician immediately. If breathing is irregular or has stopped, start resuscitation, administer oxygen, if available.

INGESTION
If ingested, DO NOT induce vomiting; call a physician immediately.

D. FIRE AND EXPLOSION HAZARD INFORMATION

UNUSUAL FIRE AND EXPLOSION HAZARD

EXTREMELY FLAMMABLE VAPORS CAN TRAVEL AND EXPLODE

FLASH POINT (MINIMUM) **AUTOIGNITION TEMPERATURE**
EXTREMELY FLAMMABLE - Per DOT 49 CFR 173.115
Approximately -45°C (-50°F) Approximately 439°C (824°F)
ASTM D 56, Tag Closed Cup
National Fire Protection Association Guide on Fire Protection for Hazardous Materials

NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) - HAZARD IDENTIFICATION

Health	Flammability	Reactivity	BASIS
1	3	0	Recommended by the National Fire Protection Association

HANDLING PRECAUTIONS
Keep product away from heat, sparks, pilot lights, static electricity, and open flame.

FLAMMABLE OR EXPLOSIVE LIMITS (APPROXIMATE PERCENT BY VOLUME IN AIR)
Estimated values: Lower Flammable Limit 1.4% Upper Flammable Limit 7.6%

EXTINGUISHING MEDIA AND FIRE FIGHTING PROCEDURES
Foam, water spray (fog), dry chemical, carbon dioxide and vaporizing liquid type extinguishing agents may all be suitable for extinguishing fires involving this type of product, depending on size or potential size of fire and circumstances related to the situation. Plan fire protection and response strategy through consultation with local fire protection authorities or appropriate specialists.

The following procedures for this type of product are based on the recommendations in the National Fire Protection Association's "Fire Protection Guide on Hazardous Materials", Eighth Edition (1984):

Use dry chemical, foam or carbon dioxide. Water may be ineffective, but water should be used to keep fire-exposed containers cool. If a leak or spill has ignited, use water spray to disperse the vapors and to protect men attempting to stop a leak. Water spray may be used to flush spills away from exposures. Minimize breathing gases, vapor, fumes or decomposition products. Use supplied-air breathing equipment for enclosed or confined spaces or as otherwise needed.

NOTE: The inclusion of the phrase "water may be ineffective" is to indicate that although water can be used to cool and protect exposed material, water may not extinguish the fire unless used under favorable conditions by experienced fire fighters trained in fighting all types of flammable liquid fires.

DECOMPOSITION PRODUCTS UNDER FIRE CONDITIONS
Fumes, smoke, carbon monoxide, aldehydes and other decomposition products, in the case of incomplete combustion.

"EMPTY" CONTAINER WARNING
"Empty" containers retain residue (liquid and/or vapor) and can be dangerous. DO NOT PRESSURIZE, CUT, WELD, BRAZE, SOLDER, DRILL, GRIND OR EXPOSE SUCH CONTAINERS TO HEAT, FLAME, SPARKS, STATIC ELECTRICITY, OR OTHER SOURCES OF IGNITION; THEY MAY EXPLODE AND CAUSE INJURY OR DEATH. Do not attempt to clean since residue is difficult to remove. "Empty" drums should be completely drained, properly bunged and promptly returned to a drum reconditioner. All other containers should be disposed of in an environmentally safe manner and in accordance with governmental regulations. For work on tanks refer to Occupational Safety and Health Administration regulations, ANSI Z49.1, and other governmental and industrial references pertaining to cleaning, repairing, welding, or other contemplated operations.

E. HEALTH AND HAZARD INFORMATION

VARIABILITY AMONG INDIVIDUALS

Health studies have shown that many petroleum hydrocarbons and synthetic lubricants pose potential human health risks which may vary from person to person. As a precaution, exposure to liquids, vapors, mists or fumes should be minimized.

EFFECTS OF OVEREXPOSURE (Signs and symptoms of exposure)

High vapor concentrations (greater than approximately 1000 ppm) are irritating to the eyes and the respiratory tract, may cause headaches and dizziness, are anesthetic, may cause unconsciousness, and may have other central nervous system effects including death.

Prolonged or repeated liquid contact with the skin will dry and defat the skin, leading to possible irritation and dermatitis.

NATURE OF HAZARD AND TOXICITY INFORMATION

Prolonged or repeated skin contact with this product tends to remove skin oils possibly leading to irritation and dermatitis; however, based on human experience and available toxicological data, this product is judged to be neither a "corrosive" nor an "irritant" by OSHA criteria.

Product contacting the eyes may cause eye irritation.

This product may contain up to a maximum of 4.9 weight percent benzene, CAS No. 71-43-2, as a natural constituent of various gasoline blend components. Benzene can cause anemia and other blood diseases, including leukemia (cancer of the blood-forming system), after prolonged or repeated exposures at high concentrations (e.g., 50-500 ppm). It has also caused fetal defects in tests on laboratory animals.

Contains light hydrocarbon components. Lifetime studies by the American Petroleum Institute have shown that kidney damage and kidney cancer can occur in male rats after prolonged inhalation exposures at elevated concentrations of total gasoline. Kidneys of mice and female rats were unaffected. The implication of these data for humans has not been determined, particularly since most human exposures are to light components, not to total gasoline. Certain components, such as normal hexane, may also affect the nervous system at high concentrations (e.g., 1000-1500 ppm). Typically, n-hexane represents 1 to 3% of gasoline. May contain a combined concentration of toluene, CAS No. 108-88-3, and xylene, CAS No. 1330-20-7, ranging from approximately 5 to 50%.

Contains organic lead alkyl additives.

Product has a low order of acute oral and dermal toxicity, but minute amounts aspirated into the lungs during ingestion or vomiting may cause mild to severe pulmonary injury and possibly death.

This product is judged to have an acute oral LD50 (rat) greater than 5 g/kg of body weight, and an acute dermal LD50 (rabbit) greater than 3.16 g/kg of body weight.

PRE-EXISTING MEDICAL CONDITIONS WHICH MAY BE AGGRAVATED BY EXPOSURE

Benzene - Individuals with liver disease may be more susceptible to toxic effects.

Petroleum Solvents/Petroleum Hydrocarbons - Skin contact may aggravate an existing dermatitis.

Lead - To avoid further damage, those with kidney, neurological or blood disease should avoid exposure. Exposure during pregnancy should be avoided. Exposure may aggravate or precipitate an attack of gout.

Hexane - Individuals with neurological disease should avoid exposure.

F. PHYSICAL DATA

The following data are approximate or typical values and should not be used for precise design purposes.

BOILING RANGE
Approximately 70°C (158°F) IBP to 170°C (338°F) FBP

SPECIFIC GRAVITY (15.6 C/15.6 C)
Approximately 0.71

MOLECULAR WEIGHT
Complex mixture; components vary from approximately 86-170

pH
Essentially neutral

POUR, CONGEALING OR MELTING POINT
-58°C (-72°F) Maximum Freeze Point by ASTM D 2386

VISCOSITY
Approximately 0.6 cSt @ 25°C

VAPOR PRESSURE
5.5 to 7.0 psi (Reid Vapor Pressure)

VAPOR DENSITY (AIR = 1)
Approximately 4

PERCENT VOLATILE BY VOLUME
100

EVAPORATION RATE @ 1 ATM. AND 25 C (77 F) (n-BUTYL ACETATE = 1)
Approximately 10-11

SOLUBILITY IN WATER @ 1 ATM. AND 25 C (77 F)
Negligible; less than 0.1%

G. REACTIVITY

This product is stable and will not react violently with water. Hazardous polymerization will not occur. Avoid contact with strong oxidants such as liquid chlorine, concentrated oxygen, sodium hypochlorite or calcium hypochlorite.

H. ENVIRONMENTAL INFORMATION

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED
Shut off and eliminate all ignition sources. Keep people away. Recover free product. Add sand, earth or other suitable absorbent to spill area. Minimize breathing vapors. Minimize skin contact. Ventilate confined spaces. Open all windows and doors. Keep product out of sewers and watercourses by diking or impounding. Advise authorities if product has entered or may enter sewers, watercourses, or extensive land areas.
Assure conformity with applicable governmental regulations. Continue to observe precautions for volatile, flammable vapors from absorbed material.

REPORTABLE QUANTITY (RQ), EPA REGULATION 40 CFR 302
The RQ for benzene is 1,000 pounds. This product may contain approximately 4.9% benzene.

THRESHOLD PLANNING QUANTITY (TPQ), EPA REGULATION 40 CFR 355
Not applicable

TOXIC CHEMICAL RELEASE REPORTING, EPA REGULATION 40 CFR 372
This product may contain approximately 4.9% benzene.

EPA HAZARD CLASSIFICATION CODE:	Acute Hazard	Chronic Hazard	Fire Hazard	Pressure Hazard	Reactive Hazard	Not Applicable
	XXX	XXX	XXX			

I. PROTECTION AND PRECAUTIONS

VENTILATION
Use only with ventilation sufficient to prevent exceeding recommended exposure limit or buildup of explosive concentrations of vapor in air. Use explosion-proof equipment. No smoking or open lights.

RESPIRATORY PROTECTION
Use supplied-air respiratory protection in confined or enclosed spaces, if needed.

FIELD REPORT NARRATIVE:

Not to scale north

This inspector along with ERC II 935 investigated a report of an oil sheen on the Connecticut River in the area of Covanta Mid Conn Inc. The sheen was reported by Mary Oneil the Environmental Engineer at Covanta.

This inspector along with ERC II 935 went upstream from Covanta and checked for any discharges. There was no evidence of any discharges upstream or any sheen traveling down river towards Covanta.

This inspector met with Mary Oneil at the facility and walked out to a vantage point over the Connecticut River, there was some evidence of a sheen along the edge of the river near the intake coffer dam.

At this time this case will be considered unfounded and closed with the Emergency Response Unit of the CT DEP.

Re: Fuel Oil Spill
Central Auto Transport Inc.
Maxim Rd. Hartford Ct.

Dear Mark:

I recently spoke with Mike Capuano of your office regarding the status of the above spill, He suggested that I send my file to you for review. Briefly here's what happened, I was contracted by Tanks-R-us of Manchester Ct. to assist them with field screening and sampling of a Number 2 Fuel Oil Spill at the above location. I repeatly told the property owner and Bill Otto from Tanks-R-us to contact your office and to make notification of the spill , Mr. Otto did unsucessfully try to get the owner Terry Hewitt of Priority Fuel Inc. to also report the spill, none of the parties involved contacted your office. I have been dealing with Red Harris of Ambrose Enviromental the Insurance Carriers representive for Priority Fuel on this matter and we both agreeded that we contact DEP and resovle this matter.

I am enclousing my original letter to Tanks-R-us, copies of the analyical and the delivery ticket. As you will see from the analytical, there are other Hydrocarbons that have not been identified and really cannot be attributed to this release and are more than likely historical to this property, as it has been and will continue to be used as a Auto Repair facility and Junk Yard.

Please contact me ASAP at (860)236-8817 or Pager # (860)293-4689 to dicuss further action on this matter, Red Harris is anxious to resolve this in a timely manner and to close his file.

Regards,

Kyle F. Zimmer Jr.
Logical Enviormental Solutions

Mr. Bill Otto June 5,1998

Manchester Ct.

Re:Fuel Oil Spill
Central Auto Transport Inc.
Maxim Rd. Hartford Ct.

Dear Bill:

The following is a brief description of the activities of Logical Environmental Solutions preformed on your behalf on May 29 & 30 1997, at the above location.

L.E.S. was contacted by Ed Otto of Tanks-R-Us on the morning of the 29th and informed myself of a spill that occured several days pior at Central Auto Transport. A delivery of Diesel Fuel was dropped into a 2,500gal fuel truck that is located at Central's yard.

It appears that the Driver was not paying attention and placed approx. 2,600+gals in the tank. The fuel ran from the manway on top of the truck inside the catwalk to a straight pipe (drain) and terminated on the Process Gravel Loading Dock where the Truck was located.

I arrived on-site at 1:00pm on the 29th and met with Ed, he informed me that you had been contracted to remove the impacted soil and dispose of same. Ed also requested my assistance with the project, specifically field screening with our PID and the taking of confirmatory samples.

I Inquired as to weather or not Central or the delivery company had contacted the St/Ct/ DEP Oil and Chemical Spill Division, He stated that he did not know if they had been contacted or not, I then informed Ed of the proper procedures required when reporting, that either the Oil Company or the Property Owner should contact the DEP as of this writing I am not sure if this has occured or not. Please Investigate this and let me know as soon as you can.

Excavation then occured and one load of soil was transported to Phoenix Soil in Waterbury Ct. for traetment. A final status of soil tonage, Lab analysis and closure report will follow when the Lab reports are completed, I expect them the early part of next week.

I was also contacted by Red Harris of Ambrose Enviormental he represents the Insurance carrier of the Oil Company he will be working with me to resolve billing, future work ect. on this project. Red also committed to keeping us upto date with developing activities.

Attached please find the invoice to date on this project,althought I do not expect any future billing on this project from our stand point, one never knows, I will keep you informed if I expect to spend considerable time in my dealings with everyone involved.

Regards ,

Kyle F. Zimmer Jr.

16. GENERATOR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; or, if I am a small quantity, I have made good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

16. **GENERATOR'S CERTIFICATION:** I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations, and all applicable State laws and regulations.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; **OR**, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

Report Author:	Robert Shuler ERC I 929		Date:	7/2/2012
Signature of Case Emergency Response Coordinator:				

FIELD REPORT NARRATIVE:

The Connecticut Department of Energy & Environmental Protection Emergency Response Unit (CT DEEP ERU) was requested to respond to assist the Connecticut Department of Transportation Bureau of Aviation (CT DOT BA) with a release of hydraulic oil from a lawn mower. SERC Chandler #937 dispatched ERC Shuler #929.

Observations

Upon arrival, 929 met with Mr. Kurt Sendlein, Airport Operations Coordinator for the CT DOT BA. 929 of the CT DEEP ERU observed an insignificant amount of hydraulic oil impacting the ground soil on the flood dyke. The CT DOT BA had equipment on sight that could remove impacted soils.

Corrective Actions

929 issued a "Responsibility Sheet" and a 22a-454 Permitted Contractor's List to Mr. Sendlein. 929 allowed members on scene for the CT DOT BA to use their equipment to remove the soils that were impacted. The CT DOT BA was allowed to store the collection of soil on a dump truck. The dump truck was stored inside a warehouse until the next business. The CT DOT Environmental Compliance Division hired Moran Environmental Recovery to dispose of the soil properly.This case is closed with the CT DEEP ERU.

Denise,

See attached copy of the Phoenix Soils, LLC Manifest for soils disposal associated with the soils located at the Brainard Airport Facility. All soils associated with the hydraulic oil spill have been removed from the site, and were disposed of under the attached.

Please feel free to contact me if you have any questions.

Thanks

ewide Underground Storage Tank Program
W Project #: BI-2B-760-B335 (A334)
Army National Guard OMS-7A, Brainard Field, Hartford

n,

ed please find the report of activities at the subject site, prepared by Fuss & O'Neill, Inc. We have ewed this report and concur with its recommendations.

Final contamination levels for the fuel point tanks (5K gal. gasoline / 3K gal. diesel) were found to be below prescribed action levels. Therefore, we are considering this closure of these tanks.

The heating fuel tank's grave results were all below prescribed action levels. However, one pipe trench sample field screened with PetroFLAG below action level, but the laboratory 418.1 was 1280 mg/kg. We do not intend to pursue further investigation of this site, although it not in complete compliance with the RSR's. We are basing our decision on the facts that: this sample field screened below action level, there was no visible indication of contamination in the excavation, the potential extent of the contamination is extremely limited, the entire vicinity is covered with bituminous paving, and the armory is in an industrial/commercial area and in a GB zone. Please let me know if you disagree with this approach.

The submission of this report is intended to fulfill our obligation for release reporting in accordance w RCSA 22a-449(d)-105 and corrective action in accordance with RCSA 22a-449(d)-106.

If you have any questions, or wish to discuss this matter further, feel free to contact me at (860) 71 5705.

Sincerely,

Joseph V. Cassidy, P.E.

RE: Statewide Underground Storage Tank Program
DPW Project No. BI-2B-760-B335
Brainard OMS-7A (Site A334)
Hartford, Connecticut
Tank Removal Report
Gasoline, Diesel, and Heating-Oil USTs

Dear Mr. Cassidy:

Enclosed please find a summary of our findings and recommendations associated with the removal of one 2,000-gallon gasoline UST, one 3,000-gallon diesel UST, and 5,000-gallon heating-oil UST at the above-referenced site. The tank report and associated analytical data for each tank grave are enclosed. The tanks were removed by Kessler Installation Corporation on September 14 and 16, 1998, as part of the Connecticut DPW Statewide Underground Storage Tank Program.

Please note that Fuss & O'Neill, Inc., has been unable to obtain the soil and tank disposal documentation from the contractor. DPW should follow-up on this disposal documentation to assure that proper disposal procedures are being followed.

Should you have any questions or comments, please do not hesitate to call.

Sincerely,

Allyn Foss
Project Hydrogeologist

Andrew R. Zlotnick, LEP
Senior Hydrogeologist

CONN DPW PROJECT NO. BI-2B-760-B335
TANK REMOVAL REPORT

SITE NAME: BRAINARD OMS-7A - HANGAR **TANK: 2,000-GALLON GASOLINE UST**

CONCLUSIONS (check all that apply)

TANK ID # 2,000 Gallon Gasoline UST

Soil

__X__ Initial soil sample results indicate all contaminant concentrations are below action levels.

_____ Initial soil sample results or field screening results indicate contamination above action levels, but additional soil was removed and final soil samples indicate all contaminant concentrations are below action levels.

_____ Soil contamination persists above action levels because of the following:

- _____ Physical limitations (i.e. utilities, structures, etc.; see sketch).
- _____ Soil contamination extends into the saturated zone.
- _____ Contamination is extensive and other remedial options will be evaluated.

Disposition of Excavated Soil

__X__ Polluted soil was re-used on the parcel in substantial accordance with RSCA §22a-133k(2)(h).

_____ Polluted soil was disposed of off-site as contaminated.

_____ Contaminated soil was disposed of off-site.

Tank-grave Water

__X__ Tank-grave water not evaluated.

_____ Tank-grave water analysis indicates contaminant concentrations below action levels.

_____ Tank-grave water analysis indicates contaminant concentrations in excess of action levels.

RECOMMENDATIONS

__X__ No further investigation or remediation.

_____ Site does not comply with RSRs; however, immediate action is not recommended. Site should be placed on the DPW list of low-priority sites for future consideration.

_____ Site does not comply with RSRs:

- _____ Determine potential receptors.
- _____ Perform investigation in accordance with the DPW UST Program Scope of Work for Soil and Groundwater Remedial Investigations dated March 14, 1994.
- _____ Initiate an emergency response program.

CONCLUSIONS (check all that apply)

TANK ID # 3,000-Gallon Diesel UST

Soil

__X__ Initial soil sample results indicate all contaminant concentrations are below action levels.
_____ Initial soil sample results or field screening results indicate contamination above action levels, but additional soil was removed and final soil samples indicate all contaminant concentrations are below action levels.
_____ Soil contamination persists above action levels because of the following: See Comments.
- _____ Physical limitations (i.e. utilities, structures, etc., see sketch).
- _____ Soil contamination extends into the saturated zone.
- _____ Contamination is extensive and other remedial options will be evaluated.

Disposition of Excavated Soil

__X__ Polluted soil was re-used on the parcel in substantial accordance with RSCA §22a-133k(2)(h).
_____ Polluted soil was disposed of off-site as contaminated.
_____ Contaminated soil was disposed of off-site.

Tank-grave Water

__X__ Tank-grave water not evaluated.
_____ Tank-grave water analysis indicates contaminant concentrations below action levels.
_____ Tank-grave water analysis indicates contaminant concentrations in excess of action levels.

RECOMMENDATIONS

__X__ No further investigation or remediation.
_____ Site does not comply with RSRs; however, immediate action is not recommended. Site should be placed on the DPW list of low-priority sites for future consideration.
_____ Site does not comply with RSRs:
- _____ Determine potential receptors.
- _____ Perform investigation in accordance with the DPW UST Program Scope of Work for *Soil and Groundwater Remedial Investigations* dated March 14, 1994.
- _____ Initiate an emergency response program.

CONCLUSIONS (check all that apply)

TANK ID # 5,000-Gallon Heating-Oil UST

Soil

_____ Initial soil sample results indicate all contaminant concentrations are below action levels.
_____ Initial soil sample results or field screening results indicate contamination above action levels, but additional soil was removed and final soil samples indicate all contaminant concentrations are below action levels.
__X__ Soil contamination persists above action levels because of the following: See Comments.
- _____ Physical limitations (i.e. utilities, structures, etc., see sketch).
- _____ Soil contamination extends into the saturated zone.
- _____ Contamination is extensive and other remedial options will be evaluated.

Disposition of Excavated Soil

__X__ Polluted soil was re-used on the parcel in substantial accordance with RSCA §22a-133k(2)(h).
_____ Polluted soil was disposed of off-site as contaminated.
__X__ Contaminated soil was disposed of off-site.

Tank-grave Water

_____ Tank-grave water not evaluated.
__X__ Tank-grave water analysis indicates contaminant concentrations below action levels.
_____ Tank-grave water analysis indicates contaminant concentrations in excess of action levels.

RECOMMENDATIONS

_____ No further investigation or remediation.
__X__ Site does not comply with RSRs; however, immediate action is not recommended. Site should be placed on the DPW list of low-priority sites for future consideration.
_____ Site does not comply with RSRs:
- _____ Determine potential receptors.
- _____ Perform investigation in accordance with the DPW UST Program Scope of Work for Soil and Groundwater Remedial Investigations dated March 14, 1994.
- _____ Initiate an emergency response program.

Comments: Analytical results indicated TPH exceedance in pipe trench after excavation was backfilled.

1.0 INTRODUCTION

TRC Environmental (TRC) has prepared the following Phase I Environmental Site Assessment Report (Phase I ESA) for the Brainard General Aviation Airport property located at 233 Maxim Road / Lindbergh Drive, Hartford, Hartford County, Connecticut (hereinafter referred to as the "Site" or "Subject Property"). This Phase I ESA was conducted on behalf of the Connecticut Department of Transportation (ConnDOT), hereinafter referred to as the "Client" or "User", in conformance with the American Society for Testing and Materials (ASTM E 1527-05) guidelines entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and the Connecticut Department of Energy and Environmental Protection (CTDEEP) Site Characterization Guidance Document (SCGD) dated January 2011. Any exceptions to, or deletions from, this guidance are described in Sections 1.4 and 1.8 of this report. The following report is intended for sole use by ConnDOT and those granted permission to rely on the information contained herein through the issuance of a reliance letter as permitted by ConnDOT and issued by TRC.

1.1 Purpose of Study/Definition of Key Terms

The purpose of this assessment is to identify Recognized Environmental Conditions (RECs) as defined in ASTM E 1527-05 and Areas of Concern (AOCs), as defined in Connecticut's SCGD, in conjunction with the Site.

RECs are defined as conditions where the data or information collected indicates the presence or likely presence of any hazardous substances or petroleum products, on a property under conditions that indicate an existing release, a past release or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the soil, ground water, or surface water of the property. A material threat is defined as a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health and/or the environment. The term "REC" includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not "Recognized Environmental Conditions".

AOCs are defined in the SCGD as locations or areas at a site where hazardous waste and/or hazardous substances (including, but not limited to, petroleum products) have been or may have been used, stored, treated, handled, disposed, spilled, and/or released to the environment.

In addition to RECs, the ASTM E 1527-05 standard defines several other ways in which findings can be classified. These classifications include: historical RECs (HRECs), and *de minimis* conditions. HRECs are defined as conditions that, in the past, would have been considered a REC but which may or may not currently be considered a REC. A *de*

minimis condition is described as a condition that does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies.

Although not defined in either the ASTM standard or the SCGD, the term "relevant issues" may be used in this report in support of recognizing the goal of defining the RECs and/or AOCs. This term refers to information regarding the Site or surrounding properties that, in TRC's opinion, is necessary to an overall understanding of the Site and/or conditions that influence the environmental status of the Site.

1.2 Scope of Work

The Scope of Services for this Phase I ESA consisted of the following tasks:

- Performing a Site reconnaissance;
- Ascertaining current and historical Site conditions;
- Interviewing owners, operators, occupants, and/or local officials;
- Reviewing of environmental database and regulatory agency records; and
- Preparing a report summarizing the findings and conclusions.

No subsurface exploration or sampling has been performed as part of this Phase I ESA, as it was not defined in the scope of work. Information regarding subsurface conditions can only be obtained by traditional subsurface exploration techniques such as the collection and analysis of soil and water samples.

Items outside the scope of the ASTM E1527-05 standard include, but are not limited to: asbestos; radon; lead-based paint; lead in drinking water; wetlands; regulatory compliance; cultural and historic resources; industrial hygiene; health and safety; ecological resources; endangered species; indoor air quality; biological agents and mold. At the request of the Client, TRC has included in this Phase I ESA information which was readily ascertainable and practically reviewable regarding the presence or potential presence of asbestos, lead-based paint and universal waste. Note that this scope of work did *not* include sampling of any building materials.

1.3 Significant Assumptions

During this Phase I ESA, TRC relied on commercially-available database information; interviews with Site representatives, regulatory officials, and other individuals having knowledge of Site operations (past and present); and information provided by the User. Environmental records and anecdotal information pertaining to the Site or surrounding properties (e.g., information regarding spills/releases, historical operations, chemicals utilized, environmental cleanups, etc.) have been made available by the Client/User, tenants of the Client and other sources with past or present affiliations with the Site. In addition, TRC was provided with the property title/deed information by the Client. TRC has assumed that the information provided is true, accurate and complete. If information

to the contrary is discovered and/or if additional previous reports exist that were not provided to TRC, our findings and conclusions based on that information may not be valid.

Reliance on electronic database search reports is subject to the limitations set forth in those reports.

References to up-gradient and down-gradient properties are based on an estimated direction of ground water flow. Ground water flow directions are estimated based on surface topography, which typically reflects ground water flow direction. The actual direction of ground water flow may differ from that assumed and may be influenced by the presence, if any, of subsurface structures or large volume withdrawal wells in the area.

1.4 Limitations and Exceptions

The findings and conclusions presented herein are based upon the available information and Site conditions as they existed at the time of TRC's Site inspection. Information included in this report regarding the environmental conditions at surrounding properties and the potential impact to the Site are based on limited information and are considered provisional. Impacts to the Site from historical or off-site sources, including historic fill material, can only be confirmed by sample collection and analysis, which was not included as part of this scope of work.

The Site inspection was limited to areas that were readily accessible and free of safety hazards. Areas where floors or the ground surface was covered by objects (e.g., carpeting, floor coating, furniture, warehoused materials and equipment); areas beneath parked vehicles; behind walls; above ceilings; and the roof(s) of on-site building(s) were not inspected.

1.5 Accuracy and Completeness

TRC makes no guarantees as to the accuracy or completeness of information obtained from others during the course of this Phase I ESA report. It is possible that information exists beyond the scope of this investigation or that was not provided to TRC. Additional data subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. TRC is under no obligation to update this report to reflect such subsequent information. The findings presented in this report are based upon reasonably ascertainable information and observed Site conditions at the time of this assessment. Conditions may have changed since that time and the findings of this report are not meant to be indicative of future Site conditions. This report may not be relied on by any party other than the Client with whom TRC has contracted to prepare this report, or a party to whom a reliance letter has been issued.

1.6 Warranties and Representations

This report does not warrant against: (1) operations or conditions which were not in evidence from visual observations or historical information obtained; (2) conditions

which could only be determined by physical sampling or other intrusive investigation techniques; (3) locations other than the Client-provided addresses and/or legal parcel description; or (4) information regarding off-site location(s) (with possible impact to the Site) not published in readily ascertainable, publicly available records.

1.7 Continued Validity/User Reliance

This report is presumed to be valid, in accordance with the limitations specified in ASTM E 1527-05, for a period of 180 days from its completion (based on the date cited on the report cover), or until the Client obtains specific information that may materially alter a finding or conclusion in this report, or until the Client is notified by TRC that it has obtained specific information that may materially alter a finding or conclusion in this report. If, within the 180-day period, this assessment will be used by a different User than the Client, the subsequent User must also satisfy the User's Responsibilities as specified in ASTM E 1527-05.

1.8 Exceptions to the ASTM E 1527-05 Standard

No significant exceptions, additions, or deletions to the ASTM Standard were made during this Phase I ESA. At the request of the Client, TRC has included in this Phase I ESA information which was readily ascertainable and practically reviewable regarding the presence or potential presence of asbestos and lead-based paint. Note that this scope of work did *not* include sampling of any building materials.

2.0 SITE DESCRIPTION

2.1 SITE LOCATION AND LEGAL DESCRIPTION

The Site consists of six (6) land parcels acquired for the airport between 1925 and 1967 with the main airport address being 251 Maxim Road, Hartford, Hartford County, Connecticut. In total, the Site measures 201.58 acres in size. A site location map is included as Figure **1**. A more detailed site plan is provided as Figure 2.

According to information provided by the local Assessor, the map, block and lot number(s) for at least a portion of the airport property are: Map 333/Block 077 Lot 003. Title information provided to TRC by ConnDOT, which further supports a proper legal description, can be found on the Exhibit A map provided in Appendix A.

2.2 Physical/Environmental Setting

As indicated above, the Site is located in Hartford, Connecticut. It is surrounded primarily by a mix of businesses and light industrial properties. Noteworthy properties immediately adjacent to or in the immediate vicinity of the Site include the MDC Hartford Water Pollution Plant located at the southern end of the airport property and the CRRA Trash to Energy Facility located north of the airport property.

The Site is depicted on the United States Geological Survey (USGS) topographic map, Hartford South, Connecticut quadrangle (Figure 1). The nearest surface water body to the Site is the Connecticut River, which is located along the eastern side of the airport property. The Site is within the Connecticut River floodplain. The Site elevation is approximately 17 feet above mean sea level (MSL); local topography is relatively flat with minor hills to the west of the property. A man made berm along the eastern border of the property was installed to protect the airport and the regional area from Connecticut River flooding. As such, the anticipated direction of ground water flow is to the southeast.

Information regarding the geology at the Site and its surroundings has been obtained from the Surficial Materials Map of Connecticut (Stone, 1992) and the Bedrock Geologic Map of Connecticut (Rogers, 1985). According to the Surficial Materials Map, the surficial materials at and in the vicinity of the Site are identified as alluvium overlying fines. Specifically, these materials are characterized as a floodplain material commonly less than 5 feet thick, but along large rivers such as the Connecticut River the alluvium can be up to 25 feet thick. The alluvium is overlying fines of variable thickness. Previous subsurface investigations conducted at the Site indicate that subsurface soils consist of red-brown fine to coarse sand and gravel with cobbles and silt mixed in overlying grey – brown to red-brown silts with trace amounts of clay (Maguire Group, Inc., 2001). This is consistent with the characterization of alluvium. Portions of the Site may also be consisting of man-made fill consisting of earth, trash, or a combination of both (Storch, Inc. 1997).

According to the information obtained from the Bedrock Geologic Map, the bedrock underlying the Site is classified as Portland Arkose. The Portland Arkose is characterized as a reddish brown sandstone-like sedimentary rock (brownstone). It is common to the Hartford Basin of the Newark Rift Valley Terrane in the Central Lowlands of Connecticut.

The CTDEEP Water Quality Classifications Map (as accessed via the Connecticut Environmental Conditions Online Map Viewer) indicates that groundwater underlying the Site is classified as "GB". This classification indicates the water is not suitable for human consumption without prior treatment due to historic impacts but may be designated for the use of industrial process water and cooling waters. Historic assessment activities on the airport property have reported groundwater existing at a depth of 4.5 to 7 feet below grade with a varying southeast and/or southwest flow direction.

In addition, the mapping indicates that the Connecticut River is classified as "SB". This classification designates uses for the following; marine fish, shellfish and wildlife habitat, shellfish harvesting for transfer to approved areas for purification prior to human consumption, recreation, industrial and other legitimate uses including navigation.

2.3 Current and Past Site Use

2.3.1 Current Use and Descriptions of Structures, Roads, Appurtenances / Other Improvements

A shown on Figure 2 (Site Plan), the Site consists of 18 buildings that are located on the Brainard Airport property along Maxim Road and Lindbergh Drive. Runways identified at the Site include Runway 02-20 (paved), 11-29 (paved) and NE-SW (turf). Overall, the Site currently operates as the Hartford-Brainard Airport.

There are several main tenants (entities) which currently occupy the on-site buildings as part of the State of Connecticut facility under lease to the State of Connecticut. In addition to the entities listed below, additional sub-tenants are also conduct business at the facility and are listed in Section 4.2.6. These main tenants / entities currently existing on the Site include the following:

- ConnDOT: Airport owner
- Connecticut State Police and Connecticut Urban Search and Rescue (former CT Air National Guard property/building)
- Star Base (US Army) – Youth Educational Classrooms
- Atlantic Aviation
- VIP Avionics
- Professional Flight Training
- Aetna

A summary of available information associated with the existing Site buildings that include year constructed (if known), footprint, construction information and current occupant and usage is provided below.

Building # or Name	Year Built	Footprint* (square feet)	Construction Information	Occupant/Current Usage
Building A - Airplane Hangar / Office	Est. 1986	13,000	Metal Exterior	Aetna – airplane storage
Building B - FBO Hangar and Offices –	1967	15,760	Metal Exterior	VIP Avionics – airplane repair, maintenance and offices
Building C - FBO Hangar	1967	11,320	Metal Exterior	Atlantic Aviation – airplane repair and service
Building D - FBO Terminal	1984	6,000	Metal Exterior	Atlantic Aviation– offices and restaurant
Building E - FBO Hangar	1984	24,920	Metal Exterior	Atlantic Aviation - Total Aircraft Repair and Exxel Avionics – airplane maintenance and repair
Building F - ConnDOT Maintenance Building	1922	7,000	Brick Exterior	ConnDOT – airport equipment maintenance and storage
Building G - ConnDOT	1920	2,700	Brick Exterior	ConnDOT - Airport Manager Office / Fire & Rescue
Building H - Bureau of Aeronautics and Star Base Education Center	1927	2,730	Brick Exterior with full basement	Bureau of Aviation and Star Base Education Center (US Army) – office and classroom space
Building I - CT State Police / Urban Search & Rescue	1945	26,650	Brick Exterior	CT State Police/CT Urban Search and Rescue – Aircraft storage, vehicular storage, emergency equipment and supply storage
T-Hangar 1-10	1960	8,700	Metal Exterior	T-Hangar – individual tenants / spaces - airplane parking
T-Hangar 11-20	1966	9,920	Metal Exterior	T-Hangar – individual tenants / spaces - airplane parking
T-Hangar 21-30	1966	9,920	Metal Exterior	T-Hangar – individual tenants / spaces - airplane parking
T-Hangar 230	Est. 2003	20,000	Metal Exterior	T-Hangar – individual tenants / spaces - airplane parking

Building # or Name	Year Built	Footprint* (square feet)	Construction Information	Occupant/Current Usage
T-Hangar 240	Est. 2003	20,000	Metal Exterior	T-Hangar – individual tenants / spaces - airplane parking
FAA Control Tower	Est. 1990	600	Brick / Metal Exterior	FAA – Airport Control Tower
Connecticut Aero Tech School	2008	30,000	Concrete Block Exterior	State of CT – Aero Technical School -aviation maintenance and repair courses
ConnDOT Salt/Sand Shed	1970	1,000	Metal	ConnDOT – Salt / Sand storage building
CT State Police – Abandoned Building	Unknown 1923 - 1952	1,150	Brick	CT State Police – unused small brick building located in State Police eastern equipment storage yard

*Footprint determined from Figure 2 site plan structure dimensions.

In addition to the structures listed above, a fuel farm area consisting of a large concrete containment area, a 12,000-gallon Jet A aboveground storage tank (AST), a 12,000-gallon aviation gas AST, a 275-gallon Jet A AST and a 275-gallon Avgas AST, plus associated piping and product delivery apparatuses are is located approximately 180-feet northwest of Building E. The area also contains a catch basin with holding tank in the fuel loading / unloading area.

The following is a summary of the utilities serving the Site. Information regarding utilities was obtained from a review of Airport Master Plans, available ConnDOT files and discussions with the Airport Manager (Mr. Kurt Sendlein).

Electrical Service

Electrical power service is provided to the Site from Connecticut Light & Power (CL&P) utility poles located west of Lindbergh Drive from Maxim Road. Service to airport buildings is via underground cables from the utility poles.

Gas Service

Gas service to the Site is provided by Connecticut Natural Gas Company (CNG) through four inch and six inch gas mains located beneath Maxim Road and Lindbergh Drive. Service laterals then connect to the gas main to serve Site buildings.

Water Service

The Metropolitan District Commission (MDC) provides water to the airport through an eight inch water main located east of Lindbergh Drive and south of Maxim Road with service laterals to the buildings.

Sanitary Sewer

The MDC also provides sanitary sewer service for the Site. Based on information obtained from a historic Airport Master Plan Report, three pump stations are located on airport property to serve the buildings along Lindbergh Drive. However, information provided by the Airport Manager identified only one pump station located in the northwest portion of the Site. Buildings located on the northern portion of the Site connect via lateral to the sewer line just north of and parallel to Maxim Road.

2.3.2 Past Site Use

The Hartford-Brainard Airport was dedicated on June 10, 1921 as Brainard Field. Prior to development as an airport, the Site was historically utilized as a cow pasture. The field was dedicated as the first municipal "flying field" in New England and also holds historical significance as being the first landing spot after Charles Lindbergh's historic first transatlantic flight. The Connecticut National Guard Air Squadron was organized at the Site in 1923. The Connecticut National Guard utilized the airport until sometime after World War II for pilot training.

Due to the proximity of the Connecticut River, the elevation of the airport and its location in the river's floodplain, the airfield was prone to severe flooding. Following the devastating floods of 1936 and 1938, the US Army Corps of Engineers constructed the Clark Dike around the north and east sides of the airport property to prevent flooding.

The original airport site totaled 351 acres and accommodated four landing strips, three of which have since been abandoned. In 1959, the configuration of the airport changed dramatically. The State of Connecticut purchased the airport, including approximately 200 acres and the existing Runway 2/20. The crosswind Runway 11/29 was constructed in 1966 to provide landing capability by small aircraft in extreme east/west wind conditions.

Additional information regarding the history of the Site obtained as part of the historical records review can be found in subsequent sections of this report.

2.4 Adjoining Property Information

The properties adjoining the Site are as follows:

North: Connecticut Resource Recovery Authority (CRRA) Trash to Energy Plant

East: Connecticut River

South: MDC Water Pollution Control Plant

West: Commercial / Light Industrial Properties

Additional information regarding the adjacent properties is included in subsequent sections of this report.

2.5 Surrounding Property Information

Surrounding properties generally consist of heavy industrial (electrical power plant) to the north; Connecticut River with residential and commercial properties beyond to the east; public water pollution control plant (sewage treatment) to the south and commercial and light industrial properties to the west.

3.0 USER-PROVIDED INFORMATION

According to ASTM E 1527-05, certain tasks that may help identify the presence of RECs associated with the Site are conducted by the Phase I User. These tasks include: reviewing title records for environmental liens or activity and land use limitations and providing specialized knowledge related to RECs at the Site (e.g., information about previous ownership or environmental litigation). Information provided by the User is provided below and documents provided by the User are listed in Section 7 of this report.

3.1 Title Records

The Rights-of-Way Division of the ConnDOT provided TRC with the title records for the Site. The mapping also provided to TRC "Exhibit A" to the Memorandum of Understanding between ConnDOT and the Connecticut Airport Authority (CAA), which documents the property/parcel ownership, can be found in Appendix A to this report.

3.2 Environmental Liens or Activity and Use Limitations

According to information provided by the Client, properties owned by the State of Connecticut are not subject to liens or activity and use limitations imposed by others (e.g., the State may implement a land use restriction on a piece of property that they own, however others may not do so). As such, there are no known environmental liens or activity and/or use limitations with regard to environmental issues that have been placed on the Site.

3.3 Specialized Knowledge

Specialized knowledge provided by Airport Manager Mr. Kurt Sendlein and facility Fire Chief Mark Lewandowski (both representatives of the Client - ConnDOT) is included in this report where applicable.

3.4 Commonly Known or Reasonable Ascertainable Information

Documentation supplied to TRC by the Client/User is discussed herein and is referenced in subsequent sections of this report, among the full suite of documents reviewed as part of this Phase I ESA.

3.5 Owner, Property Manager and Occupant Information

TRC was supplied with Site Owner and Occupant information by ConnDOT and/or its representatives at the airport. This Information was used in this Phase I ESA and has been incorporated into this report.

3.6 Reason for Performing Phase I

It is TRC's understanding that per Public Act 11-84, the full suite of airport operational responsibilities will be transferred from ConnDOT to the newly formed CAA, but that environmental liabilities may remain with ConnDOT. As such, this Phase I ESA is being conducted to establish potential liabilities that ConnDOT may be called upon in the future to address.

4.0 RECORDS REVIEW

4.1 Previous Environmental Reports

The following is a summary of the reasonably ascertainable and readily reviewable relevant previous environmental reports associated with the Site. All available reports associated with the Site, whether summarized in this section or not, are referenced in Section 7.

Connecticut Military Department, December, 1993. ***Connecticut Army National Guard Underground Storage Tank Program, CONNDPW Project No. BI-2B-760, Conn Military Department Project No. MD-94-Z-B, Tank Removal Report, Brainard Field Armory, Hartford, Connecticut.***

On December 2, 1993, the Connecticut Military Department contracted the removal of an abandoned steel 1,500-gallon JP-4 (kerosene/gasoline mixture) underground storage tank (UST). The tank was located adjacent to the southeastern corner of the Connecticut Army National Guard Building located at 269 Maxim Road, Brainard Airport, Hartford, Connecticut. The UST was described as being in generally "poor and rusted" condition. No groundwater was encountered during the initial removal of the tank. Confirmatory soil samples were obtained from the tank grave and analyzed for total petroleum hydrocarbons (TPH). Based on laboratory results of initial sidewall sampling, additional excavation activities were completed and 59 tons of contaminated soil was removed from the northern sidewall, western sidewall and bottom portion of the excavation. Excavation of soil from the western sidewall had to be halted due to the presence of subsurface utilities (sewer line) and the Armory building foundation. Excavation of soils from the bottom of the tank grave was halted due to the presence of the water table at the depth of 9.5 feet. A CTDEEP representative confirmed that no further remediation could be implemented at that time due to the possible undermining of the building structure.

Laboratory results indicated that residual contamination existed in Site soils that could not be removed due to physical structures prohibiting further excavation. Polyethylene sheeting was reportedly installed in the excavation before it was backfilled will clean soil.

Based on information contained in the report, it was concluded that a release of JP-4 fuel from a leaking UST was identified outside the southeast corner of the current Connecticut State Police / Urban Search & Rescue building (former CT National Guard building). Remedial soil excavation activities were conducted and residual impacted soil exceeding regulatory criteria was left in place due to proximity to subsurface utilities and the potential for undermining the building foundation. No groundwater sampling was completed in the release area as part of the UST removal or as part of the environmental assessment activities conducted in the area of the documented release.

Storch Associates, May, 1997. ***Task 120 – Preliminary Site Evaluation, Ramp Reconstruction, Brainard Airport – Central Portion, Hartford, Connecticut.***

A Task 120 – Preliminary Site Evaluation (PSE) was completed by Storch Associates on behalf of ConnDOT prior to commencement of a ramp reconstruction project proposed for a portion of Brainard Airport in Hartford, CT. While the PSE was not intended to be a comprehensive review of the entire airport, limited information regarding the area surrounding the ramp reconstruction project was provided.

Storch's May, 1997 PSE states that the proposed ramp reconstruction area consisted of a parking lot for aircraft and a heliport and was located in the central portion of the airport. The area had been part of the airfield and runway/taxiway system prior to 1965, was unpaved from 1965 to 1980, and then was paved until the date of the site investigation. A maintenance hangar and USTs were located approximately 150 meters north of the project area. Leaking underground storage tanks (LUSTs) and contaminated soil had reportedly been removed from the northern and central portions of the airport property approximately seven years prior to the site investigation. Various UST and AST areas and maintenance hangars were located in the northern portion of the property.

The PSE cites a December, 1987 spill of 700 gallons of "Jet-A fuel" was reported at the fuel farm in the northwestern corner of the property. The spill was sanded, contained, and removed, but no other information regarding the incident was found. The PSE also notes a February, 1985 spill of 70 gallons of gasoline and a June, 1985 spill of 50 gallons of aviation fuel. Both were contained and cleaned and the February spill was "closed" whereas the June spill's status was not indicated. Numerous other small spills have been reported, and were assumed to be of minimal significance by Storch.

Three (3) leaking USTs previously used for diesel fuel were reported to have been removed from the airport in October, 1988. The tanks included one 10,000-gallon and two 4,000-gallon tanks, and remediation was listed as soil removal. The 10,000-gallon tank installed in December, 1973 and was removed from "Parcel F" at Brainard Airport, which was occupied by Charter Oak Aviation. The tanks were reportedly removed in accordance with all the appropriate protocol. Complete remediation was listed for each tank.

Ten (10) leaking USTs of unknown installation date were reportedly removed from Brainard Airport in March, 1990. The tanks were used for aviation fuel and included four (4) 10,000-gallon and six (6) 4,000-gallon USTs. A figure titled "Removal of Aviation Fuel Tanks at Hartford Brainard Airport" shows the location of the tanks and removal plans, in addition to a recovery well to remain near two of the 10,000-gallon tanks. A May 3, 1990 letter from ConnDOT Bureau of Administration to CTDEEP referenced "1700 yards of contaminated soil stockpiled" at Brainard airport. This letter is likely related to the prior removal of LUSTs from the area. A September 28, 1990 memo from a consulting firm to CTDEEP cites the cleanup of Brainard Airport soils in the northern portion of the airport, although the data is unclear whether the soil was disposed of and/or where it originated from. In addition, no information regarding the extent of the contamination or cleanup was found.

Hydrostatic test results were provided for two tanks located at the airport. The first was a 10,000-gallon steel diesel UST located at Organizational Maintenance Shop #7 which failed the hydrostatic test conducted on August 2, 1988. Correspondence indicated that the tank was no longer in use and the contents were removed. No information was provided on the tank's installation date. The second tank was a 5,000-gallon, steel, unlined UST which was installed in 1955 and had been used by the National Guard Armory for heating oil. The tank failed the hydrostatic test conducted on October 26, 1988.

The PSE also provided UST notifications on four additional USTs at Brainard Airport Headquarters. Documentation of a 2,000-gallon fuel oil tank installed in 1960, a 2,000-gallon diesel tank installed in 1965, a 250-gallon used oil tank installed in 1965, and a 2,000-gallon unleaded gasoline tank installed in 1977 was provided. An unlabeled figure shows the tanks' proximity to buildings identified as #85-002 and #85-003.

A September 28, 1990 memo (with lab data and site sketch) from a consulting firm (Metcalf & Eddy) to CTDEEP discussed the removal of a "fuel distribution boxes and contaminated soils" from the northern end of the airport in the vicinity of the National Guard Armory. No information regarding the extent of contamination and/or cleanup was provided.

Storch concluded that there was a potential for the release and southward migration of petroleum products, aircraft fluids and/or solvents from historic maintenance activities, historic spills and/or UST leakage. They recommended that a Task 210/220 – Surficial/Exploratory Site Investigation be conducted in the proposed reconstruction area located in the central portion of the Site.

Information presented in the report identified 13 suspected leaking underground storage tanks at the Site located in at least seven (7) separate locations.

Maguire Group, Inc., July, 2011. ***Task 210 - Subsurface Site Investigation Report, Brainard Maintenance and ARFF Facility, Brainard Airport, Hartford, Connecticut.***

A Task 210 Subsurface Site Investigation report was completed on July 29, 2011 by the Maguire Group, Inc. for planning purposes associated with the planned construction of a new ConnDOT maintenance and Aircraft Rescue and Fire Fighting (ARFF) facility at Brainard Airport. The 9,340 square feet facility will be located west of the current maintenance building in the northwestern corner of the airport property. The facility will be used to store equipment and vehicles, and also will have rooms for boarding employees. The intent of the investigation was to determine the presence or absence of soil and/or groundwater contamination with respect to planned construction activities.

On July 7, 2010, fifteen Geoprobe borings were drilled within the property boundaries. The borings were advanced to a maximum depth of eight feet below ground surface. The borings were also field screened for volatile organic compounds (VOCs) using a photoionization detector (PID) and subsurface soil samples were collected for lab analysis. Two representative grab groundwater samples were also collected from two select borings.

The samples were analyzed for the presence of volatile organic compounds (VOCs), base neutral/acid extractable semi-volatile compounds (BNAs), extractable total petroleum hydrocarbons (ETPH), polychlorinated biphenyls (PCBs) and total and SPLP RCRA 8 metals. Select soil samples were found to contain BNAs with an elevated concentration exceeding regulatory criteria at 1 to 4 feet below surface. Leachable lead was reported at one boring location that exceeded currently regulatory criteria in a soil sample obtained from a depth of 2 to 4 feet below grade. Soil samples obtained as part of the investigation also reported low levels of ETPH and VOCs below CTDEEP Remediation Standard Regulation (RSR) criteria. The Maguire Group designated two Areas of Environmental Concern (AOECs) based on these results of this investigation. There were also soil samples found to contain concentrations above laboratory detection limits for ETPH, BNAs and VOCs, but below CTDEEP RSR criteria; these areas were determined to be low-level areas of environmental concern (LLAOECs).

Groundwater at the Site and the surrounding area has been designated by the CTDEEP as "GB", indicating that groundwater is within a historically highly urbanized area or an area of intense industrial activity and where a public water supply is available. Such groundwater may not be suitable for human consumption without treatment due to waste discharges, spills or leaks of chemicals or land use impacts. Groundwater beneath the Site was presumed to flow in an easterly direction towards the Connecticut River. Groundwater was observed in all borings at depths ranging from 4.5-feet to 7-feet below grade.

Based on the study being completed for proposed construction activities, the groundwater laboratory analytical data was compared to CTDEEP Surface Water Effluent Limits. The report indicated that one of the two groundwater samples yielded dissolved arsenic exceeding CTDEEP GP to Surface Water Effluent limit; in addition, ETPH and toluene were detected at concentrations below CTDEP GP to Surface Water Effluent limit. Based on these results and documented evidence of area leaking underground storage tanks (LUSTs), the Maguire Group designated the entire project limits as an AOEC for groundwater. Copies of the previous environmental reports can be found in Appendix B.

4.1.1 Standard Environmental Record Sources

A database search report that identifies properties listed on State and Federal databases within the ASTM-required radii of the Site was obtained from EDR. A copy of the EDR database search report is included as Appendix C.

As opposed to choosing the mid-point of the property as the locus around which the search radii would be referenced, the search was conducted at the appropriate distances from the Site boundary, resulting in a more accurate report (referred to as an "Area Report"). Given the large size of the Site, a "shape file" reflecting the boundary as defined on the Exhibit A map was created and digitized using GIS software provided to EDR in order to create a report that adequately covers the search radii as specified in ASTM E 1527-05. Therefore, the format of the Area Report differs from a typical radius report. Specifically, the most obvious difference is that the Site is not referred to in the report as the "Target Property" as in a typical radius report. Rather, all of the

properties, including the Site itself, that are encompassed by the ASTM search radii are randomly numbered. The result is that the information provided in the report regarding the Site tends to be listed following information regarding other nearby sites captured in the search radii. This does not, however, mean that there is any key information missing with regard to the database information. The information is simply presented in a different order.

TRC's Area Report review process focused on discerning which properties identified in the report are the most relevant to the Site and its immediate surroundings and that have the greatest potential to adversely impact the Site and the vicinity. Specifically, the following factors were considered in determining as to which records contained in the report required the most scrutiny:

(1) Whether the listed property is up-gradient or down-gradient of the Site based on the local topography and the anticipated east to southeasterly ground water flow direction;

(2) The distance between the Site and the listed property;

(3) The type of database in which the property is listed and whether the presence of soil or ground water contamination is known; and

(4) The status of the listed property.

As such, based on these evaluation criteria, only three (3) properties (including the Site) of the properties listed in the report and plotted on a digital custom-plotted map included in the database report are discussed in further detail below. Sites listed in the database and known to exist on the ConnDOT airport property have been included in what is considered the "Site". Note that 18 properties could not be mapped and are considered "orphan properties". Two of the properties listed in the "orphan properties" list were identified as Brainard Airport.

EDR Database Results – Hartford-Brainard Airport (Target Property)

The EDR report generated for this investigation identified the Subject Site four (4) separate databases. The Site was listed in the following databases:

State UST - Underground Storage Tank Database – The UST database is a listing of registered underground storage tanks maintained by the CTDEEP. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administrating the UST program.

The Site was listed in this database due to registered USTs associated with the site. These USTs were identified by EDR at 58 Lindbergh Drive and are associated with an occupant of the site, Million Air:

Tank ID	Date Installed	Date of Last Use	Size (Gallons)	Contents	Construction	Status
11810-1	10/01/1984	11/01/1998	6000	Gasoline	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
11810-2	10/01/1984	11/01/1998	6000	Gasoline	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
11810-3	10/01/1984	11/01/1998	6000	Gasoline	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
11810-4	10/01/1984	11/01/1998	6000	Gasoline	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
11810-5	10/01/1984	11/01/1998	6000	Gasoline	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
11810-6	10/01/1984	11/01/1998	6000	Gasoline	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground

The following Underground Storage Tanks (USTs) are identified by EDR at 233 Maxim Road and are listed as being owned by ConnDOT:

Tank ID	Date Installed	Date of Last Use	Size (Gallons)	Contents	Construction	Status
8620-1	01/01/1965	08/01/1988	2000	Diesel	Asphalt Coated or Bare Steel	Tank Removed From Ground
8620-2	01/01/1960	08/01/1988	2000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
8620-3	01/01/1977	08/01/1988	2000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
8620-4	01/01/1965	08/01/1988	250	Used Oil	Asphalt Coated or Bare Steel	Tank Removed From Ground

Tank ID	Date Installed	Date of Last Use	Size (Gallons)	Contents	Construction	Status
8620-5	08/01/1988	Currently In Use	4000	Gasoline	Fiberglass Reinforced Plastic	Currently In Use
8620-6	08/01/1988	Currently In Use	4000	Diesel	Fiberglass Reinforced Plastic	Currently In Use
9978-1	01/01/1950	01/01/1983	4000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-2	01/01/1950	01/01/1983	10000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-3	01/01/1950	01/01/1983	4000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-4	01/01/1950	01/01/1983	4000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-5	01/01/1950	01/01/1983	4000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-6	01/01/1950	01/01/1983	4000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-7	01/01/1950	01/01/1983	4000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-8	01/01/1950	01/01/1983	10000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-9	01/01/1950	01/01/1983	10000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-10	01/01/1950	01/01/1983	10000	Gasoline	Asphalt Coated or Bare Steel	Tank Removed From Ground
9978-11	08/01/1988	04/01/1998	4000	Other Petroleum	Not Reported	Tank Removed From Ground

The following USTs were identified by EDR at 269 Maxim Road and are listed as being owned by the Air National Guard:

Tank ID	Date Installed	Date Last Used	Size (Gallons)	Contents	Construction	Status
9013-1	01/01/1955	12/01/1989	5000	Heating Oil	Asphalt or Bare Steel	Tank Removed From Ground
9013-2	12/01/1989	09/01/1998	5000	Heating Oil	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
9013-3	01/01/1985	12/01/1995	2000	Gasoline	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
9013-4	06/01/1974	12/01/1989	1000	Diesel	Asphalt Coated or Bare Steel	Tank Removed From Ground
9013-5	12/01/1989	09/01/1998	3000	Diesel	Coated & Cathodically Protected Steel (sti-P3)	Tank Removed From Ground
9013-6	01/01/1955	01/01/1955	1500	Gasoline	Asphalt Coated or Bare Steel	Filled With Inert Material

EDR also identified a single UST associated with a tenant of the airport property, Charter Oak Aviation; identified as Tank ID 9567-1. The 10,000 gallon asphalt coated or bare steel gasoline UST was installed October 1, 1975, last used October 1, 1989, and has reportedly since been removed.

CT LUST- Leaking Underground Storage Tank List- Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

EDR identifies 233 Maxim Road in the LUST database from October 25, 1988. According to EDR, gasoline was detected in the soil half-way down the access road toward the tower. As a result, two LUSTs were removed; a 2,000-gallon diesel UST and a 2,000-gallon fuel oil UST.

EDR also identifies 269 Maxim Road in the LUST database, but it only notes the date of the incident, September 14, 1998.

State LWDS – Connecticut Leachate and Wastewater Discharge Sites – The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the CTDEEP. These maps locate surface and groundwater discharges that correspond to the following:

A.) Have received a waste water discharge permit from the state,

B.) are historic and now defunct waste sites, and

C.) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EDR identified the Site in the LWDS database for discharges to ground surface.

RCRA-CESQG – Conditionally Exempt Small Quantity Generator - This database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and recovery Act (RCRA). Small quantity generators (SQGs) generate between 100kg and 1,000 kg of hazardous waste per month.

The EDR report identified Million Air located at 58 Lindberg Drive as a Resource Conservation Recovery Act Conditionally Exempt Small Quantity Generator (RCRA-CESQG) at the Site.

CT Manifests – Hazardous Waste Manifest Data – This database lists facility and manifest data. A manifest is a document that lists and tracks hazardous waste from the generator through transporter to disposal facility.

The EDR report identified a hazardous waste manifest associated with the removal of 140 pounds of hazardous waste solids - mercury from 233 Maxim Road on January 20, 1994.

CPCS – Contaminated or Potentially Contaminated Sites in Connecticut – This database list represents the "Hazardous Waste Facilities" as defined in Section 22a-134f of the Connecticut General Statues (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste is present subject to RCRA; Sites that are included in EPA's (CERCLIS); Sites that are subject of an order issued by the Commissioner of CTDEEP that required investigation and remediation of a potential or known source of pollution; and Sites that have entered into on of the Department's Voluntary Remediation Programs.

According to EDR, 233 Maxim Road is listed in the Contaminated or Potentially Contaminated Site (CPCS) database. According to information in the CPCS a 1,000 gallon diesel tank failed a tightness test on August 8, 1988, and was pumped out.

NPDES –National Pollutant Discharge Elimination System – This database is associated with a listing of discharge permits issued by the CT DEEP.

The EDR report listed 233 Maxim Road in the NPDES database. Reportedly, ConnDOT at 233 Maxim Road holds a permit for vehicle maintenance wastewater and industrial activity stormwater.

FUDS - Formally Used Defense Site - The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

According to EDR, the Brainard Airport is also a Formally Used Defense Site (FUDS) used from 1940-1942 Army Air Force for training purposes.

FINDS - Facility Index System/Facility Registry System – The FINDS database contains both facility information and "pointers" to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-Docket (Criminal Docket System used to track criminal enforcement actions for all environmental statues), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statues), and PADS (PCB Activity Data System).

Based on information contained in the EDR report, 58 Lindbergh Drive was listed in the FINDs database and is known to be located on the Brainard Airport property.

EDR Database Results – Off-Site / Adjoining Properties

Two off-site properties were listed in the EDR report that requires further mention as part of this investigation. The properties include the following:

Mid-CT Resource Recovery Facility, 300 Maxim Road, Hartford, CT – The 300 Maxim Road property located immediately north of the Subject Site beyond Maxim Road, is the site of the Mid-Connecticut Resource Recovery Facility (trash to energy plant) which EDR indicates as being listed in the UST, LUST, Oil & Chemical Spill (SPILLS), and National Pollutant Discharge Elimination System (NPDES) databases. A hazardous waste manifest was also identified associated with the property.

Based on a review of information associated with the adjoining property, there is no evidence that historic operations at the adjoining property have impacted the Subject Site.

MDC Hartford Water Pollution Control Facility, 240 Brainard Road, Hartford, CT – The EDR report documents 240 Brainard Road (located immediately south of the Site) as the location for the Hartford Water Pollution Facility with listings in the UST, SPILLS, and NPDES databases with numerous hazardous waste manifests.

Based on the presumed regional groundwater flow direction, the above referenced off-site properties do have the potential to possibly impact portions of the subject property. However, regional groundwater quality (including beneath the Subject Site) has historically been degraded by past industrial use and therefore it would be expected that groundwater quality beneath the Subject Site may already possess some degree of impacts not necessarily associated with the two above referenced properties.

4.2 Additional Environmental Information Sources

As part of the preparation of this Phase I ESA, there were a variety of sources consulted in an attempt to supplement the ASTM-required Federal and State records review discussed in the previous section of this report. Examples of the other types of sources of information include:

- CTDEEP File Room;
- CTDEEP Case Managers;
- Local Municipal Records;
- ConnDOT-Provided Records;
- Internal (TRC) Records (Primarily related to building materials assessments);
- Airport Manager Interviews;
- Tenant Interviews and File Searches; and
- Other Persons Knowledgeable of the Site (e.g., Former Airport Managers, Maintenance Personnel, Fire Chief).

A brief discussion regarding each of these sources of information is included below, following which, as appropriate, there are sections in which the findings of the reviews of each source are documented.

4.2.1 CTDEEP Review (File Room and Information Obtained from Case Managers)

A search of the files derived from CTDEEP Bureau of Materials Management and Compliance Assurance, Bureau of Water Protection and Land Reuse, Underground Storage Tank Division, Oil and Chemical Spills Division and PCB Division was conducted between July and August 2012. In addition, TRC contacted the CTDEEP personnel listed in the Department database as being the case manager(s) for the Site to discern (1) if there were additional files in active use that had not yet been made available through the CTDEEP's file room and (2) to inquire if they had any information to offer with respect to the overall environmental status of the Site. During a phone conversation with Mr. Kenneth Feathers of the CTDEEP, TRC personnel were made aware of an interim file storage area not accessible to the public. Specifically, files that are in the process of being transitioned between case managers' desks and the public file rooms are housed in this space and it is TRC's understanding that the files contained herein are voluminous. Given the lack of ready access to this interim storage space, TRC considers anything contained therein not to be readily accessible.

4.2.1.1 CTDEEP Review Results

UST Notification Forms, correspondences, and hand drawn maps confirmed the existence of a 10,000-gallon AVGAS UST on "Parcel F" of Brainard Airport. The documents confirmed the tank installation date, 1973, and removal date, October 1989. A transfer of

ownership from Corporate Air, Inc. to Charter Oak Aviation was noted on a UST Facility Notification form.

Certification of Registration, Stormwater Activity Associated with Industrial Activity General Permit, Issued March 19, 1998 and expires October 1, 2002. There are two violation forms from 1992 and 1997 for the failure of supplying ground water samples, but they were re-registered in 1998.

A CTDEEP "LUST Lookup" documents notes on the removal of USTs from the Army National Guard at Brainard Airport. The LUST incident report was dated September 14, 1998, but the correspondence notes are dated as received on April 7, 1999. It reports the removal of the 2,000-gallon gasoline UST and 3,000-gallon diesel UST with no impacted soils, but the removal of the 5,000-gallon UST had impacted soils that were removed. This coincides with previous findings.

Correspondence, May 31, 2005, From Sarah Smith, Madison Environmental Group, Inc. To Oil & Chemical Response Division, Connecticut Department of Environmental Protection, Brainard Airport, Hartford, Connecticut.

The letter reports a spill that occurred on April 21, 2005 on a parcel of Atlantic Aviation Services leased from the ConnDOT, Brainard Airport, Hartford, Connecticut. The spill occurred in the grassy area to the east of the fuel truck parking area. The area impacted was reported as 8 feet by 30 feet. Manifests attached to the letter report a total of 51.38 tons of petroleum contaminated soils were removed from the site. Confirmatory soil samples revealed the impacted soil was completely remediated.

Emergency Response and Spill Prevention Division – Emergency Incident Report – CTDEEP File Review

The following summaries describe the largest spills reported on the airport property:

On December 23, 1993, a 1,500-gallon JP-4 tank was removed along with contaminated soil from the Connecticut National Guard facility at Brainard Airport. Reportedly the tank grave showed evidence of the tank leaking. The closure report states the excavation met Class GB groundwater standards but all petroleum impacted soils could not be removed due to subsurface utility lines and the threat of compromising the building by undermining the foundation. The full excavation could not be completed due to the structural integrity of an adjacent building. (Note that this is the UST at the Air Guard Tank area described previously in this report.)

On December 10, 1996, 300 gallons of Jet A fuel were released on the airport property at an unreported location. The spill was reportedly due to an overfill event. The status of the spill is closed.

On October 18, 1997, 10 gallons of Jet A fuel was released due to an overfill event. The spill was reported as sanded and absorbed. The status of the spill is closed.

On December 18, 1997, 15 gallons of Jet A fuel was released due to overfill. The spill was sanded and picked up. The status of the spill is closed.

On July 25, 1998, 12 gallons of aviation fuel were released onto the ground at 20 Lindbergh Drive due to an unspecific valve failure. The spill was cleaned with absorbent material. The status of the spill is closed.

On September 17, 1998, approximately 15 gallons of No. 2 Heating Oil fuel was released when a tank was being removed from the Army National Guard Facility. The soil was reported as removed from the tank grave. The status of the spill is closed.

On January 26, 1999, 20 gallons of aviation fuel were released to the ground surface at 20 Lindbergh Drive, leased by Million Airways. The report describes the removal of a tank and soil. Apparently there was a motor oil LUST at the site. The status of the spill is closed.

On February 9, 2000, less than 10 gallons were released when two planes hit one another on the runway causing a wing to spilt open spilling fuel. Absorbent material was applied to the spill. The status of the spill is closed.

On July 27, 2000, 50 gallons of aviation fuel were released into a dike (catch basin) which was then pumped to the ground and storm drains. The incident occurred at 20 Lindberg Drive, leased by Million Air Aviation. The status of the spill is closed.

On April 2, 2001, 5 gallons of Jet A fuel was released due to overfill of an unknown container at the Million Air Hangar. The spill was reported as cleaned and contained. The status of the spill is contained.

On June 30, 2012, approximately 17 gallons of hydraulic oil from a lawn mower were released on the flood control dike due to hose failure. The status of the spill remains open.

4.2.2 Local Municipal Records Review

Local municipal sources that were contacted to obtain information relevant to this Phase I ESA include: Department of Health/Environmental Division; Fire Marshal/Fire Chief; Building / Engineering Department; and Town Assessor. (Note that the title records were provided to TRC by ConnDOT as stated earlier in this report. The Assessor's office was contacted to determine map/block and lot information as presented in Section 2.1.)

4.2.2.1 Local Municipal Records Review Results

Hartford Department of Health and Human Services

No information was located associated with the Subject Site.

Hartford Fire Marshal

TRC reviewed available files contained within the Hartford Fire Marshal office. Information contained in the files supported historic UST information already available for the Site and also identified four (4) additional historic USTs historically identified on the airport property in 1967. The tanks included a 1,000-gallon, a 2,000-gallon and a 3,000-gallon petroleum USTs associated with the Hartford Airmotive business located at

Brainard Airport. The tanks were to be removed upon installation of four (4) 10,000-gallon USTs at the Site. The Fire Marshal indicated that the old tanks were still in the ground and two of the four new tanks had been installed. On a later visit the Fire Marshal reported the old tanks were still in the ground and were reportedly being utilized for auto fuel and used oil storage. No specific information was provided associated with the location of the USTs.

The Fire Marshal's files also documented existing USTs in 1982 associated with the State of Connecticut Dept. of Maintenance at the Brainard Airport and the USTs associated with the Connecticut National Guard facility at Brainard Airport. All information contained in the files had been previously obtained by TRC from other sources. However, the Fire Marshal's files did list two (2) additional USTs associated with the National Guard facility previously not identified. The tanks were reported to be a 1,000-gallon unleaded gasoline tank and a 500-gallon used oil tank. A sketch was also attached to the file that included the location of the 1,000-gallon tank but the 500-gallon used oil tank was not identified on the drawing.

Building / Engineering Department

No information was located associated with the Subject Site.

Town Assessor

Information obtained from the Town Assessor was limited to the map/block and lot information as already noted in Section 2.1.

4.2.3 ConnDOT-Provided Records

As the Phase I ESA activities commenced, personnel from ConnDOT's Environmental Compliance Division provided TRC with documents regarding the Site. In addition, TRC was given access to the reports housed in ConnDOT's Bureau of Aviation. Generally speaking, the documents obtained from the Environmental Compliance Division consisted of a combination of soil and groundwater investigation and/or remediation reports and building materials assessment and mitigation reports. Those obtained from the Aviation Bureau generally related more to airport operations, facilities and maintenance issues, airport planning, and compliance (e.g., stormwater pollution prevention and spill prevention plans). A limited number of soil and groundwater investigation and remediation reports were located in this bureau's files.

4.2.3.1 ConnDOT Records Review Results

The records which were obtained from ConnDOT as part of this ESA are either summarized above in Section 4.1 or were utilized to aid in the overall understanding of the Site and are therefore referenced appropriately throughout this document as necessary. In addition, there are excerpts of these documents which are included as supporting documentation.

4.2.4 Internal (TRC) Records Review

As TRC has been under contract to ConnDOT to aid in both soil and groundwater assessments/management and building materials assessments/mitigation, TRC conducted an internal review of files relevant to this Phase I ESA.

4.2.4.1 TRC Records Review Results

The review of TRC's files yielded reports regarding building materials. Although not typically included in the scope of an ASTM or SCGD Phase I ESA, TRC was specifically requested by ConnDOT to include reasonably ascertainable information regarding building materials issues such as potential asbestos-containing material (ACM) and lead-based paint. A summary of the available reports related to building materials present or historically present at the Site is included in Section 5.2.17.2.

4.2.5 Airport Manager Interviews

Prior to the initiation of the site reconnaissance portion of this Phase I ESA, the Airport Manager, Mr. Kurt Sendlein was contacted by TRC to brief him on the Phase I process and to explain specifically what types of information TRC personnel would be seeking during the site inspection. Upon arrival at the Site and throughout the inspection, questions related to current site conditions, past conditions, the presence of tanks, chemical storage, spills, etc. were posed to the manager by TRC.

4.2.5.1 Airport Manager Interview Results

Given the extensive role of the airport manager and the amount of information obtained from him, it is not conducive to summarizing all in this section. Rather, relevant information obtained from Mr. Kurt Sendlein is contained throughout this report.

4.2.6 Airport Tenant Interviews and File Searches

Although the land on which the airport sits is owned by the State of Connecticut and the airport is currently operated by ConnDOT, there are several tenants with leaseholds (or subleases) at the Site. These tenants currently include the following:

- Atlantic Aviation
- Total Aircraft Maintenance and Parts
- Exxel Avionics
- Connecticut Flight Academy
- Wings Sports Bar & Grill
- VIP Aircraft Maintenance
- VIP Avionics, Inc

- VIP Aero Avionics, Inc.
- Premier Flight Center
- Aetna Insurance (Hangar Area)
- Sutton James (Aircraft Insurance – Office Space – Aetna Hangar)
- Doyle, D'Amore & Balducci (Office Space - Aetna Hangar)

In addition to the businesses listed above, State of Connecticut operations on the property include the following:

- State of Connecticut AREO Technical School
- ConnDOT Maintenance Building
- ConnDOT Managers Office and Fire/Safety Building
- ConnDOT Offices and Starbase Educational Center
- Connecticut State Police - Urban Search and Rescue (former CT National Guard Facility)

Prior to TRC's arrival at the Site to perform the Phase I ESA inspection, the airport manager provided each tenant with a copy of a checklist developed by TRC to aid in the understanding of the types of information that TRC personnel would be looking to acquire (either through an interview or through a file search / files provided by the tenant). A copy of this checklist and the letter that accompanied it is included as Appendix D. As possible during the site inspections, TRC personnel made an effort to talk with a representative from each tenant location/operation regarding their history at the Site and any information related to the environmental disposition of their leased space or the Site as a whole.

4.2.6.1 Airport Tenant Interview and File Search Results

Given the types and the amount of information obtained from the tenants, it is not conducive to summarizing all in this section. Rather, relevant information obtained from the tenants as identified above, either verbally or in the form of files provided to TRC for review, is contained in and referenced throughout this report.

4.2.7 Other Persons Knowledgeable of the Site

Throughout the course of completing the Phase I ESA, TRC personnel interfaced with people other than the airport manager and tenants who have knowledge of the Site. Specifically, TRC personnel interviewed or had conversations with Mr. Mark Lewandowski, current Brainard Airport Fire Chief who provided access to many of the structures at the Site and also provided access to the entire land parcel.

4.2.7.1 Results of Discussions with Other Persons Knowledgeable of the Site

Given the types and the amount of information obtained from the above-referenced people, it is not conducive to summarizing all in this section. Rather, relevant information obtained from these people is contained in and referenced as applicable throughout this report.

4.3 Historical Sources Review

Information regarding current and previous Site ownership and operator history was obtained primarily from the title information provided to TRC by ConnDOT, interviews, and from the historical sources (aerial photographs, city directories and historical topographic maps) discussed below. All of this information was synthesized to create the write-up of the history of the Site in Section 2.3.2.

In addition to utilizing the historical resources referenced above to further the understanding of the Site history, information obtained from these sources has been used to identify the uses or suspected uses and of adjoining properties and properties in the vicinity of the Site.

Additional information regarding the history of the Site, as well as adjacent and surrounding properties is summarized in the sections that follow.

4.3.1 Sanborn/Historical Maps

TRC reviewed historic Sanborn maps of Brainard Airport and the surrounding areas (Appendix D). A brief description of each map is given below:

Date of Map	Property Comments	Description of Adjoining Properties and Surrounding Areas
1950	Only the northern portion of the property along the southern side of Maxim Road is depicted on this map. A cluster of four buildings is depicted in the northern portion of the site. Furthest to the east is a two-story building comprised of a large hangar, an office area, an automobile garage and a service storage area. According to the information on the map, the occupant of the building is the USA 43rd Division Air Service. Immediately west of this building is a two-story building which, according to the map, is occupied by the Connecticut Department of Aeronautics. A gasoline tank is present to the north of this structure. A one-story Municipal Hangar is shown to the southeast of this building. A small one-story shop is shown immediately north of the Municipal Hangar. A gas tank is depicted to the north of the shop.	Most of the immediate surrounding areas are not depicted on this Sanborn map. The following buildings were located west of the present day property. Note that the present day airport is much smaller than its original size. About one quarter mile west of the intersection of Maxim Road and Reserve Road is the two-story Municipal Airport Administration building built in 1937. Immediately west of this building is a one-story fire station which houses one fire truck, one 150-gallon booster tank and one 150-gallon chemical tank. Immediately east are two one-story storage sheds. Immediately south of the intersection of Maxim Road and Reserve Road is the one-story Aviation Service Company hangar and attached office. This building is equipped with two gasoline tanks; one to the west and one southeast. Immediately east of this building is the one-story Descomb Flying Service hangar. It is equipped with one gasoline tank to the southeast.

Date of Map	Property Comments	Description of Adjoining Properties and Surrounding Areas
1979	The cluster of four buildings east of the intersection appears similar to that of the 1950 Sanborn map with the exception of the Municipal hangar. This building has been added onto expanding it slightly to the west.	Most of the immediate surrounding areas are not depicted on this Sanborn map. The area west of the intersection of Maxim Road and Reserve Road is not depicted on this map. The two buildings immediately south of the intersection have been removed. In this location are two one-story construction storage buildings, a one-story automobile garage and storage building, a one-story sheet metal works building with an attached office, and a large unmarked structure.

4.3.2 City Directories

TRC reviewed City Directories depicting the Site and surrounding area (Appendix E). A brief description of each City Directory is provided below:

1963 City Directory

- Brainard Field
- Dept. of Aeronautics
- 43D Division Aviation Company
- US Army Advisor 43d
- 43D Division Administration

1970 City Directory

- MAC-Brainard Aircraft Charter & Rental Service
- Brainard Airport Maintenance Garage
- Department of Transportation – Bureau of Aeronautics
- Connecticut National Guard – US Army Advisor 43D – Brigade 26th Infantry Division
- Connecticut National Guard – 43D Headquarters Yankee Division - 26th Infantry Division
- Connecticut National Guard – Company A / Air Mobile / 26th Aviation BN 43D Brigade
- Connecticut National Guard – Army Aviation Maintenance Shop

1990 City Directory

- Air One Inc.

- Air One Restaurant
- VIP Aeronautical Instruments
- VIP Avionics

2006 City Directory

- Brainard Airport Services, Inc. (20 Lindbergh Drive)
- Exxel Avionics (20 Lindbergh Drive)
- First Systems Corp. (20 Lindbergh Drive)
- Hertz (20 Lindbergh Drive)
- IES Inc. (20 Lindbergh Drive)
- Metro Flight Services, LLC (20 Lindbergh Drive)
- Total Aircraft Parts, Inc. (20 Lindbergh Drive)
- Wings Sports Bar & Grill (20 Lindbergh Drive)
- Szigeti Air Services, LLC (50 Lindbergh Drive)
- Professional Flight Training, Inc. (58 Lindbergh Drive)
- VIP Avionics, Inc. (58 Lindbergh Drive)
- Sutton James, Inc. (100 Lindbergh Drive)
- John A. Doyle (100 Lindbergh Drive)

Information contained in the City directory documented historic usage of specific portions of the airport property.

4.3.3 Aerial Photos

TRC reviewed aerial photographs of the Site and surrounding area (Appendix F). A brief description of each photograph is described below:

Date of Photograph	Scale	Property Comments	Description of Adjoining Properties and Surrounding Areas
1952	1"=250'	The airport property is visible in the photo. The airport property was much larger in 1952 than the current configuration. There are four separate runways visible in the photo. Two runways form a point that meet in the northeast corner of the property with one of the two running parallel to present day Maxim Road. The third runway meets at the northeastern point as well and runs between the two runways. The fourth runway intersects all three and is perpendicular to the third runway. Only the runway closest to the Connecticut River presently exists. The northernmost corner of the property there are planes and cars parked outside a cluster of buildings. There are three smaller buildings and one much larger building visible in the photo. The buildings observed in the photo currently still exist on the Site.	A major feature neighboring the Brainard Airport is the Connecticut River which is visible running along the eastern border of the property. The western area surrounding the airport is not visible in the 1952 photographs. Along the southern property border a few buildings are visible, which are still standing today. There is a set of buildings that are no longer there today as well. A set of two large buildings lie to what is now the right of Murphy Road and another large building with possible smaller buildings surrounding it which is to the left. These buildings were then located on the airport property in 1952, but presently are not within the property boundaries. Presently it is unclear if the same buildings occupy their space, but there are buildings present here today. Moving east there are two more buildings located right next to another with similar size and shape. Presently there are buildings at this same location, but it is unclear if they are the same as from 1952. Today they are located outside the property boundaries. There are a few buildings located at the northern bend of Maxim Road on either side of present day Murphy Road that appear in the 1952 photograph.
1957	1"=750'	In general, the site appears the same as in the 1952 photograph.	Much of the surrounding area present day used to be a part of the airport property which the 1957 aerial photograph shows much clearer than the 1952 photograph. The southern boundary of the property appears the same from the 1952 photograph. Present day State Route 15 appears in the 1957 photograph. Also at the northwestern boundary of the property on the west side of present Reserve Road, two long buildings appear that are currently present. To the east of Reserve Road a cluster of five circular structures (aboveground tanks) are

Date of Photograph	Scale	Property Comments	Description of Adjoining Properties and Surrounding Areas
			visible, which no longer exist. A single circular structure isolated from the five is still present. Along the western property boundary is a grid of connected streets. Present day this area must have been redeveloped because the same pattern of streets is no longer detected on present day aerial photographs.
1962	1"=500'	Changes on the airport property are visible. Parallel to the present day last remaining runway a secondary roadway was constructed. The road way is in close proximity to the runway, and it still is present today. To the east of the runway a newly constructed roadway is visible, which is present day Lindbergh Drive. Presently Lindbergh Drive demarcates the western property boundary of the site. New structures appear on the airport property in this photograph. A new building appears along present day Lindberg Drive. The building is long and narrow. Today it remains as the northern T-hangar building.	In general, the area surrounding the site appears the same as in 1957. On the eastern side of present day Brainard Road is a new building within the 1962 property boundary which is still visible today, but is located outside of the airport property boundary. The two buildings visible along Maxim Road appear to have the same size and shape as seen in the 1952 and 1957 photograph and appear in the photograph as they appear today.
1967	1"=750'	Major changes to the airport are visible. Perpendicular to the runway a new smaller runway is visible on the southern portion of the Site. Along Lindberg Drive newly constructed buildings are visible. Two long narrow buildings are visible next to the 1962 building. These are all present day T-hangars. North of the present day T-hangars, two buildings with a parking lot with planes parked outside are visible. These buildings are present today. The building slightly closer to Lindberg Drive is presently for F.B.O. offices and avionics shop. The other is presently the F.B.O. maintenance hangar.	Running parallel to present day Lindberg Drive another roadway is visible which is present day Murphy Road. Numerous new buildings are visible along Murphy Road. Extensive roadwork to the west of the property is visible in the photograph. Present day Interstate I-91 is now visible. The construction on the new roadway interchange is visible. In the top left hand corner of the photograph an area surrounding the airport is visible that has not been in past aerial photographs. The area appears very developed with a mix or large buildings and small.

Date of Photograph	Scale	Property Comments	Description of Adjoining Properties and Surrounding Areas
1977	1"=750'	In general, the site appears the same as in the 1967 photograph.	The area has visibly changed drastically in the photograph. The past runways have disappeared. The area enclosed by Maxim Road, Brainard Road, and Lindberg Drive is fully developed in the photograph. The area looks as it does presently. The buildings are same as those occupying their space today. The present day Hartford Water Pollution Control Facility is now visible in the photograph south of the property.
1985	1"=1000'	In general, the site appears the same as in the 1977 photograph.	The scope of the photograph is much larger, so more of the surrounding area is visible. It is clear the western boundary and across the Connecticut River to the northeast is very developed. Just south of the property and across the river to the south a large amount of densely forested land is visible.
1989	1"=750'	Two new buildings are visible in the northern portion of the property along Lindberg Drive. The smaller building is a present day F.B.O. office and restaurant, and the larger building is an F.B.O. hangar.	A new building is visible across Maxim Road in the northern portion of the property. This is a present day Connecticut Resource Recovery building.
1995	1"=833'	In general, the site appears the same as in the 1989 photograph.	In general, the area surrounding the site appears the same as in the 1989 photograph. The open space south of the property is visible the most it has been compared to all of the other photographs. There is a large inlet along the river just below the property.
1997	1"=833'	In general, the site appears the same as in the 1995 photograph.	The scope of the photograph contains a majority of the space surrounding the property on the eastern side of the Connecticut River, which the 1985 photograph also revealed.

4.3.4 Topographic Maps

TRC reviewed historical topographic maps of the Site and surrounding area (Appendix G). A brief description of each map is described below:

Date of Map	Scale	Property Comments	Description of Adjoining Properties and Surrounding Areas.
1893	1:62500	The subject property appears vacant and undeveloped. The historic topographic map implies that the site topography is relatively flat.	The Connecticut River is visible to the east of the site, beyond which is lightly developed area of East Hartford. Wethersfield Cove is shown to the south of the site. Immediately west are railroad tracks, beyond which is a series of roads, each with several small structures. To the north and northeast is the City of Harford.
1906	1:125000	The subject property appears similar to that of the 1893 historic topographic map. One small structure is present in the center of the site.	The areas to the south, east and west of the site appear similar to that of the 1893 historical topographic map. The City of Hartford to the north and northeast is heavily developed.
1944	1:31680	The airport is visible on this historical topographic map. The small structure that was present in the center of the property is no longer identified on the map. A total of four runways are visible at the airport in addition to several ramps and taxiways. Several structures are depicted in the northern portion of the airport. The use of these buildings is not identified on the map. The property appears to remain topographically flat.	To the west an expressway is present between the airport and the railroad tracks, beyond which wetlands exist. Maxim Road runs along the northern perimeter of the subject property and then becomes Brainard Road which runs along the western perimeter of the subject property. Several large structures are present in developments extending west from Brainard Road to the west of the subject property. The eastern surrounding area remains the same, however, a steep flood control dike is depicted before reaching the Connecticut river. To the north, several large structures are present. In this same area large round structures are present, which appear to be large holding tanks. A series of railroad tracks border the eastern portion of this area. Also immediately to the northeast of the site, a pond is present. Areas further west continue to be developed. A sewage disposal plant is identified immediately south of the subject property. Wetlands are present in this same area.

Date of Map	Scale	Property Comments	Description of Adjoining Properties and Surrounding Areas.
1952	1:31680	The subject property appears similar to that of the 1944 historical topographic map.	Several large buildings have been removed from the developed area along Brainard Road immediately west of the airport. An additional set of railroad tracks are present to the northwest of the subject property. An additional storage tank structure is present to the north of the site. The remaining surrounding areas appear similar to that of the 1944 historical topographic map.
1953	1:24000	The subject property appears similar to that of the 1952 historical topographic map.	The areas surrounding the subject property appear similar to that of the 1952 historical topographic map.
1964	1:24000	All of the runways and taxiways have been removed with the exception of the eastern most runway and taxiways. Five buildings are shown on the northern boundary of the Site and the outline of a T-Hangar is seen in the east-central portion of the Site.	Surrounding areas to the north, south and east appear similar to that of the 1953 historical topographic map. Several large structures are now present in what was previously the northwestern portion of the subject property. The development extending west from Brainard Road has been completely removed to make way for Interstate-91 and corresponding interchange. Three new structures are present east of Brainard Road. The wetlands that were once west of the western set of railroad tracks are no longer present. Roads are now present in this area as well as several large structures. A pond is present at the end of the runway to the south in the area of the sewage disposal plant where the wetlands previously existed.
1972	1:24000	A new small runway and corresponding taxiways are present in the southern portion of the property. The taxiways and ramps in the central and northeastern portion of the site have been redesigned to accommodate the new changes in the airport. A new road exists which identifies the western boundary of the subject property extending east from Brainard Road and then north to Maxim Road. Several large structures are present along this road.	Surrounding areas to the north and east appear similar to that of the 1964 historical topographic map. The railroad tracks immediately northwest of the subject property now extend further to the east. The area beyond the western set of railroad tracks continues to be developed. The Hartford Water Pollution Control Plant is visible to the south of the Site. The pond south of the eastern runway is no longer present. In this area, the sewage disposal area has been extended.

Date of Map	Scale	Property Comments	Description of Adjoining Properties and Surrounding Areas.
1976	1:24000	The subject property appears similar to that of the 1972 historical topographic map.	The areas surrounding the subject property appear similar to that of the 1972 historical topographic map.
1984	1:24000	The subject property appears similar to that of the 1976 historical topographic map.	Surrounding areas to the north and east appear similar to that of the 1976 historical topographic map. Immediately west of the subject property on the western side of Brainard Road, several large structures are present. Development of large structures continues west of the western set of railroad tracks. Three structures have been removed in the area to the southeast of the site.
1992	1:24000	Two new structures are present in the northwestern portion of the site. The remainder of the subject property appears similar to that of the 1984 historical topographic map.	Surrounding areas to the north, south and east appear similar to that of the 1984 historical topographic map. Some sections of railroad tracks have been removed immediately northwest of the subject property. An interchange further northeast of the subject property has been redesigned. Few structures have been added to the west of the western set of railroad tracks.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Mr. Brent Gilpin, Senior Project Manager, and Ms. Ashley Flyte, Environmental Scientist, with TRC conducted a Site reconnaissance of accessible areas on and around the Site on July 25th and July 30th, 2012 for the purpose of identifying RECs and AOCs. The TRC representatives were accompanied by Mr. Kurt Sendlein, Brainard Airport Manager and Mr. Mark Lewandowski, Brainard Airport Fire Chief who provided access to the property and answered questions during the reconnaissance. Photographs were taken during the reconnaissance effort and are included in Appendix I and a Site Plan Map has been included as Figure 2.

Several visual limitations were encountered during the reconnaissance efforts. Areas where floors or the ground surface were covered by objects (e.g., carpeting, furniture, warehoused materials and equipment); areas beneath parked vehicles; behind walls; above ceilings; and the roof(s) of on-site building(s)) were not inspected. In addition, the original or past disposition of floors that are routinely coated with epoxy coatings and/or paint could not be discerned.

5.2 Site Reconnaissance Observations

Presented below in sub-section 5.2.1 is a brief discussion of the Site setting and current use of each of the main buildings or other areas of interest, as specifically identified. This is followed by general observations made of the exteriors and interiors of the buildings or other key areas worthy of discussion. Note that more detailed information regarding elements of both the exterior and interior observations (e.g., presence of storage tanks, etc.) is included in the subsequent sections of this report. Photographs associated with the site reconnaissance have been included as Appendix H.

5.2.1 General Site Setting and Current Use(s) of the Site

The Brainard Airport is located off of Maxim Road in Hartford, Connecticut. It is currently comprised of 18 buildings, two (2) paved runways, one (1) turf runway, paved taxiways, paved ramp areas and aircraft tiedown areas.

As part of the physical site inspection process associated with this Phase I ESA, TRC designated a building lettering system (Building A, Building B, etc.) that corresponds to the Site Plan Map (Figure 2) to provide the reader/user of this document with a level of clarity and consistency. T-hangar buildings are identified by tenant space designations (example: T-Hangar 1-10). A list of buildings and a brief description of current uses associated with each building has been provided below:

Building A – 100 Lindbergh Drive

The approximate 13,000 square foot hangar building was reportedly constructed in 1980. The steel frame building was constructed with a concrete slab on grade foundation. The

eastern portion of the building currently and historically has function as an airplane hangar utilized for aircraft parking, maintenance and repairs. The hangar portion of the building is currently occupied by AETNA Insurance Company and is utilized as an airplane parking and maintenance facility for company-owned aircraft. Floor drains were observed in the central portion of the hangar area. The hangar portion of the building contained various small amounts of solvents, oils, lubricants and Jet A fuel. Several 55-gallon steel drums of virgin oil and a single 55-gallon steel drum of used oil (within a secondary containment vessel) were observed in the hangar area.

The building is reportedly heated with natural gas and a subsurface oil/water separator was observed in the asphalt driveway area on the northern side of the building.

The western portion of building A is utilized as office space by Sutton James, Inc. and Doyle, D'Amore & Balducci, LLC.

Building B – 58 Lindbergh Drive

The approximate 15,760 square foot hangar building was reportedly constructed in 1967. The steel frame building was constructed with a concrete slab on grade foundation. The northern portion of the building currently and historically has function as an airplane hangar utilized for aircraft parking, maintenance and repairs. The southern portion of the building is utilized as office space. The building is currently occupied by VIP Avionics, Inc. A large trench floor drain was observed in the central portion of the hangar area. The hangar portion of the building contained numerous small containers of solvents, oils, lubricants and Jet A fuel. Several 55-gallon steel drums of virgin oil, isopropyl alcohol, "sump" jet fuel and used oil (within a secondary containment vessel) were observed in the hangar area of the building.

A 250-gallon used oil AST was observed outside the northwest corner of the building. An oil/water separator was also observed outside the northwest portion of the building on the western side of the security fence / gate.

Building C – 50 Lindbergh

The approximate 11,320 square foot hangar building was reportedly constructed in 1967. The steel frame building was constructed with a concrete slab on grade foundation. The building is currently occupied by Atlantic Aviation, Inc. and is utilized for aircraft parking, maintenance and repairs. Floor drains were observed in the central portion of the hangar. The aircraft hangar building contained small containers of solvents, oils, lubricants and Jet A fuel. Several 55-gallon steel drums of used oil (sitting upon a secondary containment pallet) were observed in the hangar area of the building.

Building D – 20 Lindbergh Drive

The approximate 6,000 square foot building was reportedly constructed in 1984. The 2-story steel frame building was constructed with a concrete slab on grade foundation. The building is utilized as an executive terminal building by Atlantic Aviation, Inc. that includes office space, lounge area and a restaurant.

Building E – 20 Lindbergh Drive

The approximate 24,920 square foot hangar building was reportedly constructed in 1984. The steel frame building was constructed with a concrete slab on grade foundation. The building currently and historically has function as an airplane hangar utilized for aircraft parking, maintenance and repairs. The building is currently occupied by Atlantic Aviation, Total Aircraft Maintenance and Parts and Exxel Avionics. Floor drains were observed in the hangar portion of the building. The hangar portion of the building contained numerous containers of solvents, oils, lubricants, Jet A fuel, aircraft batteries, solvent-based parts washers and aviation fuel. Several 55-gallon steel drums of virgin oil, isopropyl alcohol, "sump" jet fuel, used oil (within a secondary containment vessel) and various buckets of petroleum based liquids were observed in the hangar area of the building.

Building F – 233 Maxim Road (Maintenance Garage)

The approximate 7,000 square foot building was reportedly constructed in 1922. The brick building was constructed with a concrete slab on grade foundation. The building currently and historically has function as a maintenance facility for the Brainard Airport facility since 1922. The building is currently occupied by ConnDOT for the storage, maintenance and repair of equipment utilized by the airport facility. Floor drains were observed in the building. The building was being utilized at the time of inspection for the storage and maintenance of heavy equipment and vehicles. TRC observed numerous containers of solvents, oils, lubricants, solvent-based parts washers and paint. Several 55-gallon steel drums of virgin oil and used oil (within secondary containment pallets) and various buckets of petroleum-based liquids were observed in the building. A small portion of the building was being utilized as office space by the airport maintenance crew.

Building G – 233 Maxim Road (Airport Manager Office and Fire/Rescue)

The approximate 2,700 square foot building was reportedly constructed in 1920. The brick building was constructed with a concrete slab on grade foundation. The building was historically utilized as an airport maintenance facility until approximately 2009 when the building was converted by ConnDOT into the current Airport Manager's office and the command center for the airport Fire / Rescue Division. The building is utilized as office space and equipment and supply storage associated with the airport Fire / Rescue Division activities. Floor drains were observed in the building.

Building H – 251 Maxim Road (Department of Aeronautics Building)

The approximate 5,000 square foot building was reportedly constructed in 1927. The brick building was constructed with a poured concrete basement. The building was historically utilized as the administration building for the Connecticut Department of Aeronautics. Currently the building is utilized by the US Department of Defense Starbase Educational Center and as additional office space utilized by the airport manager.

Building I – 269 Maxim Road (Connecticut State Police / Former CT National Guard Building)

The approximate 50,000 square foot existing building was reportedly constructed in 1945. An original complex of buildings was constructed in the footprint of the existing building in approximately 1929 and was historically utilized for similar purposes. The brick building was constructed with a concrete slab on grade foundation with a basement boiler room. The building historically has function as a Connecticut and Federal military aircraft maintenance, training and administration facility. The building is currently occupied by the Connecticut State Police and the Connecticut Urban Search and Rescue Team. The building contains a large hangar area in the center of the structure with office and storage rooms located to the east, west and north of the hangar portion. Large trench floor drains were observed in the hangar portion of the building. The building was being utilized at the time of inspection mainly for the storage of aircraft, vehicles, equipment and supplies utilized by and stored for emergency purposes by the agency's utilizing the building. TRC observed containers of oils, lubricants, and petroleum based fuels in the hangar portion of the building.

Vacant Building – East of 269 Maxim Road (Connecticut State Police / Former CT National Guard Building)

The approximate 400 square foot existing vacant brick building is located east of the Connecticut State Police / former CT National Guard building in a fenced area utilized for the storage of State of Connecticut emergency vehicles. It is currently unknown as to the exact construction date (estimated 1925-1945) of the building. The building was possibly used as a radio communications office and/or a supply yard office by the former military units historically operating in Building I.

Building - T-Hangar 1-10

The approximate 8,700 square foot building was reportedly constructed in 1960. The metal frame building constructed with a concrete slab on grade foundation. The building has historically and is currently utilized by various individuals for the storage of aircraft.

TRC visually assessed each of the T-hangars. In general, the majority of the T hangars were well maintained with few if any hazardous materials present. The typical T-hangar would contain an aircraft, a small cabinet with tow gear and possible some small consumer chemical products such as isopropyl alcohol, WD-40, and brake fluid. A minority of T hangars would also contain small (< 5 gallon) containers of aviation fuel and/or sump gas and/or oils. TRC noted the presence of small patches of discolored concrete in many of the hangars, indicative of small drips from the aircraft. The conditions noted above also apply to all of the T-hangar buildings listed below.

Building - T-Hangar 11-20

The approximate 9,920 square foot building was reportedly constructed in 1966. The metal frame building constructed with a concrete slab on grade foundation. The building has historically and is currently utilized by various individuals for the storage of aircraft.

Building - T-Hangar 21-30

The approximate 9,920 square foot building was reportedly constructed in 1966. The metal frame building constructed with a concrete slab on grade foundation. The building has historically and is currently utilized by various individuals for the storage of aircraft.

Building - T-Hangar 230

The approximate 20,000 square foot building was reportedly constructed in 2005. The metal frame building constructed with a concrete slab on grade foundation. The building has historically and is currently utilized by various individuals for the storage of aircraft.

Building - T-Hangar 240

The approximate 20,000 square foot building was reportedly constructed in 2005. The metal frame building constructed with a concrete slab on grade foundation. The building has historically and is currently utilized by various individuals for the storage of aircraft.

FAA Control Tower Building – Southern End of Lindbergh Road

The approximate 600 square foot building was estimated to have been constructed in 1990. The brick and metal frame raised building/structure was constructed with a concrete slab on grade foundation. The building is utilized by the Federal Aviation Administration as an air traffic control center. A propane fueled generator was observed on the south side of the structure.

State of Connecticut - Aero Technical School – 500 Lindbergh Road

The approximate 30,000 square foot building was reported to have been constructed in 2008. The concrete block building was constructed with a concrete slab on grade foundation. The building is utilized as the State of Connecticut Aero Technical School. The school offers technical degrees in aviation maintenance and repair. The facility is comprised of a large hangar area utilized for aircraft maintenance/repair technical instruction with the balance of the building being classrooms and instructor offices. Trench floor drains were observed in the hangar portion of the building. The hangar portion and various other mechanical training rooms of the building contained numerous containers of solvents, oils, lubricants, Jet A fuel, aircraft batteries, solvent-based parts washers and aviation fuel. Several 55-gallon steel drums of virgin oil, isopropyl alcohol, used oil (within a secondary containment vessel) and various buckets of petroleum-based liquids were observed in the hangar area of the building. A hazardous waste storage room and a painting booth were observed in the eastern interior portion of the building.

A small brick structure is located southeast of the main school facility that is utilized as an engine test cell. TRC did not have access to the test cell structure as the school was not in session during the summer months.

ConnDOT Salt / Sand /Urea Storage Building – Northeast Corner of Airport Property

The approximate 600 square foot building was estimated to have been constructed in 1970. The metal frame building was constructed with a concrete slab on grade

foundation. The building is utilized by ConnDOT for salt, sand and or urea storage during seasonal maintenance activities associated with the runways and taxiways at the Site.

5.2.2 Hazardous Substances and Petroleum Products

On the date(s) of the site inspection(s), containers of various sizes of hazardous substances and/or petroleum products were observed in the following places at the Site: Buildings A, B, C, E, F, I, T-Hangar 1-10, T-Hangar 11-20, T-Hangar 21-30, T-Hangar 230, T-Hangar 240 and the CT Aero Technical School facility. In general, given the overall nature of the operations at the Site, the majority of the chemicals used in limited quantities at the Site are stored in small containers within chemical storage lockers or in drums. Those that are used in larger quantities, typically petroleum products or de-icing fluids, are stored in 55-gallon drums or above-ground storage tanks (ASTs).

As indicated above, TRC observed that storage of small quantities of commercially available hazardous materials (one pint up to five gallon containers) are typically conducted in commercially purchased storage cabinets. The cabinets may be marked for storage of flammable materials, but may also be marked for storage of corrosives. Typical flammable cabinet contents observed during the site visits include small containers (one pint or smaller up to one gallon) of lubricants, oils, various paints, aerosol paint cans, lacquers, isopropyl alcohol, cleaners, degreasers, and miscellaneous solvents, thinners, and/or mineral spirits. In addition, TRC observed that many operators dedicate a single flammable cabinet for the storage of portable one to five gallon containers of various fuels such as gasoline, jet fuel and diesel fuel. Corrosive storage cabinets are typically less prevalent and may include such materials as alodine, acids, bleach, batteries, sodium hydroxide, metal surface preparation products, fixer, developer, and paint remover.

TRC's observations indicate the commercially purchased hazmat cabinets are typically of metal construction with an integral metal sump and door raised approximately two inches off the floor to contain minor spills or leaks. While TRC attempted to open each flammable cabinet or hazardous material storage locker, in many instances access was restricted due to locks (especially in T-Hangar units). However, any observations of visible chemical leakage, spills, or significant metal corrosion that would compromise the integrity of the cabinet are noted below and any impacts from the cabinets to the floor surface is also noted.

TRC also observed that the storage of chemicals in drums is common, particularly in hangars and larger maintenance areas. The drums observed range in size from approximately 15-gallons to the more common 55-gallon drums and are constructed of either plastic or metal. Drums of virgin materials were observed to be either directly placed on the floor of their respective storage locations or on plastic spill containment pallets to mitigate potential impact to the environment in the event of a release. Typical drum contents observed on the date of the site visit included: jet fuel, aviation gas, motor oil, lubricants, and most commonly used oil. Additional details regarding drum contents

and exceptions to this list of chemicals typically found in drums are provided below in the table.

During the Site visit, TRC observed it as common practice for aircraft maintenance facilities to maintain two ASTs or 55-gallon drums side by side; one marked for used oil and the second for aviation fuel (sump fuel). Facility personnel indicate the used oil is typically generated from routine engine maintenance in the hangars and the sump fuel tank is provided for pilots who drain a small amount of fuel from the aircraft prior to each flight to visually verify the absence of water and sediment in the fuel. The drained sump fuel is transferred to the aviation fuel or sump fuel tank or drum.

ASTs containing aviation fuel, jet fuel and used oil were observed on the date of the visit to the Site. According to Mr. Kurt Sendlein, and based on observations of concrete pads, vent and fill pipes and man-ways, unleaded gasoline and diesel fuel are also stored on-site in USTs. Detailed information regarding both current and historic storage tanks is located in Sections 5.2.10 and 5.2.11, however, for a more complete chemical storage inventory, some basic information is contained in the table below.

Other virgin chemical/petroleum storage was observed in belly tanks or day tanks associated with generators located adjacent to the southern side of the CT Aero Tech School building and foam suppression tanks (fire suppressant) located at an interior room location within the CT Aero Tech School.

The following table provides a brief summary of the locations where hazardous substances or petroleum products were observed on the date(s) of the Site visit, the containers in which the chemicals were stored and any observations regarding the integrity of the storage containers or indications of a potential release.

Location	Container Type (#)	Contents	Observations or Comments Regarding Container Integrity / Evidence of Spills or Leaks
Building A	55-gallon drums 30-gallon cubes Quarts	Used Oil, Glycol Jet A / Avgas Motor Oil	Secondary Containment Mobile Cart w/Pump Metal cabinet storage
Building B – Hangar Area (northern portion of building)	Parts washer 55-gallon Drums 30-gallon Aviation Fuel Cart (1-5) - Gallon Cans 250-gallon AST Aircraft Batteries	Petroleum Naptha Used Oil Aviation Fuel Numerous Containers of Solvents – Various Sizes Used Oil	Secondary Containment Secondary Containment Mobile Cart Stored Inside Flammable Cabinets Double-Walled Tank – Exterior location Workbench

Location	Container Type (#)	Contents	Observations or Comments Regarding Container Integrity / Evidence of Spills or Leaks
Building C	Parts washer 55-gallon drum storage Flammable locker 250-gallon AST	Petroleum Naphtha Used Oil, Lubrication Oil Paints, Fuel Used Oil	None Stored on Secondary Containment Pallets Stored inside flammable locker Secondary Containment
Building E	Parts washer 55-gallon Drums (1-5) - Gallon Cans Aircraft Batteries	Petroleum Naptha Used Oil / Avgas Numerous Containers of Solvents – Various Sizes	 Secondary Containment – Floor Staining Stored Inside Flammable Cabinets Workbench
Building F	Parts Washer 55-gallon drums Flammable locker 5-Gallon Buckets & 55-Gallon Drums	Petroleum Naptha Virgin Oil / Hydraulic Oil / Used oil, lubrication oil Paints, fuel, small containers of spray products, solvents, etc Paint	 Stored on secondary containment pallets Stored inside flammable locker Stored Inside Flammable Cabinets Runway Marking Paint
Building I	5-gallon cans Flammable lockers	Gasoline / Diesel Lubrication oil Paints, fuel, small containers of spray products, solvents, etc.	 Stored inside flammable locker(s)
CT Aero Tech School	Parts washer(s) Numerous 55-gallon Drums Hundreds of (1-5) - Gallon Cans Aircraft Batteries Pints/gallons/5-gallon buckets	Petroleum Naptha Used Oil Numerous Containers of Solvents – Various Sizes Paints & Thinners	Secondary Containment Secondary Containment Stored Inside Multiple Flammable Cabinets and Hazwaste Storage Room Workbench Paint Booth Area

Location	Container Type (#)	Contents	Observations or Comments Regarding Container Integrity / Evidence of Spills or Leaks
T-Hangars	Consumer Products Open or closed top 5-gallon containers of used oil or virgin lube oil Some flammable cabinets 1-5 gallon containers of aviation fuel Some (relatively few) 55-gallon drums	Numerous commercial products such as spray lubricants and oils	

As indicated above in the table, TRC personnel did not observe evidence of spills or uncontrolled releases from any of the storage areas observed during the Site reconnaissance that would likely have resulted in a discharge to soil, ground water or surface water at the Site. TRC did observe areas where small spills and/or drips over time had caused light to moderate staining of concrete floors. Site personnel were not aware of any significant spills or releases from these areas.

5.2.2.1 Unidentified Substance Containers

On the date of the Phase I ESA walk-over, no unidentified drums or containers were identified at the Site.

5.2.3 Hazardous and Non-Hazardous Waste

Hazardous materials used on-site include: commercial chemical products associated with basic aircraft maintenance such as lubrication oils, sprays, cleaners, solvents, alcohols and paints. In addition, facility operations result in the generation of used oils from engine maintenance and sump fuel from routine checks of fuel quality in aircraft. Lastly, many hangars employ parts washers which use a naphtha based solvent for parts cleaning. This material is reportedly removed and recycled by a contract vendor on a periodic basis and is not regulated as a waste material.

In general, waste materials generated from routine aircraft maintenance activities are regulated as non-hazardous wastes. No individual personnel reported the generation and disposal of regulated hazardous waste. TRC's review of the EDR report was consistent with these statements as none of the current tenants were identified in the EDR database as generating hazardous waste. A former tenant, Million Air, was listed as a RCRA Conditionally Exempt Small Quantity Generator.

TRC's observations of waste accumulation areas generally indicated acceptable management practices. Many of the locations where 55-gallon drums of hazardous materials were stored are located on spill containment pallets. However, TRC also

observed numerous instances throughout the airport facility where used oils are less well managed. This would include storage in an open-top 5-gallon pail and storage without secondary containment for liquid hazardous materials. At these individual areas TRC inspected the area for the presence of staining and/or leaking containers. Observation of staining is provided in Section 5.2.12. As noted, few observations of significant stains or leaks were observed in areas of liquid hazardous material storage.

5.2.4 Solid Waste

Solid waste (municipal solid waste or MSW) generated at the Site is collected in 6-yard covered steel dumpsters at various locations throughout the property (northeast of Building B, northeast of building D and north of Building E adjacent to AST fuel farm). A 16-cubic yard roll-off dumpster was also observed in the paved parking lot on the eastern side of Building I. A brief inspection of the ground surface near the dumpsters did not reveal any drips or staining on the date of the visit. According to facility personnel questioned during the site visit, municipal solid waste is removed from the dumpsters on a contract basis.

5.2.5 Wastewater

5.2.5.1 Wastewater Sources

The only wastewater source generated at the airport facility is sanitary wastewater. All sanitary wastewater is ultimately discharged to the municipal sewer system via a pump station located on the eastern side of Lindberg Road in the northwestern portion of the Site or via direct connection to the municipal sewer line located along Maxim Road.

5.2.5.2 Wastewater Drainage Features (Drains, Sumps and Separators)

A total of five (5) oil/water separators were identified at the Site. The separators were located on the southern side of the Aero Tech School building, outside the northwest corner of Building B, at an interior location (southwest corner) of Building E, along the northern side of Building G and immediately north of the historic vehicular wash rack on the eastern side of Building I. The locations of the oil/water separators identified as part of this investigation have been included on Figure 2.

5.2.6 Stormwater

A stormwater drainage system exists on-site to collect surface runoff from building roofs and the various exterior impervious surfaces (e.g., paved parking areas, concrete aprons, etc.). The stormwater system consists of a network of stormwater catch basins located throughout the airport property that discharge via subsurface piping to at least four (4) discharge points. Two of the reported discharge points are towards the Connecticut River (southeast corner and northeast corner of Site), one discharge point is reported to connect to the municipal stormwater sewer system located to the southwest of the airport property and the final discharge point is to the municipal storm sewer line existing beneath Maxim Road in the northwest corner of the Site.

Stormwater discharges from the Site are monitored and are reported to the CTDEEP under a Stormwater Pollution Prevention and Monitoring Plan and permit that is implemented by ConnDOT.

TRC personnel did not observe staining or sheens in the on-site stormwater catch basins, nor were any odors noted on the date of the site inspection. However, spill reports were identified in CTDEEP files that identify releases of hazardous materials (petroleum hydrocarbons) to the Site's stormwater collection system.

It is also expected that current or historic de-icing activities, including the use of glycol products, has occurred at the facility. The stormwater collection basins and subsequent outfalls exhibiting direct discharge (Connecticut River bank) may have been impacted by both the historic spills of petroleum hydrocarbons and/or the de-icing activities at the Site.

5.2.7 Surface Water Bodies

No surface water bodies were identified on the Subject Property. The Connecticut River borders the Site along its eastern boundary.

5.2.8 USTs

TRC reviewed numerous UST related documents from a variety of sources that included historic reports provided by ConnDOT, Hartford Fire Department files, CTDEEP files, maps and figures obtained from airport manager and historic aerial photographs obtained from the airport manager and/or airport tenant offices in an attempt to document and identify historic USTs at the Site. Based on a review of information gathered by TRC as part of this investigation, historically there were at least forty-seven (47) USTs used on-site for the storage of virgin petroleum products and/or used oil (see Figures 2-1 and Figure 2-2). It is possible that other USTs exist or existed on the Site with no available documentation to identify their location or disposition.

Currently, there are two (2) USTs located at the Site, as confirmed by Mr. Kurt Sendlein of ConnDOT or by observations of evidence of the presence of tanks (e.g., vent pipes, fill pipes, man-ways, fuel dispensers) made by TRC personnel during the Phase I ESA site visit. In addition, tank registration information was identified during the records review at CTDEEP.

An inventory of historic and current USTs identified as part of this investigation is provided in the table below.

Tank Identification	Location/Use	Volume (Gallons)	Contents	Construction, Condition, Comments	Information Source
Historic USTs:					
9013 A1	Building I – central portion of eastern	5,000	Heating Oil	-Installed 1955 -Removed as of 1999	TRC 2012 DTC 2011

Tank Identification	Location/Use	Volume (Gallons)	Contents	Construction, Condition, Comments	Information Source
	parking lot / driveway			Master Plan -Removed December 1989 -Steel, Unlined -Pavement cut out is visible -Failed Tightness Test Oct. 26, 1988 – Leaking UST	UST Notification Form May 20, 1988 Map 1990 DTB 1994 Master Plan 1999 Storch 1997
9014 A1R1	Building I – central portion of eastern parking lot / driveway	5,000	Heating Oil	-Installed December 1989 -Removed September 1998 -Steel Lined Believed to have been installed in previous UST tank grave	UST Notification Form February 4, 1999
C2	Building I – eastern vehicle storage lot (southeast corner of lot)	1,000	Diesel	-Installed June 1974 -Removed December 1989 -Steel, Unlined Reportedly replaced with 3,000-gallon UST	UST Notification Form June 2, 1995 UST Notification Form (Corrected)
9013 C2R1	Building I – eastern vehicle storage lot (southeast corner)	3,000	Diesel	-Installed December 1989 -Removed September 1998 -Steel, Unlined	DTC 2011 UST Notification Form February 4, 1999 Map 1990 DTB 1994 SWPPP 1995 Master Plan 1999
A-1	Building I – eastern vehicle storage lot (southeast corner)	2,500	Unleaded Gasoline	-Installed June 1974 -Removed -Possibly was replaced with tank B1	UST Notification Forms
9013 B1	Building I – eastern vehicle storage lot (southeast corner)	2,000	Unleaded Gasoline	-Installed January 1985 -Removed September 1998 -Steel, Unlined	DTC 2011 UST Notification Form February 4, 1999 Map 1990 DTB 1994 SWPPP 1995 Master Plan 1999

Tank Identification	Location/Use	Volume (Gallons)	Contents	Construction, Condition, Comments	Information Source
D-1	Building I – outside southeast corner of building	1,500	JP-4 Jet Fuel	-Installation estimated 1955 -Removed December 2, 1993 -Steel, Unlined -Leaking UST -59 Tons of contaminated soil removed	CT Military Department 1993
	Building I – eastern vehicle storage lot (northwest corner in area of current vehicle wash rack)	500	Used Oil	Unknown installation or removal date	HFD Fire Dept. files
	Building I – South of central hangar portion of the building	Unknown	Unknown	1990s	Information provided by Mr. John Nogas – ConnDOT
9567 A-1	"Parcel F" – Southwest of Building F / North of Building E	10,000	AVGAS	-Installed 1973 -Removed 1989	Storch 1997 CTDEEP
	Building E - Northern and/or Northwestern Side of Building	(6) 6,000	Jet A	-All USTs reportedly removed as of 1999 - Former Fuel Farm with 36,000-gallon total capacity	Map 1990 SWPPP 1995 Master Plan 1999
	Building B – East of Hangar - Central Portion of Eastern Ramp Area	10,000	unknown	Unknown	TRC 2012 Hayle, Tanner & Associates 1985
	Building B – East of Hangar - Central Portion of Eastern Ramp Area	12,000	Unknown	Unknown	TRC 2012 Hayle, Tanner & Associates 1985
	Building B – unknown Location	(4)10,000	Unknown	Installed 1967 – 40,000-gallon total capacity – Possibly removed 1990 – Listed as "Leaking"	TRC 2012 HFD Fire Storch 1997
	Building B or C – Unknown Location	2,000	gasoline	Existing 1968	TRC 2012 HFD Fire Dept.
A	Building B or C – Unknown Location	1,000	Used Oil	Existing 1968	TRC 2012 HFD Fire Dept.
B	Building B or C Unknown Location	1,000	Used Oil	Existing 1968	TRC 2012 HFD Fire Dept.

Tank Identification	Location/Use	Volume (Gallons)	Contents	Construction, Condition, Comments	Information Source
	Building B or C – Unknown Location	3,000	Converted to Auto Gasoline	Existing 1968	TRC 2012 HFD Fire Dept.
	Building B or C – Limited Location Information - Northern Side of Hangar building (A, B or C) -possibly eastern side of hangar based on building shape and taxiway location on sketch	8,000	Aviation Fuel	Existing 1984	TRC 2012 Tank Tightness Test Results 1984
	Building B or C – Limited Location Information - Northern Side of Hangar building (A, B or C) -possibly eastern side of hangar based on building shape and taxiway location on sketch	4,000	Unknown	Existing 1984	TRC 2012 Tank Tightness Test Results 1984
	Building B - Southern Portion of Eastern Ramp Area	(3) 4,000	Aviation Fuel	Unknown Installation Date – Existing 1989 12,000-gallon total capacity - Possibly removed 1990 - Listed as “leaking”	CT Dept. of Public Works Map 1970 - Davis & Howes 1970 IT Corp 1989 ConnDOT 1989 Storch 1997
	Building B - Northern Portion of Eastern Ramp Area	(3) 4,000	Aviation Fuel	Unknown Installation Date – Existing 1989 – 12,000-gallon total capacity – Possibly removed 1990 - Listed as “Leaking”	CT Dept. of Public Works Map 1970 - Davis & Howes 1970 IT Corp 1989 ConnDOT 1989 Storch 1997
	Building F – Southeast of Building	(2)10,000	Jet A	Unknown Installation Date – Existing 1989 – 20,000-gallon total capacity	CT Dept. of Public Works Map 1970 - Davis & Howes 1970 IT Corp 1989 ConnDOT 1989

Tank Identification	Location/Use	Volume (Gallons)	Contents	Construction, Condition, Comments	Information Source
	Building F – Southwest of Building	(2)10,000	Aviation Fuel	Unknown Installation Date – Existing 1989 – 20,000-gallon total capacity	IT 1989 ConnDOT 1989
8620-4 W-1	Building F- Southeastern corner of building	250	Used oil	-Installed 1965	TRC 2012 EDR 2012 Storch Associates 1997 UST Registration
	Building F – Southwest corner of former airport office (portion of building currently non-existent/ demolished)	unknown	Possibly Fuel oil	unknown	Information provided by Mr. John Nogas – ConnDOT and shown on Hayle, Tanner & Associates Figure 1 – 1985 (Airport Master Plan)
8620-1 D-1	Building F – Southwest Corner of Maintenance Building	2,000	Diesel	-Installed 1965 -Removed August 1988 (EDR) -Interview with an employee stated a tank's general location and removal -A map in the Storch report confirmed the tanks location, volume, and contents	TRC 2012 EDR 2012 Storch Associates 1997
8620-# R-1	Northwest of Building G (North side of Building F)	2,000	Unleaded Gasoline	-Installed 1977 -Removed August 1988 (EDR) -A map and UST Notification from in Storch report documented the tank	Storch 1977 EDR 2012
F-1	Building G – North side of building	2,000	Heating Oil	-Installed 1960	Storch Associates 1997
	Building H – North of Building	550	Gasoline	Installed 1929	TRC 2012 HFD Fire Marshal Files
	Building H – North of Building	2000	Gasoline	Installed 1945	TRC 2012 HFD Fire Marshal Files

Tank Identification	Location/Use	Volume (Gallons)	Contents	Construction, Condition, Comments	Information Source
Current USTs:					
8620-5 U-1	Building G – Southwest of Building (North of Building F)	4,000	Unleaded Gasoline	-Installed August 1988 -Passed Tightness Test 1997 -Vehicle fueling pump island associated with tanks	TRC 2012 EDR 2012 DTC 2011 UST Facility Notification form April, 1998
8620-6 D-2	Building G – Southwest of Building (North of Building F)	4,000	Diesel	-Installed August 1988 -Passed Tightness Test 1997 -Vehicle fueling pump island associated with tanks	TRC 2012 EDR 2012 DTC 2011 UST Facility Notification form April, 1998

TRC reviewed numerous UST related documents from a variety of sources in an attempt to document and identify historic USTs and their former location at the Site. Of the 47 USTs identified associated with the Site, only two (2) (associated with Building I – former Connecticut National Guard) had any documentation regarding removal and both of those were reported to be leaking and had impacted soils. Two USTs currently exist on the Site. Based on information obtained as part of this investigation, it appears that numerous USTs were historically utilized at the Site that were not registered with the CTDEEP, ConnDOT or the Hartford Fire Department. In addition, documentation of known tanks was often found to be non-specific as to location on the Site and merely listed "Brainard Airport" as the location of the tanks or listed the tanks associated with a former tenant that utilized several buildings at the time. Presumed UST locations were identified based on a review of historic figures/sketches, historic aerial photographs and information provided by ConnDOT employees. The presumed approximate locations of all USTs associated with the Site have been provided on Figure 2-1 and Figure 2-2.

During the site inspection process, Mr. Mark Lewandowski (Airport Fire Chief) identified the reported location of a major regional jet fuel pipeline valve on the eastern portion of the Site. According to Mr. Lewandowski, the subsurface pipeline enters the airport property from the south along the Connecticut River and then exits the airport property towards the north and the valve is inspected by a pipeline employee on a regular basis. No other information was identified associated with this reported pipeline as part of this investigation.

5.2.9 ASTs

According to documents associated with the Site and reviewed by TRC, historically only two (2) ASTs (other than existing ASTs) were documented to have been used at the Site for the storage of used oil. Both tanks were reportedly located east of Building I in the eastern vehicle storage area (see Figures 2-1).

Currently, there are six (6) ASTs located at the Site, as confirmed by TRC personnel during the site visit.

The following table summarizes the ASTs historically located at the Site, as well as the ASTs observed on-site during the July 2012 site inspection:

Location/Use	Volume (Gallons)	Contents	Construction, Condition, Comments	Information Source
Historic ASTs:				
Building I – southeastern corner of paved eastern parking lot/driveway	275 (estimated)	Used Oil	-Evidence on asphalt where tank was located as parking lot had apparently been resurfaced around tank	TRC 2012 DTC 2011
Building I – southeastern corner of paved eastern parking lot / driveway	Unknown	Used Oil	Formerly located on concrete pad immediately west of current vehicle wash rack (adjacent to historical hazardous waste storage container)	TRC 2012
Current ASTs.:				
Fuel Farm – Located northwest of Building E and southwest of Building F	12,000	AVGAS	-Steel -Secondary containment concrete vault	TRC 2012 SWPPP 1995
Fuel Farm – Located northwest of Building E and southwest of Building F	12,000	Jet A	-Steel -Secondary containment concrete vault	TRC 2012 SWPPP 1995
Fuel Farm – Located northwest of Building E and southwest of Building F	275	AVGAS	-Steel -Secondary containment -Boxed Shape -Fairly Rusty -Sumped Fuel Storage	TRC 2012
Fuel Farm – Located northwest of Building E and southwest of Building F	275	AVGAS	-Steel -Secondary containment -Cylinder Shaped -Fairly Rusty -Sumped fuel storage	TRC 2012
Building B – northwest exterior location	275	Used Oil	-Steel -Boxed Shaped -Stored Outside -Some rusting -Minor staining on pavement	TRC 2012
Building C – Interior Location	275	Used Oil	-Steel -Secondary Containment -Stored in hangar	TRC 2012

5.2.10 Equipment Likely to Contain PCBs

PCB-containing dielectric fluids and hydraulic oils have been widely used historically as coolants and lubricants in transformers, capacitors, other electrical equipment, and hydraulically powered devices due to their insulating and nonflammable properties. The use, manufacture, and disposal of PCBs are regulated by the Toxic Substances Control Act (TSCA), 40 CFR, Part 761. The production of PCBs in the United States began circa 1929 and ended in 1977.

During site visits TRC noted the location of dielectric fluid filled electrical transformers. In general, dielectric-fluid filled transformers were observed at exterior locations near buildings and hangars. The transformers were typically painted a universal green color. Where notation of PCB content was listed by labels or signage, these are noted in the table below. TRC did not access any transformer cabinets to assess potential subsurface impacts below the transformer for those transformers fitted with subgrade vaults. However, if dielectric fluid leakage or staining was noted (gauges, bolts, etc.), these observations are provided below. In addition, any observations of older canister-type transformers, oil staining, or evidence of historic transformer use or storage is noted below.

Location	Number of dielectric transformers	Observations of oil staining, PCB signage, or other notable observations
Various throughout Site	Typically one per location	None noted

PCBs in the hydraulic oil cannot be determined without testing. No hydraulic equipment observed at the Site on the date of TRC's visit with the exception of hydraulic heavy equipment attachments associated with airport maintenance that was located in the Building F (ConnDOT Maintenance building). Drums of hydraulic oil were observed along the eastern interior wall of the building most utilizing small hand pumps for dispensing the virgin product. The drums were situated atop secondary containment pallets. Note that TRC has no information regarding any prior equipment (hydraulic lifts) that may have been removed from the Site over the course of its operating history.

Fluorescent lighting fixtures were observed throughout the building(s) at the Site. Congress banned the manufacture of PCBs in the United States in 1977 because of their toxic effects. In 1979, the EPA banned the processing or use of PCBs, except in totally enclosed equipment. However, a large number of fluorescent light ballasts that were installed prior to these bans may contain PCBs. Based on the age of the building located at the Site, it is possible that PCB-containing light ballasts exist at the Site.

5.2.11 Pits, Pools of Suspect Liquid, Lagoons, and Dry Wells

No pits, pools of suspect liquid, lagoons, or drywells were observed during the Site reconnaissance.

5.2.12 Stains or Corrosion

Minor to moderate oil staining was observed in on-site Buildings A, B, C, E, F, and I during the site inspection. In addition, the CT Aero Tech School hangar and shop portion

of the building also exhibited minor floor staining associated with petroleum usage and painting operations.

Given the continuous use of the airport hangars for aircraft repair and maintenance for approximately 50 years and the ConnDOT facility maintenance garage for approximately 90 years, the moderate amount of concrete staining observed during the site inspection would be expected.

Some degree of light concrete oil staining was also observed in all of the individual T-Hangar units. It is assumed that the small stained areas observed in these buildings are due to small leaks of oil and/or aviation fuel from airplanes parked in the buildings.

5.2.13 Solid Waste Dumping/Landfills

No visual evidence of solid waste dumping or landfills was observed during the Site reconnaissance.

5.2.14 Stained Soil/Stressed Vegetation

No significant stained soil was observed during the subject area reconnaissance.

5.2.15 Wells

During TRC's July 2012 Site visit, one (1) groundwater monitoring well was observed in the asphalt driveway on the eastern side of Building I. Based on the proximity of the well to the former leaking 5,000-gallon fuel oil tank that formerly existed in this area of the Site, it is assumed that the monitoring well was installed following the removal of the leaking tank to test groundwater quality in the presumed down-gradient groundwater flow direction. No reports were identified as part of this investigation with regards to any laboratory testing of water samples from the well.

5.2.16 Odors

No strong, noxious, or pungent odors were noted by TRC during the Site reconnaissance.

5.2.17 Building Materials

Although out-of-scope of an ASTM or SCGD Phase I ESA, at the request of the Client, TRC has included in this report information which was readily ascertainable and practically reviewable regarding the presence or potential presence of asbestos and lead-based paint. Note that this scope of work did *not* include sampling of any building materials.

5.2.17.1 Potential Asbestos Containing Material (ACM) and Lead-Based Paint

The use of asbestos was severely restricted in the late 1970s. Buildings constructed no later than 1980 are presumed, under the OSHA Asbestos General Industry Standard (29 CFR 1910.1001), to contain asbestos containing materials (ACM). Installed thermal system insulation and surfacing materials (sprayed-on, troweled-on, or otherwise

applied), found in buildings constructed prior to 1980 must be presumed to be asbestos-containing materials (PACM) unless rebutted by sampling. Examples of surfacing materials include decorative finishes on ceilings and walls, fireproofing on structural members, and acoustical plasters. Although not defined strictly as "PACM", the OSHA Construction Asbestos Standard (29 CFR 1926.1101), which is applicable to repair and maintenance activities as well as construction, also requires that asphalt and vinyl flooring material installed no later than 1980 be assumed to be asbestos-containing until the building owner proves the flooring is not ACM [29 CFR 1926.1101(g)(8)(i)(I)]. This includes not only the flooring material, but associated mastics and backings.

The term "suspect ACM" does not appear in the OSHA standards. The term, however, has long been used by the asbestos industry to refer to any building material that is suspected of being asbestos-containing (based on appearance, usage, age of building, etc.), but has not been proven conclusively to be ACM (based on sampling and analysis, documentation, building records, etc). For OSHA's purposes, suspect material would include any material (including TSI, surfacing, and flooring) that a building owner suspects of containing asbestos and is found in a building constructed after 1980, or any material (excepting TSI, surfacing, and flooring) found in a building constructed prior to 1981. Typical suspect building materials would include ceiling tiles, asbestos-cement products (Transite®), and joint compound. The exercise of due diligence (as noted in the OSHA asbestos standards) requires that, where a building owner knows or should have known that materials other than PACM are asbestos-containing, these materials must be treated as ACM until proven otherwise.

As many of the structures at the Brainard Airport facility were constructed prior to 1980, materials that meet the definition of PACM (e.g., thermal system insulation and surfacing materials) must be presumed to be PACM unless rebutted by sampling. Asphalt and vinyl flooring should also be considered and treated as PACM and ceiling tiles, sheet rock and joint compound should be considered as suspect materials.

Degraded (friable) steam pipe wrap was observed in the basement boiler room of Building I.

Structures built before 1978 may contain lead-based paint (LBP). Lead from paint, chips and dust can pose health hazards if not managed properly. Lead exposure is especially harmful to young children and pregnant women. Lead-based paint is defined as paint, varnish, shellac or other coating on surfaces that contain 1.0 mg/cm2 or more of lead or 0.5 % or more of lead by weight. For purposes of this assessment TRC's evaluation is limited to an assessment of the age of each structure. If the building or structure was constructed before 1978, the presence of lead-based paint is possible. If the building or structure was constructed post 1978, a determinative statement cannot be made regarding the presence or absence of LBP. A summary of structures and approximate dates of construction is provided in Section 2.3.1.

Reports documenting known asbestos and lead related activities associated with the Brainard Airport property have been listed below:

Versar Risk Management, Inc. December, 1986. ***Asbestos Inspection Report for Brainard Airport Administration, Hartford, Connecticut.***

An investigative survey for ACM was conducted by Versar Risk Management, Inc. on behalf of the Bureau of Public Works at the Brainard Airport Administration Building at the Brainard Airport in Hartford, Connecticut. The subject property included the 5,500 square foot, three-story building which had been renovated recently according to Versar's December, 1986 report.

On October 21, 1986, a Versar representative conducted an inspection and sampling of suspect ACM of the subject property. During the building inspection, a small amount of "air cell" pipe insulation was found in the basement, apparently leftover from the aforementioned renovations. Sample analysis showed that the insulation contained 40-45% asbestos. No other ACM was identified by the survey.

TRC Environmental Corporation, October 1995. ***Investigative Survey for Asbestos Containing Materials and Lead Based Paint, Various Connecticut Airports, ADA Renovations. Various Connecticut Airports.***

An investigative survey for ACM and LBP was conducted by TRC on behalf of ConnDOT at Danielson/Killingly Airport (Killingly, Connecticut), Brainard Airport (Hartford, Connecticut), Waterbury/Oxford Airport (Oxford, Connecticut) and Windham Airport (Windham, Connecticut) . All of the airport facilities are currently operational and fully occupied. The purpose of the investigative survey was to identify ACM and LBP which could potentially be impacted during future renovations of the airports by ConnDOT in order to meet accessibility requirements mandated by the Americans with Disabilities Act (ADA).

TRC's investigative survey and bulk sample analysis identified approximately 825 square feet (SF) of ACM floor tile and associated mastic in the third-floor offices, closets and lavatories in Watebury/Oxford Airport and approximately 360 SF of sheetrock with ACM joint compound in the office area and lobby of Windham Airport. XRF analysis of dry painted surfaces in the proposed renovation areas identified lead in toxic concentrations on the conference room door jam surface in the Waterbury/Oxford Airport.

EnviroMed Services, Inc. October, 2001. ***Asbestos Inspection Report for Department of Transportation, Brainard Airport Maintenance Garage, Brainard Road, Hartford, Connecticut.***

An investigative survey for ACM was conducted by EnviroMed Services, Inc. on behalf of ConnDOT at the Brainard Airport Maintenance Garage in Hartford, CT. According to EnviroMed's October, 2001 report, the purpose of the inspection was to identify the presence of ACM in or on the subject property so that any ACM could be removed prior to periodic maintenance or renovation.

On October 10 and 11, 2001 an EnviroMed representative conducted an inspection and sampling of suspect ACM within the interior and exterior portions of the subject property. All ACM was sampled and analyzed according to the appropriate protocol.

Analysis of the sixty-seven (67) samples collected at the Maintenance Garage established that ACM was present at quantities greater than 1% in roof flashing cement and flashing paper on the top parapet walls of the building.

EnviroMed Services, Inc. October, 2001. ***Lead Inspection Report for Department of Transportation Building #85-003, Brainard Airport Garage, Hartford, CT.***

On October 10, 2001 EnviroMed Services, Inc. performed a lead inspection for ConnDOT at the Brainard Airport Garage located in Hartford, CT to identify the presence of lead on components prior to renovation/demolition. Toxic levels of lead were found using X-Ray Fluorescence Analysis on building components in the garage.

EnviroMed Services, Inc. October, 2001. ***Asbestos Inspection Report for Department of Transportation, Brainard Fire hanger Building # 85-002 & Crash Unit Building # 85-004, Brainard Road, Hartford, Connecticut.***

An investigative survey for ACM was conducted by EnviroMed Services, Inc. on behalf of ConnDOT at the Brainard Airport Fire Hanger Building and Crash Unit Building in Hartford, CT. According to EnviroMed's October, 2001 report, the purpose of the inspection was to identify the presence of ACM in or on the subject property so that any ACM could be removed prior to periodic maintenance or renovation.

On October 10 and 11, 2001 an EnviroMed representative conducted an inspection and sampling of suspect ACM within the interior and exterior portions of the subject property. All ACM was sampled and analyzed according to the appropriate protocols. Analysis of the forty-eight (48) samples collected at the Fire Hanger Building established that ACM was present at quantities greater than 1% in the following: floor tiles and mastic, transite ceiling panels, and exterior window frame sealer. Analysis of the sixty-four (64) samples collected at the Fire Hanger Building established that ACM was present at quantities greater than 1% in the following: floor tiles and mastic, flashing cement along roof interfaces, and roll roofing adhesive.

EnviroMed Services, Inc. October, 2001. ***Lead Inspection Report for Department of Transportation Buildings #85-002 & #85-004, Brainard Fire Hangar and Crash Unit, Hartford, CT.***

On October 11, 2001 EnviroMed Services, Inc. performed a lead inspection for ConnDOT at the Brainard Fire Hangar and Crash Unit located in Hartford, CT to identify the presence of lead on components prior to renovation/demolition. Toxic levels of lead were found using X-Ray Fluorescence Analysis on building components in both buildings.

TRC Environmental Corporation, July 2011. ***Compliance Report for the Abatement of Asbestos Containing Materials and Activity Impacting Lead Based Paint, Brainard Airport, Building 85-004, Hartford, CT.***

An investigative survey for ACM and LBP was conducted by TRC on behalf of ConnDOT at Brainard Airport Building 85-004 in Hartford, Connecticut. Building 85-004 was a vacant, one-story, metal-framed concrete office building attached to a larger

adjacent building which was not included in the scope of abatement activities. As noted in TRC's July 2011 report, asbestos abatement was necessitated as the building structures were scheduled for future demolition.

From April 4 through April 8, 2011, approximately 50 SF of ACM floor tile/mastic in the kitchen, approximately 240 SF of ACM cove base glue in the lounge and Rooms #3 and #4, approximately two (2) windows with ACM caulk in the women's and men's bathrooms, approximately 80 SF of ACM exterior roll-on roofing on the entrance roof, approximately one (1) window with ACM interior/exterior glazing in the kitchen, approximately two (2) doors with ACM exterior caulk in Bedrooms #1 and #2 and approximately 50 SF of ACM exterior flashing tar on the roof was removed from the structure. In total, approximately 3.08 cubic yards of asbestos waste was removed from Building 85-004. All asbestos waste was removed in accordance with the appropriate protocols and was disposed of at Modern Landfill in York, Pennsylvania. This abatement work was conducted by a subcontractor in accordance with the appropriate protocols.

Following the abatement work, a licensed TRC Asbestos Project Monitor conducted visual inspections of the interior and the exterior work areas in which abatement was conducted. Interior work areas received satisfactory visual inspections and acceptable reoccupancy clearance criteria air sample results on April 6, 2011. Exterior work areas received satisfactory visual inspections on April 8, 2011 and were deregulated.

TRC Environmental Corporation, November 2011. ***Demolition Report for Household Hazardous Waste Removal and Demolition of Brainard Airport, Building 85-004, Hartford, CT.***

As noted in TRC's November 2011 report, demolition activities at Brainard Airport Building 85-004 in Hartford, CT were monitored by TRC on behalf of ConnDOT. Building 85-004 was a vacant, one-story, metal-framed concrete office building attached to a larger adjacent building which was left intact during demolition activities.

Building demolition, related waste removal/disposal, utility/service abandonments and site regarding occurred from June 29 through July 19, 2011. All demolition work was conducted by a subcontractor in accordance with appropriate protocols. ACM were removed prior to the commencement of demolition work and the water line servicing the building was re-routed away from the area of demolition by a subcontractor. Although TRC determined that there was lead-based paint present on the building structures, the structure was determined not to be hazardous waste by the appropriate protocols, and so a subcontractor removed the debris for disposal as general construction and demolition debris. The building waste was then transported to Murphy Road Recycling in Hartford, CT and City Carting and Recycling in Milford, CT for disposal. Scrap metal was segregated and recycled at Metal Management in North Haven, Connecticut. Concrete block was segregated and recycled at Manchester Recycling in Manchester, CT.

There was no fuel oil tank (AST/UST) identified at the site as the building was heated/cooled via gas-powered HVAC units. The sewer line was properly disconnected and capped off by a subcontractor.

During demolition activities, accidental damage occurred to a storm drain/catch basin at the rear of the structure and the roof of the adjacent building. These damages were repaired by subcontractors on July 18 and July 19, 2011, respectively.

Certain household hazardous waste items were identified by TRC and subcontractors, and were gathered, inventoried, packed labeled, manifested and removed for disposal/recycling to Radiation Safety Associates of Hebron, CT, Northeast Lamp Recycling of East Windsor, CT, EQ Detroit, Inc. of Detroit, MI, Climatech Mechanical Services of Wallingford, CT and Clean Harbors El Dorado LLC of El Dorado, AR according to the appropriate protocols. These additional waste items included:

- Two fire extinguishers
- Six mercury thermostats
- Five motion sensors
- Two security alarm panels
- Two smoke detectors
- One fire alarm
- One-hundred ninety fluorescent light bulbs
- Eighty light ballasts
- One bottle each of mouthwash, disinfectant spray, glass cleaner and Bab-O cleaner
- One air conditioning compressor unit and associated refrigerant/CFCs (approximately 18 lbs)

5.2.17.2 Universal Waste

Universal wastes are hazardous wastes that are more common and pose a lower risk to people and the environment than other hazardous wastes. If these waste streams are not managed as universal waste, then the waste must be managed under the applicable hazardous waste regulations if the waste exhibits any hazardous waste characteristic. Connecticut universal wastes are regulated under 40 CFR 273.1 and Sections 22a-449(c)-113(a)(2)(B) of the Regulations of Connecticut State Agencies. There are five waste streams that can be managed as a universal waste in Connecticut. These universal wastes are:

- Batteries,
- Mercury-containing thermostats and other mercury-containing equipment,
- Certain pesticides,

- Lamps (including but not limited to fluorescent, neon and mercury vapor lamps), and
- Used electronics.

A universal waste generator must manage universal wastes in a way that prevents releases of any universal waste or component, or constituent to the environment. Universal waste pesticides, lamps and mercury-containing equipment (e.g., thermostats) must be stored in a container. A handler must contain any universal waste battery that shows evidence of leakage, spillage or damage that could cause leakage in a container. All containers for universal waste must be closed, structurally sound, compatible with the contents of the universal waste, and must be capable of preventing leakage, spillage or damage that could cause leakage. Used electronics must be stored in a building with a roof and four walls or in a cargo carrying portion of a truck, in a manner to prevent used electronics from being exposed to the environment.

TRC observed several locations within the maintenance and repair hangars at the facility where battery charging and storage was occurring. TRC did not observe significant accumulation of other universal wastes at the Site. For those locations where universal waste was observed, TRC did not observe any conditions which indicated significant releases of universal wastes or universal waste constituents (broken bulbs, leaking pesticide containers, leaking acid batteries, etc.) to the environment.

5.3 Adjoining and Surrounding Properties

5.3.1 Adjacent Properties

During the Site reconnaissance, and as referenced briefly above in previous sections, TRC observed the following adjacent properties from the Site and publicly accessible areas (e.g., public roadways, etc.):

Direction From Site	Occupant (Use if Known)
North	Maxim Road with Connecticut Resource Recovery Authority (CRRA) Trash to Energy Plant beyond.
South	MDC Hartford Water Pollution Treatment Plant
East	Connecticut River with the City of East Hartford beyond.
West	Commercial / light industrial properties

Based on TRC's limited observations, no apparent significant environmental concerns were noted at the adjoining properties.

5.3.2 Surrounding Properties

Based on TRC's limited surrounding property reconnaissance, no apparent significant environmental concerns were observed.

6.0 PHASE I FINDINGS AND CONCLUSIONS

TRC has prepared this Phase I ESA in conformance with the ASTM Practice E 1527-05 scope and limitations and with Connecticut's SCGD on behalf of ConnDOT for the Brainard Airport property located at 233 Maxim Road, Hartford, Hartford County, Connecticut. The research conducted to support the Phase I ESA findings contained herein included: making one or more visits to the Site to perform reconnaissance, conducting interviews with people knowledgeable of the Site, interviewing State and local municipal officials, reviewing an independently-generated report containing State and Federal environmental database information, as well as conducting file reviews with appropriate State and local governmental agencies.

Per the ASTM standard, findings can include Recognized Environmental Conditions (RECs), historical RECs (HRECs), and de minimis conditions. RECs are conditions where the data or information collected indicates that there is, or has been, a release, or that there is the potential for or material threat of a release of hazardous substances or petroleum products into the structures at the Site, or into the soil, groundwater, or surface water. A material threat is defined as a physically observable or obvious threat, which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health and/or the environment. HRECs are generally conditions that in the past would have been considered a REC, but which may or may not currently be considered a REC. A de minimis condition is described as a condition that does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies.

AOCs are defined in the SCGD as locations or areas at a site where hazardous waste and/or hazardous substances (including, but not limited to, petroleum products) have been or may have been used, stored, treated, handled, disposed, spilled, and/or released to the environment.

6.1 RECs and AOCs

During conduct of this Phase I ESA, TRC noted the presence of several common features or operations throughout the Site that may represent RECs or AOCs due to function or design. Given the similarity of design, function, or operation, TRC has elected to assess the environmental impact of these features or operations on a group by group basis. The similarity of design, function, or operation coupled with a general lack of individual feature integrity test data, spill, release or leak information, physical observation (i.e., underground features), or Site personnel knowledge lends itself to application of a consistent methodology for assessment. The rationale used to assess if the following features or operations are collectively considered RECs or AOCs is provided below. However, please note that should site-specific information or knowledge conflict with the general approach outlined below at specific locations these features will be noted in the summary of RECs and AOCs.

- Oil water separators (OWS)

- Parts washers
- Transformers

Oil water separators (OWS) are common features present in airport and hangar operations. These subsurface structures are typically installed outside a hangar or building and consist of a concrete structure that is visible as a concrete pad at the surface with access man ways to allow removal of accumulated contents. OWSs receive wastewater, commonly from floor drains in the facility, and are designed to separate oils from wastewater. OWSs do not receive sanitary wastewater discharges. In general, OWSs operate by passive separation of oil from water by means of weirs or coalescing plates to isolate less dense (e.g., floating) materials such as oil from wastewater. OWSs are designed to retain oils and are designed as watertight structures. TRC has elected to categorize OWSs as AOCs due to their accumulation of oils, but unless specific knowledge is available they are not considered RECs due to their inherent design as watertight structures.

Parts washers are another common feature in airport and hangar operations. These devices are typically located inside hangars or maintenance areas. Parts washers are used to remove accumulations of grease, oil, sediment or debris from small metallic parts such as those involved in engine repair and maintenance operations. Most parts washers are self-contained units with a lower reservoir containing the parts washing solvent. This solvent may be a mineral spirits or naphtha based material, or could be an alkaline-based aqueous solution. The solvent is typically sprayed on the part to be cleaned in a "sink"-type basin contained within the unit. It is common practice for parts washers to be under a service contract whereby a vendor will periodically remove and replace the solvent with fresh material.

During site visits TRC noted the presence of many dielectric fluid filled electrical transformers throughout the airports and hangars. In general, dielectric-fluid filled transformers were observed at exterior locations near buildings and hangars. Similar to parts washers, TRC considers dielectric fluid filled transformers to be AOCs due to the presence of heat transfer fluids, but they are not considered RECs unless location-specific observations or other information suggests an obvious threat to the environment.

Completion of this Phase I ESA has resulted in the identification of RECs and AOCs and the following table contains a summary of these findings.

REC/AOC Designation	Location	Description
AOC-1	Land area east of Building I – encompasses current vehicle parking area east of building	Historic location of (3) airplane repair hangars – 1920s – 1945. Historic airplane maintenance, repair and refueling activities involving petroleum products and/or other potential contaminants.

REC/AOC Designation	Location	Description
AOC-2	Vehicle parking lot east of Building I - Fenced vehicle parking lot on eastern side of building – southeast corner of gravel parking lot	Former location of 2,000-gallon gasoline and 3,000-gallon diesel USTs with dispenser. No soil sampling data associated with removal activities
AOC-3/REC-3	Eastern side of Building I	Former leaking 5,000-gallon fuel oil tank location. Tank removed 1999. Soil contamination remained in tank grave following remedial excavation activities.
AOC-4	Eastern side of Building I – northwest corner of fenced vehicle parking area – immediately west of existing vehicle wash rack	Former hazardous waste storage container location and former used oil AST location – potential releases or spills associated with the satellite waste storage activities.
AOC-5	Eastern side of Building I – northwest corner of fenced vehicle parking area – beneath existing vehicle wash rack	Former used oil storage UST – unknown size – potential releases to subsurface from former UST – no soil sampling data associated with removal activities
AOC-6	Ramp area south of Building I – three (3) separate locations historically identified	Former fuel distribution boxes and product delivery line(s) – documented release of petroleum hydrocarbons to site soils.
AOC-7	Ramp area south of Building I	Former UST location – unknown size – discovered during ramp reconstruction / paving activities – tank reportedly removed – no information available regarding soil sampling as part of UST removal activities.
AOC-8	Northern side (parking lot area) of Building H	Identified location of 550-gallon and 2,000-gallon gasoline USTs. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-9	Northeast corner of Building H	Fuel oil product delivery line identified in basement of building leading out of building to northern exterior area. Unknown if UST currently exists.
AOC-10	Eastern side of Building G	Existing oil/water separator – potential for soil impacts if overflow or failure of system occurred.
AOC-11	Northern side of Building G	Location of former fuel oil UST – no information available regarding removal or soil sampling as part of UST removal activities.
AOC-12	Northwest exterior corner of Building G	Location of historic gasoline UST - no information available regarding removal or soil sampling as part of UST removal activities.

REC/AOC Designation	Location	Description
AOC-13	Building G	Former airport maintenance facility for approximately 90 years – assumed storage, use and handling of petroleum and other potential contaminants.
AOC-14	Southwest of Building G – North of Building F	Current location of a 4,000-gallon unleaded gasoline UST, 4,000-gallon diesel UST and two (2) product dispensers. No assessment data to document if a release of petroleum hydrocarbons has occurred from the petroleum storage and delivery system.
AOC-15	Southwest of Building G – North of Building F	Former location of 2,000-gallon gasoline UST. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-16	Southwest exterior corner of Building F	Reported location of former diesel UST. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-17	Building F	Airport maintenance facility for approximately 90 years – storage, use and handling of petroleum and other potential contaminants.
AOC-18	South-southeast of Building F	Former location (assumed they were removed but not confirmed) of (2) 10,000-gallon Aviation gas USTs. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-19	West of Building F	Reported former location of fuel oil UST. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-20	South-southwest of Building F and north of Building E	Former location (assumed they were removed but not confirmed) of (2) 10,000-gallon Jet A fuel USTs. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-21	North of Building E	Reported location of "Parcel F" UST. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-22	Northwest of Building E	AST fuel farm loading ramp holding tank – unknown if releases have occurred from the emergency holding tank system from historic spills or if the tank is serviced (pumped) or functioning per design specifications.
AOC-23	Northwest of building E	Airport facility AST fuel farm – concrete walled containment - 12,000-gallon Avgas, 12,000-gallon Jet A, 275-gallon Avgas and 275-gallon Jet A ASTs. Unknown if historic releases or spills have occurred associated with the tanks that have impacted soil / or groundwater in the area of the tanks.

REC/AOC Designation	Location	Description
AOC-24	Northwest of Building E	One of two possible locations (see AOC-28) for (6) 6,000-gallon Avgas and Jet A USTs. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-25	Northwest of Building E	Possible former location of 10,000-gallon Avgas and 10,000-gallon Jet A USTs. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-26	Southwest interior corner of Building E	Existing oil/water separator – potential for soil impacts if overflow or failure of system occurred.
AOC-27	Building E	Existing aircraft maintenance and repair facility. Handling and storage of petroleum products, solvents, fuels and lubricants. Potential for historic spills / releases to have impacted the environment.
AOC-28	Northwest of Building E	One of two possible locations (see AOC-24) for (6) 6,000-gallon Avgas and Jet A USTs. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-29 / REC-29	East of Building E, grassy area eastern side of ramp	Location of historic 300-gallon avgas spill. Impacted soil removal activities completed. No groundwater sampling completed in the area of the release. Potential of residual soil contamination.
AOC-30	Northern and Eastern sides of Building C	Possible location of former 8,000-gallon UST, 4,000-gallon UST and product dispenser. A sketch contained in a 1984 tank tightness test of an 8,000-gallon UST showed the location on the northern side of a “Corporate Air” hangar. The sketch also showed the location of a 4,000-gallon UST and a product dispenser. However, the sketch also showed a taxiway on the northern side of the hangar that is not believed to have been present at the time. In addition, Corporate Air occupied two separate hangars during this time period. Based on this information, the northern and eastern sides of Building C are incorporated into this AOC. The 4,000-gallon UST was listed on the sketch as “dead” and was not tested. These USTs are also associated with AOC-34 which is located on the northern side of Building B, the other hangar occupied by Corporate Air at the time.

REC/AOC Designation	Location	Description
AOC-31	Northeast exterior corner of Building B	A 250-gallon double-walled used oil AST was observed at this location. The integrity of the tank appeared to be sound. The tank is filled manually by pouring buckets of waste oil into the tank. Minor staining was noted on the asphalt surface beneath the fill port area (eastern end of tank). However, the asphalt in this area had been recently replace so it is currently unknown as to the degree of spills to ground surface prior to the installation of the new asphalt surface beneath the tank.
AOC-32	Northwest of Building B – outside airport perimeter fence	Existing oil/water separator – potential for soil impacts if overflow or failure of system occurred.
AOC-33	Northwest of Building B – outside airport perimeter fence	Historic oil/water separator location– potential for soil impacts if overflow or failure of system occurred. Asphalt in the area of the former O/W separator appeared to have recently been replaced. Unknown if the structure was removed or still exists in place.
AOC-34	Northern side of Building B	Possible location of former 8,000-gallon UST, 4,000-gallon UST and product dispenser. A sketch contained in a 1984 tank tightness test of an 8,000-gallon UST showed the location on the northern side of a “Corporate Air” hangar. The sketch also showed the location of a 4,000-gallon UST and a product dispenser. A single vent pipe was observed on the northern side of Building B during the site inspection. The 4,000-gallon UST was listed on the sketch as “dead” and was not tested. Note: Due to the unknown exact location of these USTs are also associated with AOC-30 which is located on the northern and eastern sides of Building C, the other hangar occupied by Corporate Air at the time.
AOC-35	Building C	Existing aircraft maintenance and repair facility. Handling and storage of petroleum products, solvents, fuels and lubricants. Potential for historic spills / releases to have impacted the environment.
AOC-36	South of Building C and east-northeast of Building B	Former location (assumed they were historically removed but not confirmed) of (3) 4,000-gallon Avgas USTs and dispenser. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-37	East of Building B	Possible location of former USTs due to historic figure showing “fuel farm” in this area of the Site.

REC/AOC Designation	Location	Description
AOC-38	Building B	Existing aircraft maintenance and repair facility. Handling and storage of petroleum products, solvents, fuels and lubricants. Potential for historic spills / releases to have impacted the environment.
AOC-39	Building A	Existing aircraft maintenance and repair facility. Handling and storage of petroleum products, solvents, fuels and lubricants. Potential for historic spills / releases to have impacted the environment.
AOC-40	East-northeast of Building A – southeast of Building B	Former location (assumed they were historically removed but not confirmed) of (3) 4,000-gallon Avgas USTs and dispenser. No information available regarding removal or soil sampling as part of UST removal activities.
AOC-41	Northern side of Building A	Existing oil/water separator – potential for soil impacts if overflow or failure of system occurred.
AOC-42	T-Hangar Buildings – all buildings - south-central portion of the Site	Potential impacts to soil and/or groundwater from current and historic airplane maintenance, repair, washing and storage activities in this area of the Site.
AOC-43	CT Aero Tech School	Potential releases from hazardous waste storage and usage, painting and hazardous waste generating activities. Hazardous waste storage room, petroleum storage, painting, solvent use and storage were all documented during the site inspection. Majority of hazardous waste activities in the hangar portion of the building and the southern "workshop" portions of the building.
AOC-44/REC-44	Vacant land parcel – northwest corner of airport property – west of Buildings F and Building G	Documented soil and groundwater impacts from historic airport activities and/or historic fill utilized at the Site.
AOC-45	Building I	Historic military aircraft maintenance and repair facility. Handling and storage of petroleum products, solvents, fuels and lubricants. Potential for historic spills / releases to have impacted the environment.
AOC-46/REC-46	Vehicle parking lot east of Building I - Fenced vehicle parking lot on eastern side of building – southeast corner of gravel parking lot	Removal of 1,500-gallon steel JP-4 UST. Release of petroleum hydrocarbons identified to Site soil. Excavation activities terminated prior to the removal of all impacted soil due to possible undermining of building and utility locations. Residual petroleum hydrocarbon impacted soil identified at the Site. No groundwater assessment completed.

REC/AOC Designation	Location	Description
AOC-47 (3 locations)	East of Building I, southwest corner of Building E and southwest corner of CT Aero Tech School	Electrical transformers containing dielectric oil. No observed leaks or releases during site inspection.
AOC-48 (2 locations)	Southeast and northeast corners of the airport property at Connecticut River	Potential impacts to soil at stormwater outfall locations on banks of Connecticut River.
AOC-49 (2 locations)	Southwest corner of CT Aero Tech School and eastern side of Building I	Diesel generators (3) – under-belly fuel storage.
AOC-50	Southern side of the CT Aero Tech School	Existing oil/water separator – potential for soil impacts if overflow or failure of system occurred.
AOC-51	Extreme east-central portion of Site between grass runway and CT River dike.	Reported location of main regional jet fuel supply line that transverses the Site and a valve associated with the subsurface line existing on Site.

6.2 HRECs

No HRECs were identified by TRC during this Phase I ESA.

6.3 De Minimis Conditions

During the site inspection, TRC identified *de minimis* spills and staining were observed in all hangar buildings (including Building I - hangar area and northeast garage bay), T-hangar individual spaces, ConnDOT maintenance building (Building F) and the Aero Tech School hangar and workshop areas.

6.4 Data Gaps

Data gaps identified during the course of this assessment included:

- Failure to obtain an environmental lien search from the User.
- Failure to obtain market value information from the User.

Based on a review of other historical sources, this lack of information is not considered a significant data gap. The RECs, AOCs and data gaps presented herein collectively represent the preliminary conceptual site model (CSM) for the Site. The CSM may be refined and further developed as the conceptual site modeling process continues throughout the course of any subsequent site investigations.

8.0 ENVIRONMENTAL PROFESSIONAL STATEMENT AND SIGNATURE

Definition of an Environmental Professional and Relevant Experience Thereto Pursuant to 40 CFR 312:

(1) A person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (see §312.1(c)) on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20(e) and (f).

(2) Such a person must: (i) hold a current Professional Engineer's or Professional Geologist's license or registration from a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) and have the equivalent of three (3) years of full-time relevant experience; or (ii) be licensed or certified by the federal government, a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) to perform environmental inquiries as defined in §312.21 and have the equivalent of three (3) years of full-time relevant experience; or (iii) have a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of five (5) years of full-time relevant experience; or (iv) have the equivalent of ten (10) years of full-time relevant experience.

(3) An environmental professional should remain current in his or her field through participation in continuing education or other activities.

(4) The definition of environmental professional provided above does not preempt state professional licensing or registration requirements such as those for a professional geologist, engineer, or site remediation professional. Before commencing work, a person should determine the applicability of state professional licensing or registration laws to the activities to be undertaken as part of the inquiry identified in §312.21(b). (5) A person who does not qualify as an environmental professional under the foregoing definition may assist in the conduct of all appropriate inquiries in accordance with this part if such person is under the supervision or responsible charge of a person meeting the definition of an environmental professional provided above when conducting such activities.

Relevant experience, as used in the definition of environmental professional in this section, means: participation in the performance of all appropriate inquiries investigations, environmental site assessments, or other site investigations that may include environmental analyses, investigations, and remediation which involve the understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions and for which professional judgment was used to develop opinions regarding conditions indicative of releases or threatened releases (see §312.1(c)) to the Site. The environmental professionals resume has been included in Appendix I.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

BRAINARD AIRPORT
HARTFORD, CT 06114

COORDINATES

Latitude (North):	41.7388000 - 41° 44' 19.68''
Longitude (West):	72.6487000 - 72° 38' 55.32''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	695535.1
UTM Y (Meters):	4623235.0
Elevation:	36 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/28/2011 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 08/19/2011 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/15/2012 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/15/2012 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/15/2012 has revealed that there are 5 RCRA-CESQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/30/2011 has revealed that there are 2 US INST CONTROL sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the SHWS list, as provided by EDR, and dated 04/23/2010 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 06/27/2011 has revealed that there are 4 US BROWNFIELDS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/15/2012 has revealed that there are 11 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CPCS list, as provided by EDR, and dated 01/28/2011 has revealed that there are 21 CPCS sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter:	No

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110003010401

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110003019732

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110002482590

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

RELIABLE ELECTRIC MOTOR INC (Continued) **1000245312**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

CONN POWER SYSTEMS LLC (Continued) **1000300088**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Transfer Forms:	Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAF)(DEP-PERD-PTP-200).

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter:	No

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110002493212

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: U055
Waste name: BENZENE, (1-METHYLETHYL)- (I)

Waste code: U239
Waste name: BENZENE, DIMETHYL- (I,T)

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE

TOMMYS GARAGE (Continued) **1004680956**

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110003015629

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

ALL WASTE INC (Continued) **1010314652**

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040
Waste name: TRICHLOROETHYLENE

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

CT LIGHT & POWER S MEADOW (Continued) **1000666099**

and settlements.

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to

METROPOLITAN DISTRICT (Continued) **1000367811**

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
