Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Highlights:	Upon cleanup, this property is used by Goodwin College, a non-profit institution, to create a Connecticut River Campus, including public and private open space and river access. PPF - Former General Oil Property, 12/20/06 7/31/09: Remediation Action Plan draft finished with final version to be completed in August 2009. 9/30/09: Remediation Action Plans for both 133 and 195 Riverside Drive were completed. On 9/30/09, a public meeting was held at Goodwin College to discuss the plans and solicit public comment on them. Additionally, in September 2009 a Request for Proposals was prepared and issued to potential remediation contractors for remedial work at 133 and 195 Riverside Drive. This site is part of Goodwin College's new Connecticut River Campus. The MetroHartford Brownfields Assessment Program funded Phase I, II and Limited Phase III Environmental Site Assessments total program investment of 150,723 to enable redevelopment of three petroleum storage sites into a new Connecticut River Campus. Following the assessments, the College funded a Remedial Action Plan, along with securing funding to allow for cleanup to begin on the three sites, totaling 30 acres. As a result of having in place Phase I and II EPA-funded Environmental Assessments, Goodwin College was able to secure over 24 million in private bank financing along with 3 million in grant funding from the Connecticut Brownfield Redevelopment Authority and 2.25 million in

grant funding from the CT Department of Economic and Community Development all of which were used for remediation and construction costs for the first-phase of construction. In 2008, Goodwin College was awarded three 200,000 Cleanup grants from EPA for remediation to begin preparing three additional sites at the River Campus for future development. The College has stated that it would not have been eligible for such funding if the Phase I & II Assessments, funded by the MetroHartford Program, had not been completed. To date, the EPA grant funds used for environmental assessments and clean-up on the college properties has leveraged an investment of over 60 million in the development of the new Connecticut River Campus, with 110 million pending for the construction of three new magnet schools on college-owned property. Three contiguous properties (133, 195 7 211 Riverside Drive) have been cleaned to residential standards and the College's academic and administrative buildings. The buildings on 133 & 195 were completed in 2009 & 2010 for use as an incubator for the College's environmentally themed magnet high school. The permanent high school (now located on another former brownfield site) has been completed and the two incubator buildings have been repurposed as college classroom and faculty space. Goodwin College has stated 500 jobs are associated with the final use of the property. These jobs represent Goodwin College and CT River Academy (magnet high school) faculty and staff. Former Use: 133 and 195 Riverside: Goodwin College Inc deed:2933/222 acquisition date: 08/15/2007 Site is a former petroleum storage and distribution facility. Immediate past owner is Whitestar Holding Company. The 133 Riverside Drive parcel is 1.98 acres in size and contained a one-story concrete building with a footprint of approximately 3,300 square feet. This building was constructed in 1952 and was occupied by HHS Mechanical Contractors, a piping system design and fabrication contractor. The building's garage was reportedly used previously for vehicle washing and possibly for vehicle repair or maintenance. The property was used as a petroleum terminal by 1952. The final three above-ground bulk petroleum storage tanks were removed from this parcel in 2005. The 4.15-acre 195 Riverside Drive parcel abuts 133 Riverside Drive to the south and contained two one-story, brick industrial buildings with footprints of approximately 1,500 and 7,300 square feet. The smaller building was occupied by JC Mechanical Controls, a heating and a

Property Description:	133 and 195 Riverside: Goodwin College Inc deed:2933/222 acquisition date: 08/15/2007 Site is a former petroleum storage and distribution facility. Immediate past owner is Whitestar Holding Company. The 133 Riverside Drive parcel is 1.98 acres in size and contained a one-story concrete building with a footprint of approximately 3,300 square feet. This building was constructed in 1952 and was occupied by HHS Mechanical Contractors, a piping system design and fabrication contractor. The building's garage was reportedly used previously for vehicle washing and possibly for vehicle repair or maintenance. The property was used as a petroleum terminal by 1952. The final three above-ground bulk petroleum storage tanks were removed from this parcel in 2005. The 4.15-acre 195 Riverside Drive parcel abuts 133 Riverside Drive to the south and contained two one-story, brick industrial buildings with footprints of approximately 1,500 and 7,300 square feet. The smaller building was occupied by JC Mechanical Controls, a heating and air conditioning contractor. The larger building was vacant at the time of the Phase II ESA and was most recently occupied by Alert, Inc., a scientific instrumentation service company. The southern portion of the larger building was likely used for vehicle repair and maintenance and contained a shop for Alert. A petroleum terminal with up to eight above-ground storage tanks ASTs operated on this parcel beginning in the 1930s or 1940s. The tanks were removed from the property during the period of 1989 through 1996.

Highlights:	Upon cleanup, this property is used by Goodwin College, a non-profit institution, to create a Connecticut River Campus, including public and private open space and river access. PPF - Former General Oil Property, 12/20/06 7/31/09: Remediation Action Plan draft finished with final version to be completed in August 2009. 9/30/09: Remediation Action Plans for both 133 and 195 Riverside Drive were completed. On 9/30/09, a public meeting was held at Goodwin College to discuss the plans and solicit public comment on them. Additionally, in September 2009 a Request for Proposals was prepared and issued to potential remediation contractors for remedial work at 133 and 195 Riverside Drive. This site is part of Goodwin College's new Connecticut River Campus. The MetroHartford Brownfields Assessment Program funded Phase I, II and Limited Phase III Environmental Site Assessments total program investment of 150,723 to enable redevelopment of three petroleum storage sites into a new Connecticut River Campus. Following the assessments, the College funded a Remedial Action Plan, along with securing funding to allow for cleanup to begin on the three sites, totaling 30 acres. As a result of having in place Phase I and II EPA-funded Environmental Assessments, Goodwin College was able to secure over 24 million in private bank financing along with 3 million in grant funding from the Connecticut Brownfield Redevelopment Authority and 2.25 million in grant funding from the CT Department of Economic and Community Development all of which were used for remediation and construction costs for the first-phase of construction. In 2008, Goodwin College was awarded three 200,000 Cleanup grants from EPA for remediation to begin preparing three additional sites at the River Campus for future development. The College has stated that it would not have been eligible for such funding if the Phase I & II Assessments, funded by the MetroHartford Program, had not been completed. To date, the EPA grant funds used for environmental assessments and clean-up on the college properties has leveraged an investment of over 60 million in the development of the new Connecticut River Campus, with 110 million pending for the construction of three new magnet schools on college-owned property. Three contiguous properties (133, 195 7 211 Riverside Drive) have been cleaned to residential standards and the College's academic and administrative buildings. The buildings on 133 & 195 were completed in 2009 & 2010 for use as an incubator for the College's environmentally themed magnet high school. The permanent high school (now located on another former brownfield site) has been completed and the two incubator buildings have been repurposed as college classroom and faculty space. Goodwin College has stated 500

Riverside Drive parcel is 1.98 acres in size and contained a one-story concrete building with a footprint of approximately 3,300 square feet. This building was constructed in 1952 and was occupied by HHS Mechanical Contractors, a piping system design and fabrication contractor. The building's garage was reportedly used previously for vehicle washing and possibly for vehicle repair or maintenance. The property was used as a petroleum terminal by 1952. The final three above-ground bulk petroleum storage tanks were removed from this parcel in 2005. The 4.15-acre 195 Riverside Drive parcel abuts 133 Riverside Drive to the south and contained two one-story, brick industrial buildings with footprints of approximately 1,500 and 7,300 square feet. The smaller building was occupied by JC Mechanical Controls, a heating and air conditioning contractor. The larger building was vacant at the time of the Phase II ESA and was most recently occupied by Alert, Inc., a scientific instrumentation service company. The southern portion of the larger building was likely used for vehicle repair and maintenance and contained a shop for Alert. A petroleum terminal with up to eight above-ground storage tanks ASTs operated on this parcel beginning in the 1930s or 1940s. The tanks were removed from the property during the period of 1989 through 1996.

Connecticut River Campus. Following the assessments, the College funded a Remedial Action Plan, along with securing funding to allow for cleanup to begin on the three sites, totaling 30 acres. As a result of having in place Phase I and II EPA-funded Environmental Assessments, Goodwin College was able to secure over 24 million in private bank financing along with 3 million in grant funding from the Connecticut Brownfield Redevelopment Authority and 2.25 million in grant funding from the CT Department of Economic and Community Development all of which were used for remediation and construction costs for the first-phase of construction. In 2008, Goodwin College was awarded three 200,000 Cleanup grants from EPA for remediation to begin preparing three additional sites at the River Campus for future development. The College has stated that it would not have been eligible for such funding if the Phase I & II Assessments, funded by the MetroHartford Program, had not been completed. To date, the EPA grant funds used for environmental assessments and clean-up on the college properties has leveraged an investment of over 60 million in the development of the new Connecticut River Campus, with 110 million pending for the construction of three new magnet schools on college-owned property. Three contiguous properties (133, 195 7 211 Riverside Drive) have been cleaned to residential standards and the College's academic and administrative buildings. The buildings on 133 & 195 were completed in 2009 & 2010 for use as an incubator for the College's environmentally themed magnet high school. The permanent high school (now located on another former brownfield site) has been completed and the two incubator buildings have been repurposed as college classroom and faculty space. Goodwin College has stated 500 jobs are associated with the final use of the property. These jobs represent Goodwin College and CT River Academy (magnet high school) faculty and staff. Property Description:	133 and 195 Riverside: Goodwin College Inc deed:2933/222 acquisition date: 08/15/2007 Site is a former petroleum storage and distribution facility. Immediate past owner is Whitestar Holding Company. The 133 Riverside Drive parcel is 1.98 acres in size and contained a one-story concrete building with a footprint of approximately 3,300 square feet. This building was constructed in 1952 and was occupied by HHS Mechanical Contractors, a piping system design and fabrication contractor. The building's garage was reportedly used previously for vehicle washing and possibly for vehicle repair or maintenance. The property was used as a petroleum terminal by 1952. The final three above-ground bulk petroleum storage tanks were removed from this parcel in 2005. The 4.15-acre 195 Riverside Drive parcel abuts 133 Riverside Drive to the south and contained two one-story, brick industrial buildings with footprints of approximately 1,500 and 7,300 square feet. The smaller building was occupied by JC Mechanical Controls, a heating and air conditioning contractor. The larger building was vacant at the time of the Phase II ESA and was most recently occupied by Alert, Inc., a scientific instrumentation service company. The southern portion of the larger building was likely used for vehicle repair and maintenance and contained a shop for Alert. A petroleum terminal with up to eight above-ground storage tanks ASTs operated on this parcel beginning in the 1930s or 1940s. The tanks were removed from the property during the period of 1989 through 1996.

Highlights:	Upon cleanup, this property is used by Goodwin College, a non-profit institution, to create a Connecticut River Campus, including public and private open space and river access. PPF - Former General Oil Property, 12/20/06 7/31/09: Remediation Action Plan draft finished with final version to be completed in August 2009. 9/30/09: Remediation Action Plans for both 133 and 195 Riverside Drive were completed. On 9/30/09, a public meeting was held at Goodwin College to discuss the plans and solicit public comment on them. Additionally, in September 2009 a Request for Proposals was prepared and issued to potential remediation contractors for remedial work at 133 and 195 Riverside Drive. This site is part of Goodwin College's new Connecticut River Campus. The MetroHartford Brownfields Assessment Program funded Phase I, II and Limited Phase III Environmental Site Assessments total program investment of 150,723 to enable redevelopment of three petroleum storage sites into a new Connecticut River Campus. Following the assessments, the College funded a Remedial Action Plan, along with securing funding to allow for cleanup to begin on the three sites, totaling 30 acres. As a result of having in place Phase I and II EPA-funded Environmental Assessments, Goodwin College was able to secure over 24 million in private bank financing along with 3 million in grant funding from the Connecticut Brownfield Redevelopment Authority and 2.25 million in grant funding from the CT Department of Economic and Community Development all of which were used for remediation and construction costs for the first-phase of construction. In 2008, Goodwin College was awarded three 200,000 Cleanup grants from EPA for remediation to begin preparing three additional sites at the River Campus for future development. The College has stated that it would not have been eligible for such funding if the Phase I & II Assessments, funded by the MetroHartford Program, had not been completed. To date, the EPA grant funds used for environmental assessments and clean-up on the college properties has leveraged an investment of over 60 million in the development of the new Connecticut River Campus, with 110 million pending for the construction of three new magnet schools on college-owned property. Three contiguous properties (133, 195 7 211 Riverside Drive) have been cleaned to residential standards and the College's academic and administrative buildings. The buildings on 133 & 195 were completed in 2009 & 2010 for use as an incubator for the College's environmentally themed magnet high school. The permanent high school (now located on another former brownfield site) has been completed and the two incubator buildings have been repurposed as college classroom and faculty space. Goodwin College has stated 500 jobs are associated with the final use of the property. These jobs represent Goodwin College and CT River Academy (magnet high school) faculty and staff. The second structure was a former office/garage building of approximately 7,500 square feet. The southern portion of the smaller building was used to service vehicles. The eastern portion of this parcel is located east of Riverside Drive and contains no buildings. Above ground bulk petroleum storage tanks occupied the western portion of the property beginning circa 1931 and the eastern portion of the parcel by 1952. The tanks were removed in 2002. The Buckeye Pipeline site is an approximately 0.8 acre portion of vacant land at the southeastern corner of the 11 acre 211 Riverside Drive parcel. It surrounds an area of land that is currently leased to Buckeye Pipeline.

GW Comments:	Grade SC/SB river, the Conncecticut River, borders the site to the west. There are no private or potable wells within 500 feet of the site. The site and vicinity has public water and sewer. The nearest residences with basements are located 200 feet east, upgradient from the site.
Location Desc:	4.15 -acre lot contains two one-story brick industrial buildings. The southernmost building is vacant and was most recently occupied by Alert, Inc., a scientific instrumentation service company. The building also contained a vehicle repair and maintenance shop. It is the former 500-gallon waste oil and 1,000 gallon slop tank that is relevant at this site.Generally the soil consists of fine to coarse sand (glaciofluvial deposits) overlying a gray clay layer with traces of silt (the aquitard). The aquitard was found to be located approximately 14.5-22 fbg.The bedrock is estimated to be about 150 fbg and is comprised of the Portland Arkose, which is a reddish-brown sedimentary rock ASA brownstone.

Environmental Interest/Information System:

FOUNDRY, INC (Continued) **1000494806**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Type Of Hazard: Polluted groundwater near an occupied building could affect indoor air quality.
Response: DEP directed the property owner to conduct a soil gas study to determine if polluted groundwater poses a risk to indoor air quality.
Actions: Soil vapor was collected and testing did not detect contaminants that would adversely affect indoor air quality. Residential area is comprised of elevated mobile homes with no pathway for vapor intrusion. No abatement action necessary.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

SEH: List of Significant Environmental Hazards Report to DEEP

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

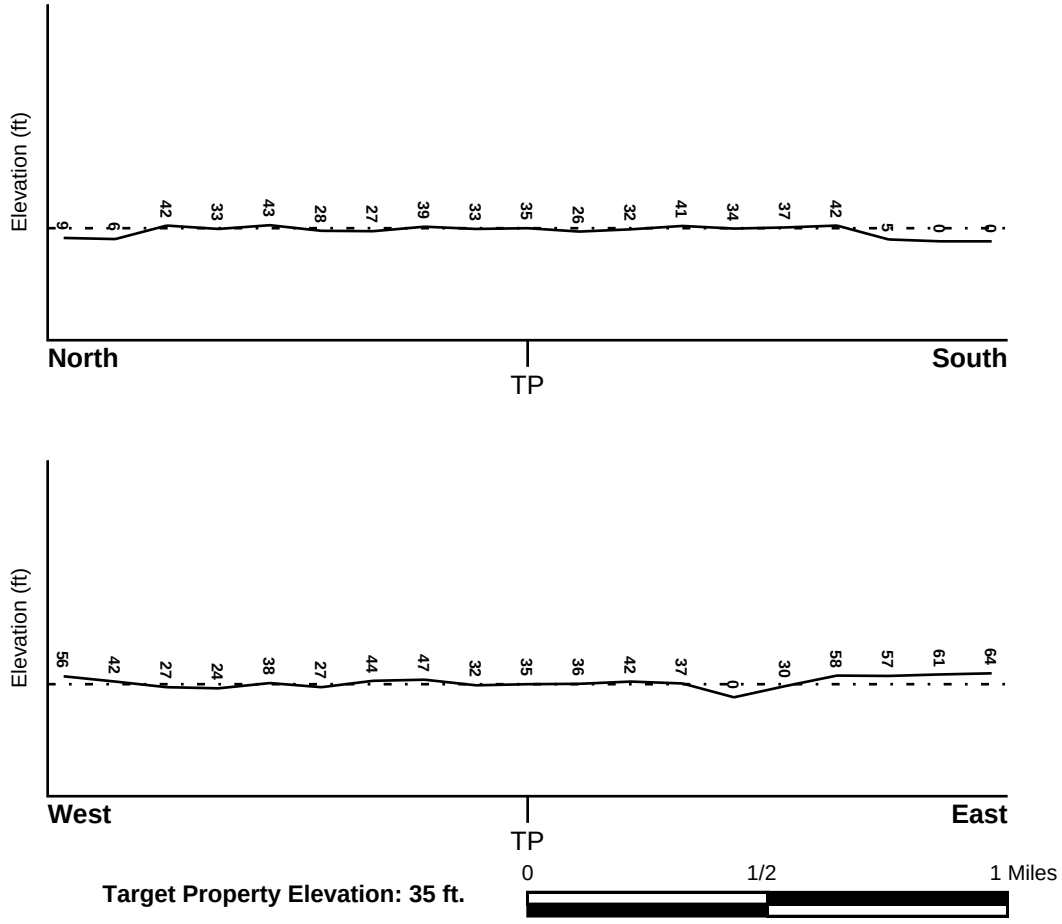
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Udorthents

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Connecticut Leachate and Wastewater Discharge Sites
Source: Department of Environmental Protection
Telephone:
The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EPA-Approved Sole Source Aquifers in Connecticut
Source: EPA
Telephone:
Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Tighe&Bond

APPENDIX H

Phase I Environmental Site Assessment (ESA) Limitations

Tighe&Bond

1. This report has been prepared on behalf of and for the exclusive use of the Client and is subject to and issued in accordance with the Agreement and the provisions thereof. Documents provided on this project shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party without the prior written consent of Tighe & Bond. Reuse of documents by Client or others without Tighe & Bond's written permission and mutual agreement shall be at the user's sole risk, without liability on Tighe & Bond's part and Client agrees to indemnify and hold Tighe & Bond harmless from all claims, damages, and expenses, including attorney's fees, arising out of such unauthorized use or reuse.

2. Tighe & Bond acknowledges and agrees that, subject to the Limitations set forth herein and prior written approval by Tighe & Bond, this report may be provided to specific financial institutions, attorneys, title insurers, lessees and/or governmental agencies identified by Client at or about the time of issuance of the report in connection with the conveyance, mortgaging, leasing, or similar transaction involving the real property which is the subject matter of a report and any work product. Use of this report for any purpose by any persons, firm, entity, or governmental agency shall be deemed acceptance of the restrictions and conditions contained therein, these Limitations and the provisions of Tighe & Bond's Agreement with Client. No warranty, express or implied, is made by way of Tighe & Bond's performance of services or providing an environmental site assessment, including but not limited to any warranty with the contents of a report or with any and all work product.

3. In preparing a report, Tighe & Bond, Inc. may rely on certain information provided by governmental agencies or personnel as well as information and/or representations provided by other persons, firms, or entities, and on information in the files of governmental agencies made available to Tighe & Bond at the time of the site assessment. To the extent that such information, representations, or files may be inaccurate, missing, incomplete or not provided to Tighe & Bond, Tighe & Bond is not responsible. Although there may be some degree of overlap in the information provided by these various sources, Tighe & Bond does not assume responsibility for independently verifying the accuracy, authenticity, or completeness of any and all information reviewed by or received from others during the course of the site assessment.

4. Emerging contaminants, including per- and poly-fluorinated alkyl substances (PFAS), are hazardous materials or mixtures (including naturally occurring or manmade chemical, microbial, or radiological substances) that are characterized by having a perceived or real threat to human health, public safety, or the environment for which there are no published health standards or guidelines and there is insufficient or limited available toxicological information or toxicity information that is evolving or being re-evaluated; or there is not significant new source, pathway, or detection limit information. The state of these compounds is constantly being updated and therefore, Tighe & Bond cannot be held liable for not including these compounds as a potential Recognized Environmental Condition (REC) and/or Area of Concern (AOC). Tighe & Bond will not be liable for not including these or any other compounds in the list of RECs/AOCs even if that compound is detected at a later date.

5. The objectives of the Phase I ESA were to observe the physical characteristics of the subject site with respect to overt evidence of past or present use, storage, and/or

disposal of petroleum or hazardous chemicals, as defined in applicable regulations, and to gather information regarding current and past operations at the subject site. Where access was denied or conditions obscured, Tighe & Bond provides no opinion or report on such areas.

6. This Phase I ESA is a preliminary evaluation of the potential for petroleum and/or hazardous chemicals contamination which involves the review historic land records for the subject site that are **reasonably ascertainable from standard sources**, site observations **to the extent visually or physically observable**, and interviews with available owners and tenants. It does not include the collection and analysis of soil, groundwater, sediment, soil vapor, indoor air or other environmental media samples. A Phase II ESA or subsurface investigation would be required to evaluate the presence or absence of contamination.

7. Unless otherwise noted, an evaluation of "non-scope" issues as defined by ASTM are not included. Users of the Phase I may expand the scope of the due diligence to assess other "business environmental risk or BER" that exist beyond CERCLA liability. Non-scope considerations include:

   a. Asbestos-containing/polychlorinated biphenyl (PCB)-containing building materials
   b. Radon
   c. Lead-based paint and lead in drinking water
   d. Wetlands or other environmental resource areas
   e. Past or current regulatory compliance (federal, state, local, including health & safety) unless specifically indicated otherwise in writing
   f. Indoor air quality (excluding the potential for impacts from hazardous substances rereleased to the subsurface environment)
   g. Biologicals and Mold
   h. Endangered species
   i. Cultural or historical resources

8. Potential BER items can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of the Site.

9. Findings, observations, and conclusions presented in this report are limited by the scope of services outlined in the Agreement, which may establish schedule and/or budgetary constraints for an environmental assessment or phase thereof. Furthermore, while it is anticipated that each assessment will be performed in accordance with generally accepted professional practices and applicable standards (such as ASTM, All Appropriate Inquires (AAI) etc.) and then applicable state and federal regulations, as may be further described in the report and/or the Agreement, Tighe & Bond does not assume responsibility for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of its services.

10. The assessment presented in the report is based solely upon information obtained or received prior to issuance of the report. If additional environmental or other relevant information is developed at a later date, Client agrees to bring such information to the attention of Tighe & Bond promptly. Upon evaluation of such information, Tighe & Bond reserves the right to recommend modification of this report and its conclusions.

11. If included, any database search is conducted under the Notice of Disclaimer/Waiver of Liability included in the database search report.

12. Per the ASTM standard, the ASTM Phase I report is considered valid if completed within 180 days of the transaction/acquisition. Phase I reports completed between 180 days and one year of the transaction/acquisition must be updated. Phase I reports completed beyond one year of the transaction/acquisition are not considered valid per the ASTM standard. Any subsequent relying parties or new users are subject to the same ASTM validity durations.
