Excavation Details

Evidence of Contamination Yes_X_ No___

Comments: Excavation occurred to expose the abandoned 1,500 gallon UST and related piping. No groundwater was encountered. The tank was in poor condition. There was slight discoloration of the soil and the tank grave had a distinct petroleum odor. Tank grave samples were taken and test results showed a TPH concentration of 984 ppm on the West wall, 216 ppm on the East wall and 120 ppm at the bottom of the UST grave. Additional material was excavated. A flame ionization detector, calibrated to methane, was used on site to detect organic vapors during excavation. The Organic Vapor Analyzer (OVA) reading prior to the start of excavation was >1000 ppm on the North wall, Below Detectable Limits (BDL) on the East wall, BDL on the South wall, 5.5 ppm on the West wall, and 110.0 ppm on the grave bottom. Additional material was excavated from the north, west wall and the bottom of the grave. The water table was reached at 9.5 feet below grade. Additional OVA reading of BDL on the North wall and >1000 ppm on the West wall were recorded. Further excavation on the West wall was restricted by the presence of a sewer line and the armory foundation. Confirmation samples were taken for laboratory analyst and the UST grave was closed. Laboratory analyst revealed a TPH of <50 ppm on the East wall and 675 ppm on the West wall.

CONCLUSIONS AND RECOMMENDATIONS

On December 2, 1993, a 1,500 gallon JP-4 tank was removed from the Brainard Field Armory in Hartford, Connecticut by Meeker Pump and Tank Contractors, Inc, as part of the Connecticut Army National Guard Statewide Underground Storage Tank Program. The tank had been found to contain no product .

Confirmatory soil samples were collected from the walls and bottom of the excavation. Samples were sent to Connecticut Testing Laboratories, Inc. for analysis of total petroleum hydrocarbons (TPH) EPA method 4181. Laboratory results showed a TPH concentration of 984 ppm on the West wall, 216 ppm on the East wall, and 120 ppm on the bottom of the grave. A layer of all-weather 4 Mils reinforced polyethylene sheeting was placed in the tank grave and the material backfilled into the grave.

UNDERGROUND STORAGE TANK PROGRAM
CONNDPW PROJECT NO. BI-2B-760
CONN MILITARY DEPARTMENT PROJECT NO. MD-94-Z-B
TANK REMOVAL REPORT(continued)

On March 18, 1994, the grave was excavated generating approximately 59 tons soil and gravel. With the use of a Organic Vapor Analyzer (OVA) detector, calibrated to methane, readings of the North wall was >1000 ppm, the West wall was 5.5 ppm and a bottom sample of 110 ppm were recorded. Further excavation occurred enlarging the UST grave to the north, west and the bottom. The grave bottom was excavated to a depth of 9.5' were the water table was reached. OVA reading of the North wall was found to be BDL however the West wall had a reading of >1000 ppm. Excavation is the westerly direction was stopped because of the presence of a sewer pipe and the proximity of the foundation of the Brainard Field Armory. Excavation downward was halted at 9.5' when the water table was encountered. Two samples were taken from the bottom East wall and the bottom West wall. The excavation was backfilled with clean fill and the contaminated soil was placed on plastic and covered. A total of 59.27 tons of contaminated soil was recycled at Pheonix Soil Inc.

Laboratory results indicate residual contamination in the soil that could not be removed because of the physical structures prohibiting further excavation. Further soil removal is not practical. Based on the lack of volatile organic contamination and the lack of receptors at this site, it is recommended that no further investigation or remediation be implemented.

Further excavation was not required by the representative of the Connecticut Department of Environmental, Oil and Chemical Spills Division, Mr.Erik Gothberg (566-4633) due to the possibility of undermining of the building. It was the belief of the inspector that it was not the requirement of his Division to determine the extent or the concentration of the plume as it extended under the structure.

Mr. Marc Holland
Chief of Engineering Services
Connecticut Airport Authority
334 Ella Grasso Turnpike
Windsor Locks, CT 06096

RE: UST Closure Letter Report – Brainard Airport
233 Maxim Road, Hartford, Connecticut

Dear Mr. Holland:

This letter report summarizes the closure activities associated with two 4,000 gallon underground storage tanks (USTs) at the above referenced site. The USTs were installed in 1988 and were utilized for gasoline and diesel storage. The USTs were connected to fuel dispensers which were used to refuel on-site maintenance vehicles. The fuel dispensers and associated piping were also removed.

UST Closure Activities

The gasoline and diesel USTs were formerly located north of the 233 Maxim Road building and near the southern corner of the 239 Maxim Road building. The site layout and pertinent site features, including the former USTs, fuel dispensers and piping locations, are shown on Figure 1. Photographic documentation of the UST closure activities is also attached.

American Petroleum Equipment & Construction Company, Inc. (APECCO), located in Newtown, Connecticut, completed the UST closure activities for the Connecticut Airport Authority (CAA). UST closure activities were completed using industry-standard equipment and methods, in consideration of the Connecticut Department of Energy and Environmental Protection (CTDEEP) standards and guidelines. The UST closure was also performed in accordance with the Underground Storage Tank System Management regulations (Regulations of Connecticut State Agencies Sections 22a-449(d)-1 through 22a-449(d)-113). The *Notification of Scheduled Permanent Closure of Underground Storage Tanks* form was submitted to the CTDEEP prior to the UST removals. The form was submitted on March 15, 2019, more than 30 days before the scheduled removal of the USTs as required.

On February 11, 2019, approximately 655 gallons of liquid remaining in the gasoline and diesel tanks was pumped out by APECCO using a vacuum truck. The liquid was then transported by APECCO to the Tradebe facility in Meriden, Connecticut, where it was disposed. The liquid disposal manifest is attached. By removing the remaining liquid from the tanks, they were placed into temporary closure status and the CTDEEP was notified on February 15, 2019. The CTDEEP subsequently approved the notification in a letter dated February 19, 2019.

On April 17, 2019, both USTs were cleaned in place and 350 gallons of wash water was vacuumed from the USTs by APECCO. The liquid was then transported by APECCO to the same Tradebe facility where it was disposed. The liquid disposal manifest is attached.

On April 24, 2019, the diesel UST was removed from the ground using an excavator. The diesel UST appeared to be in good condition and holes were not noted. The overlying concrete and peastone was removed subsequent to the diesel UST removal. During the diesel UST excavation, three unknown pipes, not associated with this UST system, were observed along the eastern wall of the excavation at approximately 3 ft. below ground surface (bgs.). These three pipes as well as the two UST fuel dispensers and associated piping were removed from the excavation. Both fuel dispensers appeared to be in good condition and apparent leaks or odors were not noted in underlying soils. Absorbent materials were used to collect residual fuel in the diesel UST and product dispersers. The absorbent materials were placed in a drum which is pending proper off-site disposal.

On April 29, 2019, the Connecticut Fire Marshal and the CAA Fire Marshal observed the removal of the gasoline UST. Prior to removal, a venturi pump and dry ice were used to expel any remaining vapors from the gasoline UST. The gasoline UST appeared to be in good condition and holes were not noted. The fire marshals inspected the gasoline tank and did not have any comments regarding the UST removal. Groundwater was observed in the diesel and gasoline tank grave at approximately 7 ft. bgs. In addition, a concrete pad used to anchor the USTs was observed below the former tanks at approximately 11 ft. bgs.

Both of the former 4,000-gallon USTs consisted of single walled, fiberglass reinforced plastic construction. Each UST system utilized a flapper device to prevent overfills as well as a static Automatic Tank Gauging (ATG) system with inventory reconciliation to detect potential releases. The tanks were disposed off-site as solid waste. A Tank Cleaning & Disposal Certificate was provided by APECCO and is attached.

Confirmatory samples were collected following the CTDEEPs *Sampling and Analytical Methods for Underground Storage Tank Closure*. Six confirmatory soil samples were collected from the sidewalls (SW) of the tank grave, including; the northern diesel sidewall (NDSW), the eastern diesel sidewall (EDSW), the western diesel sidewall (WDSW), the eastern gasoline sidewall (EGSW), the southern gasoline sidewall (SGSW), and the western gasoline sidewall (WGSW). Each of the sidewall samples were collected between approximately 6 and 8 ft. bgs. which was consistent with the approximate level of the groundwater surface in the excavation. Two soil samples (DP and GP) were collected below the diesel and gasoline piping, respectively, at a depth of approximately 3 ft. bgs. The samples below the product piping were collected at locations between the fuel dispensers and the UST grave. In addition, two soil samples (D Disp Bott and G Disp Bott) were collected below the diesel and gasoline dispensers, respectively, at approximately 2.5 ft. bgs. The soils in the UST grave consisted primarily of fine sand and peastone. No odors or staining were observed during the collection of the confirmatory soil samples.

Due to detections of polynuclear aromatic hydrocarbons (PAHs) above one or more Connecticut Remediation Standard Regulation (RSR) criterion in soil sample D Disp Bott, the area below the former diesel dispenser was further excavated to and resampled at depths of 3.5 ft. bgs. (D Disp Bott A) and then to 5 ft. bgs. (D Disp Bott B). The concentrations of PAHs in sample D Disp Bott B (5 ft. bgs.) were detected below the RSR criteria and no further excavation was completed. 13.77 tons of soil excavated below the diesel dispenser was stockpiled and subsequently disposed of at Clean Earth of Connecticut. A copy of the manifest is attached.

Groundwater samples (DT Bott and GT Bott) were collected at approximately 7 ft. bgs. from the diesel and gasoline tank graves, respectively. A petroleum odor was detected, but a sheen was not observed on the

groundwater samples. Confirmatory soil and groundwater sample approximate locations are depicted on Figure 1.

The confirmatory soil samples were test-screened for volatile organic compounds (VOCs) using a photo-ionization detector (PID). The results of test-screening of the samples were ≤ 2.5 vapor parts per million (vppm). The soil and groundwater samples were submitted to Complete Environmental Testing, Inc. (CET), a State-certified laboratory, under proper chain-of-custody procedures, and analyzed for the parameters recommended by CTDEEPs *Analytical Methods Used to Characterize Petroleum Releases*. The samples associated with the diesel UST were analyzed for extractable total petroleum hydrocarbons (ETPH) by the Connecticut Method, aromatic volatile organic compounds (AVOCs) and polynuclear aromatic hydrocarbons (PAHs) by EPA Method 8270. The samples associated with the gasoline UST were analyzed for ETPH, AVOCs and fuel oxygenates by EPA Method 8260. The laboratory testing was completed in conformance with Connecticut Reasonable Confidence Protocols (RCP). Although there were several minor non-conformances, the data are usable for their intended purpose. A copy of the data usability evaluation is attached.

The soil analytical results indicated the following:

- ETPH was detected at low concentrations in confirmatory soil samples D Disp Bott (2.5 ft. bgs.) and SGSW (6.5 ft. bgs.). The detected concentrations were below the Residential Direct Exposure Criteria (RDEC), Industrial/Commercial Direct Exposure Criteria (I/C DEC) and GB Pollutant Mobility Criteria (GB PMC).
- AVOCs and fuel oxygenates were not detected in any of the soil samples.
- PAHs were detected at concentrations above the RDEC, the I/C DEC and/or the GB PMC in soil sample D Disp Bott. The area below the former diesel dispenser was excavated to approximately 3.5 ft. bgs. and resampled (D Disp Bott A).
    - PAH concentrations were detected at concentrations above the RDEC and GB PMC in confirmatory soil sample D Disp Bott A (3.5 ft. bgs.). The area below the former diesel dispenser was excavated further to approximately 5 ft. bgs. and resampled (D Disp Bott B). PAHs were not detected in sample D Disp Bott B.
- PAHs were detected in sample DP but at concentrations below the RDEC, I/C DEC and GB PMC.

The groundwater analytical results indicated the following:

- ETPH was detected at low concentrations in groundwater samples DT Bott and GT Bott. The detected concentrations exceeded the Surface Water Protection Criteria (SWPC) that can be requested for site specific use.
- Total xylenes were detected at a concentration above the SWPC in groundwater sample DT Bott. Additional AVOCs were detected in DT Bott and GT Bott but at concentrations below RSR criteria.
- Fuel oxygenates were not detected in groundwater sample GT Bott.
- PAHs were detected in groundwater sample DT Bott but at concentrations below RSR criteria.

The soil and groundwater sample results are presented on Table 1 and Table 2, respectively, and the analytical laboratory reports are attached.

Twelve grab samples consisting of excavated peastone were test-screened for VOCs using a PID. The results of the test-screening of the samples were ≤ 2.1 vppm. As a result, the excavated peastone was utilized as backfill material within the UST excavation area. The UST area was backfilled to grade and paved.

Initial Response Measures / Initial Abatement Measures / Initial Site Characterization

The groundwater results and observations indicated that a petroleum release had occurred. It is unknown when it occurred as there were no indications of equipment failure or soil impact with the exception of very low concentrations of PAHs. As required by the UST regulations, CAA notified CTDEEP of a spill on April 30, 2019 and Case #2019-1943 was issued.

Since the USTs, piping and dispensers were removed from the ground, no other initial response measures were performed. During several inspections, free product and sheens were not observed on the groundwater which accumulated within the UST excavation. Therefore, the groundwater within the grave was not removed and free product removal was not required.

Soil samples were collected from the UST excavation as well as underneath the fuel dispensers and product piping following CTDEEP Guidance. These soil samples characterized the soils within the immediate vicinity of the UST system and, with the exception of low concentrations of PAHs detected underneath the diesel dispenser that were subsequently removed, no soil impacts requiring remediation were identified. The groundwater impacts within the UST excavation appear to be relatively minor, however, we have proposed to complete compliance groundwater monitoring to confirm that concentrations of constituents of concern are decreasing or at a minimal, not increasing. A Corrective Action Plan should be developed outlining the groundwater monitoring program.

Conclusions

UST closure activities were completed in accordance with CTDEEP guidelines and industry-accepted standards. Confirmatory soil and groundwater samples were collected as required and the analytical results indicated petroleum impacts to both soil and groundwater. Soil impacted with low concentrations of PAHs was excavated and disposed off-site. Although the groundwater within the UST excavation was impacted by petroleum, neither free product nor a sheen was observed.

As required by the UST regulations, a spill was called into the CTDEEP and the initial measures required by the UST regulations were completed. A Corrective Action Plan should be developed outlining a groundwater monitoring program to confirm that concentrations of petroleum-related compounds are decreasing or at a minimal, not increasing, and compliance groundwater monitoring requirements are met.

Please contact us if you have any questions.

Sincerely,
Zuvic, Carr and Associates, Inc.

Notification for Underground Storage Tanks

CPPU USE ONLY
App #:
Doc #:
Check #:
Program: UST

Please complete this form, in accordance with the instructions (DEEP-UST-INST-001) to ensure the proper handling of your notification. Print or type unless otherwise noted.

Submit one notification form per site.

Part I: Notification and Fee Type

Check the appropriate box(es) identifying the notification type.

1. LOCATION of UST(s)

Name of site: BRAINARD AIRPORT

Street Address or Location Description: 233 MAXIM RD

City/Town: HARTFORD State: CT Zip Code: 06114 - 1607

2. UST Site ID Number: 64-8620

3. This notification is for: choose i, ii, iii**or** iv	**Fee (a)**	**No. of Fee exempt (b)**	***No. of Tanks excluding (b) (c)**	**Total Fee = (a x c)**
☐ i) first time site notification [new] **(Complete entire application)**	$100.00/ tank [#1032]			
☐ ii) annual notification [renewal] with NO modifications **(Complete Parts I and VII only)**	$100.00/ tank [#1032]			
☐ iii) annual notification [renewal] **with** modifications, (specify modifications under iv below) **(Complete Parts I and VII and modifications only)**	$100.00/ tank [#1032]	0	0	$0
☑ iv) a modification to an existing notification; check any of the following to specify. **(Complete Parts I and VII and modifications only)**				
☐ adding new UST system (Part IV)	$100.00/ tank [#1032]	0	0	$0

Part I: Notification and Fee Type (continued)

3. (modifications continued)	Fee (a)	No. of Fee exempt tanks ($0) (b)	*No. of Tanks excluding (b) (c)	Total Fee = (a x c)
☐ adding an orphan UST system (newly discovered) (Part IV)	$100.00/ tank [#1032]	0	0	$0
☐ update/correction to Part II: owner/operator info/financial responsibility	$0			
☐ transfer of ownership (Part II)	$0			
☐ update/correction to Part III: record info	$0			
☐ update/correction to Part IV: UST system info	$0			
☑ Permanent Closure of an UST system (Part V)	$0		2	$0
Compartmentalized tanks are counted as one tank. ***Manifolded or interconnected tanks count as separate tanks***			***Total Fee:**	$0

*For municipalities, the 50% discount applies. The notification will not be processed without the fee. The fee shall be non-refundable and shall be paid by check or money order to the Department of Energy and Environmental Protection.

Part II: Owner/Operator Information

If an Owner/Operator is a corporation, limited liability company, limited partnership, limited liability partnership, or a statutory trust, it must be registered with the Secretary of State. If applicable, the applicant's name shall be stated **exactly as it is registered with the Secretary of State. Please note, for those entities registered with the Secretary of State, the registered name will be the name used by DEEP.* This information can be accessed at *the Secretary of State's database (CONCORD).* **(www.concord-sots.ct.gov/CONCORD/index.jsp)**

If an Owner/Operator is an individual, provide the legal name (include suffix) in the following format: First Name; Middle Initial; Last Name; Suffix (Jr, Sr., II, III, etc.).

1. **UST Owner Name:** CONNECTICUT AIRPORT AUTHORITY

This affiliate is the registrant (check if true): ☑

Mailing Address: Bradley International Airport

City/Town: Windsor Locks State: CT Zip Code: 06096

Part II: Owner/Operator Information (continued)

8. **Financial Mechanism(s):** Complete the table below identifying the financial assurance mechanism(s) used to demonstrate financial responsibility as specified in the Federal Register. Use the list of surety types below. If an 'other method' is chosen, please specify the method in the table.

A. Self Insurance
B. Commercial Insurance
C. Risk Retention Group
D. Local Government Financial Test
E. Guarantee
F. Surety Bond
G. Letter of Credit
H. Bond Rating Test
I. Trust Fund
J. *State Fund
K. Other Method (specify in table below)

*Pursuant to section 262 of Public Act 12-1 of the June 12th Special Session, the state fund (UST Petroleum Clean-Up Program) will cease to serve as a financial responsibility mechanism on:
October 1, 2012, for those who own or operate USTs on more than five separate sites; and
October 1, 2013 for municipalities and for those who own or operate USTs on five or less separate sites.

Name Of Insurer	Policy Number	Surety Type (insert letter from list above or specify)	Amount Of Coverage	Coverage Start Date	Coverage End Date

Owners/Operators shall complete the attached *"Certification of Financial Responsibility Form" and maintain* such completed form at the facility where the storage tank system(s) are located. **THIS FORM DOES NOT NEED TO BE SUBMITTED but must be updated to reflect any changes.**

Part III: Record Information

Off- Site Storage of Records at a Centralized Location

Does the owner/operator **of more than 10 facilities with UST systems** request to store **certain** records at a centralized location ? ☐ Yes (Leave unchecked if 'No')

If yes, provide the central location address below.

Address: _____

City/Town: _____ State: _____ Zip Code: _____

Such records must be immediately available for inspection by the commissioner or the commissioner's designee at any such central location. Please refer to section 22a-449 q CGS; for storage of underground storage tank system records that may be kept at a centralized location or that must be kept on site.

Part IV: Underground Storage Tank Information

Complete for all tanks and piping at the subject location. Begin by labeling tanks (including compartments, if applicable). Label tanks as required by the instructions. If you have more than 5 tanks in one location, reproduce this section and complete for additional tanks. **You must read the instructions (DEEP-UST-INST-001) in order to properly complete this Part.**

Part VII: Owner/Operator Certification

The owner/operator*and* the individual(s) responsible for actually preparing the notification must sign this part. A notification will be considered incomplete unless all required signatures are provided.

"I have personally examined and am familiar with the information submitted in this document and all attachments thereto, and I certify that based on reasonable investigation, including my inquiry of the individuals responsible for obtaining the information, the submitted information is true, accurate and complete to the best of my knowledge and belief.

I understand that a false statement in the submitted information may be punishable as a criminal offense, in accordance with section 22a-6 of the General Statutes, pursuant to section 53a-157b of the General Statutes, and in accordance with any other applicable statute.

I certify that I have completed a *Certification of Financial Responsibility Form* and such completed form is maintained on-site.

I also certify that this underground storage tank notification is on complete and accurate forms as prescribed by the commissioner without alteration of the text."

Dear sirs:

Enclosed is the required notice of tank removal of a 10,000 gallon underground storage tank that was located on "Parcel F" at Brainard Airport. The tank was removed by Petroleum Services, Inc. of Bristol, Ct. in accordance with all applicable DEP removal guidelines. Attached is all of the pertinent information in connection with this tank removal.

Please let me know if any additional information is required.

Sincerely,

Thomas Sullivan
President

MILITARY DEPARTMENT

STATE ARMORY • HARTFORD, CONNECTICUT 06105-3795

December 22, 1992

TO: Department of Environmental Protection Underground Storage Facilities Program

TO WHOM IT MAY CONCERN:

At present there are two (2) site I. D. numbers for the same National Guard property: one for Brainard Field Facility (64-9013) and one for the Organizational Maintenance Shop (OMS) #7 (64-5985).

To simplify the process, I have combined both the facility and the OMS under the armory number (64-9013).

Combining of the two site I.D.'s has, in some cases, required a re-identification for tanks (see # 21 Comments) on registration form.

Thank you for your attention to this matter.

Precision Testing, as defined by the National Fire Protection Association (NFPA 329), means a test that takes into consideration the temperature coefficient of expansion of the product being tested as related to the temperature change during the test and is capable of detecting a loss of 0.05 gallons per hour in a 12,500 gallon or smaller tank system.

The Criteria established of + or − 0.05 gallons per hour is a mathematical calculation based on actual product volume change and temperature change and is not intended as a permission of a leak.

Testing Conditions:

Tank capacity was supplied by STACK OIL.
The coefficient of expansion was determined by AARON ENVIRONMENTAL SPECIALISTS.
The test included the tank and attached piping.

The 5,000 Gallon, No. 2 Fuel Oil tank was tested under a hydrostatic pressure of 4.4 psi at tank bottom. The tank system was tested for 1 hour/s after stable conditions were reached. During the period of the test, the change in temperature corresponded to an expected volume change of +.0234 gallons per hour. The actual liquid volume change was +.0219 gallons per hour. The final mathematical result of -.0015 gallons per hour MEETS NFPA 329 criteria.
There was NO water measured inside of the tank.

Recommendations:

The tank and attached piping presently MEETS 22a-449(d)-1 requirements. Send a copy of this certificate to the CT DEP. Retest as specified by local, state and federal requirements.

Disclaimers:

Many factors effect the results of precision test ng of underground tanks including, but not limited to, entrapped air-vapor pockets, water table variations, tank-end deflections, product expansion and contraction, wind, evaporation, barometric pressure, etc. Contractor's personnel are trained to understand and, where possible, to adjust for these factors during the performance of a precision test. However, some or all of these factors may not be controllable and therefore, the Contractor DOES NOT EXPRESS OR IMPLY any warranties or guarantees to the accuracy of the results. The Contractor's sole and exclusive warranty is that the Contractor's instrumentation has the precision necessary to meet NFPA 329 criteria and is an acceptable testing method.

The results of the Contractor's test are only valid under the specific operating conditions of the precision test and only apply to the condition of the underground tank at the time of the test. The Contractor DOES NOT EXPRESS OR IMPLY any past or future responsibility as to the condition of the underground tank system. Furthermore, the Contractor is not responsible for any on-going leakage below the limits of the measurement accuracy of the testing method.

Indemnity:

Company will indemnify, defend, and hold Contractor harmless from any and all loss, damages, suits, penalties, costs, liabilities and expenses (including, but not limited to, reasonable investigation and legal expenses) arising out of any claim for loss of or damage to property, human health or the environment. This limitation of Contractor's liability includes, but is not limited to, no liability for any spills, leaks, or discharges of any substance to the environment and the cost of clean-up, remedial action or any other cost, expense or damage from such spill, leak or discharge.

Notices:

Regulations require that notice be given in the event of a spill or of a failed precision test. In all cases, adherence to this notification requirement is the responsibility of the Company unless the Contractor has written authority from the Company to report such releases. The responsible agency and its telephone number is:

_____

Testing Certificate: This precision testing certificate should be maintained by the owner of the facility for at least five years. The certificate should be displayed in a prominent area near the tank system.

ORIGIN U.S.A.

Precision Testing, as defined by the National Fire Protection Association (NFPA 329), means a test that takes into consideration the temperature coefficient of expansion of the product being tested as related to the temperature change during the test and is capable of detecting a loss of 0.05 gallons per hour in a 12,500 gallon or smaller tank system.

The Criteria established of + or – 0.05 gallons per hour is a mathematical calculation based on actual product volume change and temperature change and is not intended as a permission of a leak.

Testing Conditions:

Tank capacity was supplied by STACK OIL CO.
The coefficient of expansion was determined by AARON ENVIRONMENTAL SPECIALISTS.
The test included the tank and attached piping.

The 3,000 Gallon, Diesel Fuel tank was tested under a hydrostatic pressure of 4.0 psi at tank bottom. The tank system was tested for 1 hour/s after stable conditions were reached. During the period of the test, the change in temperature corresponded to an expected volume change of -.0097 gallons per hour. The actual liquid volume change was -.0079 gallons per hour. The final mathematical result of +.0018 gallons per hour MEETS NFPA 329 criteria.
There was NO water measured inside of the tank.

Recommendations:

The tank and attached piping presently MEETS 22a-449(d)-1 requirements. Send a copy of this certificate to the CT DEP. Retest as specified by local, state and federal requirements.

Disclaimers:

Many factors effect the results of precision testing of underground tanks including, but not limited to, entrapped air-vapor pockets, water table variations, tank-end deflections, product expansion and contraction, wind, evaporation, barometric pressure, etc. Contractor's personnel are trained to understand and, where possible, to adjust for those factors during the performance of a precision test. However, some or all of these factors may not be controllable and therefore, the Contractor DOES NOT EXPRESS OR IMPLY any warranties or guarantees to the accuracy of the results. The Contractor's sole and exclusive warranty is that the Contractor's instrumentation has the precision necessary to meet NFPA 329 criteria and is an acceptable testing method.

Information On Site? ☐

Tank #: 1 Tank ID: D1

Capacity: 2000 Contents: Diesel
Date of Installation: 1/1/1965 Construction Material: Asphalt Coated or Bare Steel
Tank Status: Permanently Out of Double Walled? ☐
If the tank is cathodically protected, is the cathodic protection tested annuall ☐
If the tank is bare steel, does it still contain product? ☐
If the tank is bare steel, and is currently empty, when did it last contain produc

Piping

☐ Fiberglass? ☐ Bare/unprotected steel? ☐ Flexible piping?
☐ Steel clad with manufacturer applied anti-corrosive coating and cathodic protectio
☐ Double-walled?
☐ Records on-site to demonstrate that piping interstitial space is monitored monthly?
Piping Method:
☐ Tank tightness testing conducted annually for pressurized piping
☐ 3-year tightness test conducted for non-exempt suction piping
☐ ATG can detect 0.2 gal/hr leak rate test on pressurized piping with one passing test per mont
☐ Automatic Line Leak Detectors (ALLD) present
☐ Annual maintenance of ALLD documented

Release Prevention

☐ Spill prevention device present ☐ Spill prevention device functional
☐ Automatic shutoff present? ☐ Automatic shutoff operational?
☐ Alarm operational? ☐ Alarm audible or visible to delivery driver
☐ Ball float?

Release Detection

☐ Inventory Control?
- ☐ Daily gauging performed?
- ☐ Weekly reconciliation with water paste test
- ☐ Tank tightness testing conducted? (every 5 years

☐ Double walled interstitial monitoring
- ☐ Records on-site to demonstrate that tank interstitial space is monitored monthl

☐ Automatic Tank Gauging?
- ☐ ATG is operable with indicator lights and alarm functional
- ☐ ATG can detect 0.2 gal/hr leak rate from any portion of the tank routinely containing produc
- ☐ ATG is checking portion of tank that routinely contains product and showing at least one passing test per tank per month on premises?
- ☐ ATG daily gauging performed?
- ☐ ATG inventory/weekly reconciliation?

☐ Groundwater monitoring wells
- ☐ Monitored monthly?

☐ Vapor monitoring wells?
- ☐ Monitored monthly?

☐ Manual tank gauging (<=2000 gallons)
- ☐ 36 hour interval between manual tank gauging
- ☐ Manual tank monthly standard calculation

Hartford, Conn. 06106

SUBJECT: Life Expectancy of Underground Storage Tanks

Pursuant to subsection (h) of the DEP's regulations on Underground Storage Tanks, life expectancy is as follows:

FIBERGLASS REINFORCED PLASTIC - manufacturers' corrosion warranty period.

CATHODICALLY PROTECTED EXTERNALLY COATED STEEL - same as above or calculated anode life.

*** Existing facilities not either of the above - 15 years from date of installation.

On your notification form you failed to indicate the life expectancy for the tank(s) listed below, therefore, we are assuming your life expectancy(s) to be 15 years. If you have documentation that indicates otherwise, please contact us at 566-4630.

Sincerely yours,

Eleanor A. Tewksbury

Dear Mr. Deshefy:

Enclosed are the reults of hydrostatic tests performed at seven of our facilities. The facilities include Danielson Sate Armory, Bristol State Armory, Merdien State Armory, Middletown State Armory, Naugatuck State Armory, Stratford State Armory, and Camp O'Neill.

If you need any questions regarding the enclosed results, please contact me at 524-4937.

Sincerely,

Elizabeth F. Doran
State Environmental Specialist

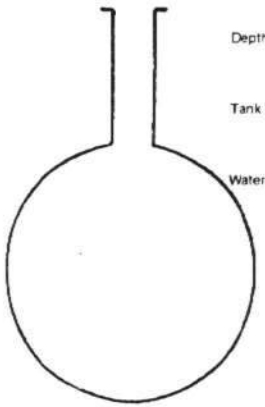
Use maximum allowable test pressure for all tests.
Four pound rule does not apply to doublewalled tanks.

Complete section below.

1. Is four pound rule required? Yes ☒ No ☐
2. Height to 12" mark from bottom of tank 129 in.
3. Pressure at bottom of tank 4 P.S.I.
4. Pressure at top of tank 1.7 P.S.I.



Depth of burial 90 in.
Tank dia 72 in.
Water table — in.

NOTES:

The above calculations are to be used for dry soil conditions to establish a positive pressure advantage, or when using the four pound rule to compensate for the presence of subsurface water in the tank area.

Refer to N.F.P.A. 30, Sections 2-3.2.4 and 2-7.2 and the tank manufacturer regarding allowable system test pressures.

19. TANK MEASUREMENTS FOR TSTT ASSEMBLY

Bottom of tank to grade* 90 in.
Add 30" for "T" probe assy 30 in.
Total tubing to assemble – approximate 120 in.

20. EXTENSION HOSE SETTING

Tank top to grade* 18 in.
Extend hose on suction tube 6" or more below tank top 24 in.

*If Fill pipe extends above grade, use top of fill.

22. Thermal-Sensor reading after circulation ____ digits
____ °F Between
23. Digits per °F in range of expected change ____ digits

COEFFICIENT OF EXPANSION (Complete after circulation)

24a. Corrected A.P.I. Gravity
Observed A.P.I. Gravity NA
Hydrometer employed ____ H
Observed Sample Temperature ____ °F
Corrected A.P.I. Gravity @ 60°F, From Table A ____
Coefficient of Expansion for Involved Product From Table B ____
Transfer COE to Line 25b

21. VAPOR RECOVERY SYSTEM ☐ Stage I ☐ Stage II

24b. COEFFICIENT OF EXPANSION RECIPROCAL METHOD

Type of Product #201
Hydrometer Employed 4 H
Temperature in Tank After Circulation ____ °F
Temperature of Sample ____ °F
Difference (+/-) ____ °F
Observed A.P.I. Gravity ____
Reciprocal ____ Page # ____

____ + ____ = ____
Total quantity in full tank (16 or 17) — Reciprocal — Volume change in this tank per °F
Transfer to Line 26a

24c. FOR TESTING WITH WATER see Table C & D

Water Temperature after Circulation Table C NA °F
Coefficient of Water Table D ____
Added Surfactant? ☐ Yes ☐ No Transfer COE to Line 25b

25. (a) NA Total quantity in full tank (16 or 17) × (b) ____ Coefficient of expansion for involved product = (c) ____ Volume change in this tank per °F gallons

26. (a) Aborted Attempt! Refer to next copied sheet! This is Volume change per °F (25 or 24b) — Digits per °F in test — Volume change per digit — test

Attempted to Fill Standpipe Above 42" For circulation.

Unable to keep liquid level in Standpipe; system could not hold pressure.

Aborted Attempt!

Monitored product level in Standpipe - Held at 25" in the Fill pipe.

P-T Tank Test Data Chart
Additional Info

1. Net Volume Change at Conclusion of Precision Test — gph

Signature of Tester: M Noble

Date: 10/26/88

2. Statement:

☐ Tank and product handling system has been tested tight according to the Precision Test Criteria as established by N.F.P.A. publication 329. This is not intended to indicate permission of a leak.

OR

☒ Tank and product handling system has failed the tank tightness test according to the Precision Test Criteria as established by N.F.P.A. publication 329.

It is the responsibility of the owner and/or operator of this system to immediately advise state and local authorities of any implied hazard and the possibility of any reportable pollution to the environment as a result of the indicated failure of this system. Heath Consultants Incorporated does not assume any responsibility or liability for any loss of product to the environment.

STATE OF CONNECTICUT
DEPARTMENT OF ENVIRONMENTAL PROTECTION

64- 9013
NATIONAL GUARD ARMORY
360 BROAD ST.
HARTFORD CT 06105
Re. Maxim Road

Dear UST owner/operator:

The following questionnaire should be completed as part of a joint state and federal compliance monitoring project. Please answer as accurately as possible all of the following which pertains to your particular UST site. Please be advised that the information herein provided will be compared with those data currently maintained as part of the Connecticut DEP/ Federal Environmental Protection Agency data management system. Please make as many copies of this form as needed.

1) If you own **ONLY** heating fuel tanks for on-site consumptive use, please check here and return this letter. ☐

2) How many UST(s) are in service at this site in total (including heating fuel tanks for on-site consumptive use)? 3
How many are heating fuel tanks? 1

Heating fuel tanks used for on-site consumption only are exempt from the rest of this survey.
Use one row vertically for each tank /container that is part of the facility being reported.

3) What are the tank I.D.'s ? (as previously registered with CT DEP and EPA)	B1	C2R1		
4) What was the date of installation for each of your tanks?	1/85	12/89		
5) What do these tanks contain? C=hazardous materials G=gasoline, D=diesel fuel, W=waste oil	G	D		
6) What is the total capacity of these tanks (in gallons)?	2,000	3,000		
7) What type of UST(s) do you have? F= fiberglass, S=Steel, C= steel clad and cathodic protection O=other (please explain)	S	S		
8) Which of the following leak detection options are being used? a) inventory control (gauging / weekly reconciliation with water paste test) and annual failure determination b) double walled UST-interstitial monitoring c) automatic tank gauging (eg. Veeder root system) d) approved installation and monthly monitoring of ground water wells e) approved installation and monthly monitoring of "vapor sniffing" wells f) Manual tank gauging as defined in 22a-449(d)-104(e)2 for UST systems ≤ 2000 gallons	C	C		
9) Do you have pressurized piping or suction piping? P = pressurized; S = suction	S	S		

(Tank ID's continued)

10) Do you perform release detection on piping? N
What kind and when?

UST systems **MUST** be upgraded accordingly or closed (including environmental sampling survey and remediation, if necessary) prior to December 22, 1998. For questions 11,12, and 13, please put a 'P' for upgrades that have already been made and an 'F' for upgrades to be made prior to the 1998 deadline. (Please include projected date of compliance. eg., 11/97)

11) Spill protection provided by a catchment basin **AND** overfill protection provided by an automatic shutoff overfill alarm, or ball float valve (See UST Regulations Sec.22a-449(d)-102(a)(5))	P	P		
12) Corrosion protection for the tank and piping provided by: a) steel tank has corrosion resistant coating and cathodic protection	P	P		
b) tank made of noncorrodible material (such as fiberglass) (See UST Regulations Sec. 22a-449(d)-102(a)(10))				
13) Corrosion protection for piping provided by: steel piping with a corrosion-resistant coating and cathodic protection (See UST Regulations Sec. 22a-449(d)-102(a)(10))	P	P		

14) Will you be or are you now in compliance with the December 1998 federal and state deadline for spill, overfill, and corrosion protection? YES ☒ NO ☐

*If you decide not to upgrade your existing UST system with the items above, you **MUST** properly close the UST system. If you subsequently install a new UST system, the new installation must meet all the regulatory requirements for installations after December 22, 1998.*
Failure to legally upgrade or to close applicable UST systems (including submission of closure reports with sampling data) will be viewed as a serious violation of State and Federal environmental law.

Dear Mr. Purple:

The Connecticut Military Department would like to submit the attached form EPHM-6 to the Connecticut Department of Environmental Protection, UST Program. Tanks A1R1, B1 and C2R1 were removed in September of 1998. USTs B1 and C2R1 were replaced with a 4,000-gallon Aboveground Storage Tank (AST) which dispenses diesel fuel. UST A1R1 was removed and replaced by pipeline fed natural gas.

Any questions can be addressed to the undersigned or Larry Fritch at (860) 524-4990.

Thank you for your assistance.

Sincerely:

for RALPH F. HEDENBERG

Planning and Coordination
18-20 Trinity Street, Hartford, Connecticut

From: Philip G. Wilde, Field Inspector II
Department of Environmental Protection
Hazardous Materials Mgmt/Unit Underground Storage Tank Group
122 Washington Street, Hartford, Connecticut

Date: April 13, 1989

Telephone: 566-4630

Subject: Brainard Airport

I have enclosed a copy of the Underground Storage Tank Notification information that we currently have on file for Brainard Airport. Note that there are a total of seven (7) USTs registered by three (3) separate facility owners. We do not know if there are any unregistered USTs at the airport. This notification information indicates that Tanks D-1 and W-1 at the Airport Headquarters will be due for removal (or permanent closure) by September 1, 1989. Tank R-1 at the Airport Headquarters is required to have a hydrostatic failure determination test in 1989, and annually thereafter through 1997 when permanent closure will be required. Tank 2 at the Organizational Maintenance Shop No. 7 (installed 6/74) was due for a hydrostatic failure determination testing by November 1, 1988, and is required to be tested annually through 1994, and then permanently closed. Tank 1-X, owned by Charter Oak Aviation, was supposedly tested during August, 1988. We do not have these results in our files, but we will request them. Tank 1-X must be annually tested through the year 1993, and then permanently closed.

Please feel free to contact me if you need any additional information concerning Brainard Airport. I have enclosed a copy of Section 22a-449(d)-1 of the Regulations of Connecticut State Agencies for your information.

Philip G. Wilde.

COMMENTS: _____

Ullage - the space in the tank between the liquid level and tank top, expressed in gallons.
Water Threshold - is an increase of more than 0.10 gallons per hour.
Water Result - actual increase in gallons per hour during testing.
Pressure Treshold - is 10% of the minimum determined pressure expressed water column inches per hour.
Pressure Result - actual loss of water column inches over a one hour period.
Conclusion - is based on EPA performance standards as outlined in 40 CFR 280.

State Military Dept.
Location; Brainard Field Armory

1. All tanks meet the criteria for adequate corrosion protection.
2. Vent for oil tank is fiberglass with galvanized steel riser.
3. Product piping is galvanized steel, and doesn't meet the criteria for adequate corrosion protection. (gas and diesel only)
4. Product piping for oil tank is copper lines with secondary piping.

Annual Line and Line Leak Detector Testing

Dear Mr. Konefal:

This cover letter summarizes the results of the test(s) performed at the subject site. The test results and data sheets are attached.

Test Summary Tests performed on December 3, 2010	
Test Performed	**Test Result**
Precision Line Tightness	
Gasoline	Pass (Acurite Pipeline test method)
Diesel	Pass (Acurite Pipeline test method)
Mechanical Line Leak Detector	
Gasoline (Red Jacket XL)	Fail
Gasoline (Red Jacket FX2V)	Pass (Ser# 10610 2883)
Diesel (Red Jacket XL)	Fail
Diesel (Red Jacket FX2DV)	Pass (Ser# 10610 2883)

Limitations

The test conclusions are valid only at the time the test(s) are conducted and for the specific operating conditions described in each test method. AARON Environmental does not express or imply any past or future responsibility as the condition of the tank system and or its components. Furthermore, AARON Environmental is not responsible for any on-going leakage of the underground storage tank systems below the limits of the accuracy of the test method(s) used.

Record Keeping – Underground Storage Tanks

Owners and operators shall keep and maintain test reports as required by Connecticut Department of Environmental Protection RSCA Section 22a-449-(d)-103 for a period not less than (5) years beyond the operational life of a UST system (a) at the UST site immediately available for inspection by the implementing agency; or, (b) for records greater than five (5) years old or with prior written approval by the commissioner at a readily available site and be immediately provided for inspection to the implementing agency upon request.

Thank you for the opportunity to provide these services, AARON Environmental (AARON) appreciates your business. Any questions or comments regarding this report should be forwarded to our Petroleum Services office at 860-276-1201

Sincerely,

Jesse V. Bracken
Project Manager

Correspondence

Date Issued:	Date Recd:	Correspondence Type
3/26/1999	4/7/1999	Tank Closure Assessment Report

Statewide UST Program, DPW Project No. B1-2B-760-B335 (A. Foss and A. Zlotnick) Fuss & O'Neill: Removal of a 2,000-gallon gasoline, a 3,000-gallon diesel, and a 5,000-gallon heating oil USTs. No impact was found to the soils of the diesel and gasoline UST graves. The heatin oil UST grave had impacted soils that were removed from site. Confirmation soil samples still showed COCs above action levels.

Correspondence

Date Issued:	Date Recd:	Correspondence Type
8/1/1988	8/1/1988	Spill Report

Spill Report 88-3422 states that a 1k diesel failed tightness test on 8/1/88, tank 31 years old, tank pumped out.

Docs:

3/19/1990	3/19/1990	Spill Report

Spill Report 90-843 states that gasoline was detected in soil half-way down access road toward control tower. LUST removed.

Docs:

7/28/1992	7/22/1992	Spill Report

Spill Report 92-3801 states that a 2k diesel and a 2k #2FO LUSTs were removed.

Docs:

12/23/1993	12/28/1993	Spill Report

Spill Report 93-7162 states that a 1.5k JP-4 UST and 10-20yds3 of contaminated soil were removed. Graves need to be cleaned further before closure.

Docs:

3/19/1990	3/19/1990	UST Notification

According to the LUST master list 10 jet fuel LUSTs (4x10k and 6x4k, A2 - A10) and contaminated soil were removed from the subject facility on 3/19/90.

Docs:

5/4/1990	5/4/1990	Correspondence

One piece of correspondence from OCSRD files received on 5/4/90 is a letter from DOT asking for DEP to arrange disposal of 1700 yd3 of contaminated soil stockpiled at site

Docs:

		Spill Report

Spill Report 90-843 states that gasoline was detected in soil half-way down access road toward control tower. LUST removed.

Docs:

10/25/1988	10/25/1988	LUST Master List

According to the LUST Master List 1x10k and 1x4k diesel fuel USTs and contaminated soil were removed from the subject facility on 10/25/88.

Docs:

9/28/1990	9/28/1990	Correspondence

One piece of correspondence from OCSRD files received on 9/28/90 from Metcalf and Eddy of Meriden CT, is a fax to CT-DEP OCSRD, with analytical results from soil samples. Site map is also included.

Docs:

7/25/1992	7/25/1992	Spill Report

Spill Report 92-3801 states that a 2k diesel and a 2k #2FO LUSTs were removed from the subject facility.

STATE OF CONNECTICUT
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Request for Information

To: STATE MILITARY DEPARTMENT (CFMO ENV) SITE ID#64-5985
OR CURRENT UST OWNER OR OPERATOR
ORGANIZATIONAL MAINTENANCE SHOP 7
BRAINARD AIRPORT
HARTFORD, CT 06145

The Department of Environmental Protection records of underground storage tank registrations indicate that an underground storage tank system (UST) either operated or on property owned by you may be in violation of the laws and regulations governing such systems. We are seeking your immediate assistance to correct any discrepancies between our database and the actual status of such UST(s).

Specifically, our records indicate that you may have failed to comply with Section 22a-449(d)-1 and Sections 22a-449(d)-101-113 of the Regulations of Connecticut State Agencies by:

1. Failure to permanently close (through removal or in-place abandonment) an underground storage tank system which has already exceeded its fifteen (15) year life expectancy, plus five (5) years; or

2. Failure to report the removal of an underground storage system on the prescribed form EPHM-6 within thirty (30) days following completion of the removal project ; or

3. Failure to perform the requisite subsurface assessment at the time of closure of an underground storage tank system.

If you have permanently closed the UST(s), you should submit in writing within thirty (30) days to the UST Enforcement Program verification of that closure as prescribed by the regulations. An addressed envelope is enclosed for your convenience. If you fail to submit information, the Department will presume that our records are correct and that UST(s) operated or owned by you are in violation of the law.

For your further information, please remember that in addition to the reporting requirements, certain commercial tanks must meet the upgrading requirements for tanks and piping, spill and overfill prevention equipment and release detection equipment no later than December 22, 1998 as required by state and federal laws.

Should you have any questions regarding the status of your UST(s) or the Department's records, please contact the **Underground Storage Tank Program** at **(860) 424-3374** between 8:30 A.M. and 4:30 P.M.

Sincerely,

G. Scott Deshefy

From: Philip G. Wilde, Field Inspector II
Department of Environmental Protection
Hazardous Materials Mgmt/Unit Underground Storage Tank Group
122 Washington Street, Hartford, Connecticut

Date: April 13, 1989

Telephone: 566-4630

Subject: Brainard Airport

I have enclosed a copy of the Underground Storage Tank Notification information that we currently have on file for Brainard Airport. Note that there are a total of seven (7) USTs registered by three (3) separate facility owners. We do not know if there are any unregistered USTs at the airport. This notification information indicates that Tanks D-1 and W-1 at the Airport Headquarters will be due for removal (or permanent closure) by September 1, 1989. Tank R-1 at the Airport Headquarters is required to have a hydrostatic failure determination test in 1989, and annually thereafter through 1997 when permanent closure will be required. Tank 2 at the Organizational Maintenance Shop No. 7 (installed 6/74) was due for a hydrostatic failure determination testing by November 1, 1988, and is required to be tested annually through 1994, and then permanently closed. Tank 1-X, owned by Charter Oak Aviation, was supposedly tested during August, 1988. We do not have these results in our files, but we will request them. Tank 1-X must be annually tested through the year 1993, and then permanently closed.

Please feel free to contact me if you need any additional information concerning Brainard Airport. I have enclosed a copy of Section 22a-449(d)-1 of the Regulations of Connecticut State Agencies for your information.

18. SPECIAL CONDITIONS AND PROCEDURES TO TEST THIS TANK

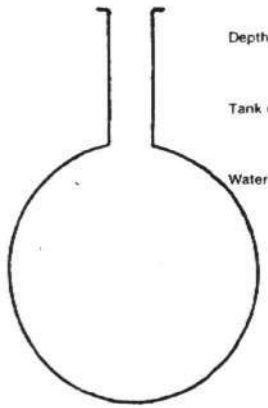
☐ Water in tank ☐ Line(s) being tested with LVLLT ☐ High water table in tank excavation

See manual sections applicable. Check below and record procedure in log (27).

Use maximum allowable test pressure for all tests.
Four pound rule does not apply to doublewalled tanks.

Complete section below:

1. Is four pound rule required? Yes ☒ No ☐
2. Height to 12" mark from bottom of tank 129 in.
3. Pressure at bottom of tank 4 P.S.I.
4. Pressure at top of tank 2,015 P.S.I.



Depth of burial 99 in.

Tank dia. 64 in.

Water table — in.

NOTES:

41.031

129 30

The above calculations are to be used for dry soil conditions to establish a positive pressure advantage, or when using the four pound rule to compensate for the presence of subsurface water in the tank area.

Refer to N.F.P.A. 30, Sections 2-3.2.4 and 2-7.2 and the tank manufacturer regarding allowable system test pressures.

19. TANK MEASUREMENTS FOR TSTT ASSEMBLY

Bottom of tank to grade* 99 in.

Add 30" for "T" probe assy. 30 in.

Total tubing to assemble — approximate 129 in.

20. EXTENSION HOSE SETTING

Tank top to grade* 35 in.

Extend hose on suction tube 6" or more below tank top 41 in.

*If Fill pipe extends above grade, use top of fill.

Information On Site?	☐		

Tank #: 1 Tank ID: A1

Capacity:	2500	Contents:	Gasoline
Date of Installation:	6/1/1974	Construction Material:	Bare Steel
Tank Status:	Removed	Double Walled?	☐

If the tank is cathodically protected, Is the cathodic protection tested annuall ☐
If the tank is bare steel, does it still contain product? ☐
If the tank is bare steel, and is currently empty, when did it last contain produc

Piping

☐ Fiberglass? ☐ Bare/unprotected steel? ☐ Flexible piping?
☐ Steel clad with manufacturer applied anti-corrosive coating and cathodic protectio
☐ Double-walled?
☐ Records on-site to demonstrate that piping interstitial space is monitored monthly?

Piping Method:

☐ Tank tightness testing conducted annually for pressurized piping
☐ 3-year tightness test conducted for non-exempt suction piping
☐ ATG can detect 0.2 gal/hr leak rate test on pressurized piping with one passing test per mont
☐ Automatic Line Leak Detectors (ALLD) present
☐ Annual maintenance of ALLD documented

Release Prevention

☐ Spill prevention device present
☐ Automatic shutoff present?
☐ Alarm operational?
☐ Ball float?
☐ Spill prevention device functional
☐ Automatic shutoff operational?
☐ Alarm audible or visible to delivery driver

Release Detection

☐ Inventory Control?
- ☐ Daily gauging performed?
- ☐ Weekly reconciliation with water paste test
- ☐ Tank tightness testing conducted? (every 5 years

☐ Double walled interstitial monitoring
- ☐ Records on-site to demonstrate that tank interstitial space is monitored monthl

☐ Automatic Tank Gauging?
- ☐ ATG is operable with indicator lights and alarm functional
- ☐ ATG can detect 0.2 gal/hr leak rate from any portion of the tank routinely containing produc
- ☐ ATG is checking portion of tank that routinely contains product and showing at least one passing test per tank per month on premises?
- ☐ ATG daily gauging performed?
- ☐ ATG inventory/weekly reconciliation?

☐ Groundwater monitoring wells
- ☐ Monitored monthly?

☐ Vapor monitoring wells
- ☐ Monitored monthly?

☐ Manual tank gauging (<=2000 gallons)
- ☐ 36 hour interval between manual tank gauging
- ☐ Manual tank monthly standard calculation

RE: Spill # 2005-2334
Atlantic Aviation Services
20 Lindberg Drive
Hartford, CT 06114

Dear Oil & Chemical Spills:

Madison Environmental Group, Inc. (Madison) on behalf of Atlantic Aviation Services (Atlantic Aviation) is providing the Connecticut Department of Environmental Protection (CT-DEP) with a summary of the response actions associated with the above referenced spill incident.

On 21 April 2005, Madison responded to an incident that was reported to the CT-DEP by the Department of Transportation (DOT). The incident occurred on the main aircraft ramp east of the Atlantic Aviation General Aviation facility at the Hartford Airport (Figure 1).

At the time of initial release, preliminary response actions were undertaken; however, due to inclement weather conditions final remedial actions were completed in April.

Utility Clearance

The impacted area adjacent to the aircraft ramp where the incident occurred was approximately 8-feet by 30-feet. Prior to excavating the impacted soils, the DOT provided utility clearance for the site. Within minutes of starting the excavation, utility lines were encountered in the excavation. The excavation efforts ceased until Mr. Milano, Airport Manager for the DOT, further cleared the utility lines. Mr. Milano later advised that the lines encountered earlier in the excavation area powered a set of wind socks for the airport. Mr. Milano subsequently instructed Atlantic Aviation to continuing digging. A second set of utility lines were encountered in the excavation discovered. Excavation efforts again ceased until Mr. Milano later determined the lines were inactive.

Madison Environmental Group
8A Porter Rd. Boxford, MA. 01921 • 978.352.5086 office • 978.352.5059 fax
sarah.smith@prodigy.net

Soil Excavation

The excavation efforts were guided through on-site Total Petroleum Hydrocarbons (TPH) analyses via Petroflag® test kits. To determine the vertical extent of the impact, a test pit was completed in the center of the impacted area. The sidewall sample collected from approximately 6-feet below grade contained 108 parts per million (ppm) of TPH, which is less than the 2,500 ppm Pollutant Mobility Criteria for GB classified areas and less than the 500 ppm Residential Direct Exposure Criteria as established by the DEP.

Once the impacted soils were removed, confirmatory Petroflag analyses were completed on soil samples collected from the extents of the excavation. PetroFlag results ranged from non-detect (<10 ppm) to 836 ppm. The area which contained the sidewall sample containing the 836 ppm was further excavated and resampled. Subsequent sampling indicated that the TPH impacted soils were removed. Figure 2 details the extent of the excavation and the results of the Petroflag tests.

Soil Disposal and Backfill

Soils excavated were placed directly into a truck in order to stage the soils on Atlantic Aviations leasehold and away from airport operations. Once the excavation was complete, the soils were placed on and later covered with a polyethylene sheathing material.

Soil samples were collected from the stockpile for disposal characteristic analyses. On 05 May, 51.38 tons of soil was transported to Phoenix Soils, LLC in Waterbury, Connecticut for disposal. Attached are the manifests and weigh tickets for the disposal.

On 22 April, the excavation was backfilled with clean backfill material to the maximum extent possible while leaving access to the damaged utilities, which Mr. Milano indicated he would later have repaired by a licensed electrician.

Based on the remedial actions taken and the endpoint analytical samples no further activities are planned for this site.

If you should have any questions concerning the response to this incident, please contact our office.

Sincerely,

Sarah Smith
President
Madison Environmental Group

~~#~~ Called again @ 1249 hrs representing Sgt Russian Hartford Police Dept - 527-6300 x 640 regarding the same problem - I advised him that C.S.P. - TpH. Truck personnel advised and enroute to site - E.T.A. 1300-1315 hrs - (TPR coming out of Middletown)
D.B. 9-7-84

Conclusion: since trailers are empty - no violation

STATE OF CONNECTICUT
DEPARTMENT OF ENVIRONMENTAL PROTECTION

STATE OFFICE BUILDING HARTFORD, CONNECTICUT 06115

November 18, 1975

TO: Russell C. Dibble
Chief Field Inspector

FROM: Donald Burton, Jr.
Field Inspector

SUBJECT: Hartford - Reported Sheen on Connecticut River

The writer was dispatched at 1400 hours, September 15, 1975 to the dike area of Hartford in the Brainard Field area to investigate a report of an oil sheen on the Connecticut River.

Arriving at the site the writer proceeded to climb the dike and survey an area of the river at the north end of Brainard Field. No oil was evidenced on the river from this point so the writer descended the dike to the rivers edge. Seeing no oil, the writer walked along the river bank for a distance of 50 to 75 yards. Seeing no evidence of oil in this area the writer returned to his vehicle and proceeded southward along the river to a point to the rear of the sewage treatment facility, City of Hartford, where access to the river was obtained. Viewing the river from this area, the writer again saw no evidence of oil. Returning to this vehicle the writer was directed to check the river at the Route 190 Bridge in Suffield. The writer was also advised to meet David Cherico enroute.

Arriving at the Route 190 Bridge the two (2) Field Inspectors found no evidence of oil at this point. The writer was then directed to check the river again in Wethersfield.

Again, checking the river in Wethersfield, the writer found no evidence of a sheen of oil. With this completed, the writer left the site.

On September 17, 1975 at 0830 hours the writer again checked the river in Suffield, and found no evidence of oil.

Donald Burton, Jr.
Field Inspector

NOTICE OF VIOLATION

To: Ct Dot/BAP/Brainard Airport
251 Maxim Road
Hartford, CT 06114

Permit Number GSW000662
DEP/WPC Number: 064/256

The purpose of this Notice is to inform you that the Department of Environmental Protection has determined the following violation of law:

1. On November 28, 1992 your facility registered for the General Permit for the Discharge of Stormwater Associated with Industrial Activities, issued October 1, 1992, modified October 1, 1995. You have failed to submit stormwater monitoring results per Part VI.C.3.a. of the Stormwater General Permit.

If you have performed your monitoring, you should submit your Stormwater Monitoring Report (SMR) within thirty (30) days with the enclosed Compliance Statement. All monitoring required by the permit is important. Therefore, for those that failed to complete the monitoring, your should within thirty (30) days submit the enclosed compliance statement, noting arrangements to sample prior to October 1, 1997 for the 1997 sampling year, and arrangements for an additional sample within ninety (90) days of the date of this NOV. Please note that while taking this additional sample does not dismiss your violation for 1996, DEP will take such sampling into consideration when considering formal enforcement action. The Compliance Statement and the SMR (if complete) should be **sent to Julie Shane Kiritsis at the address identified below in paragraph D with a copy of the Compliance Statement and SMR directed to Michael Fedak of the Environmental Protection Agency ("the EPA") at the address given below in paragraph E.** Until the DEP has received such statement, the DEP will presume you remain in violation. Your actions in response to this notice, including submission of the Attached Compliance Statement, may effect the DEP's decision whether or not to take formal enforcement action.

A. Other violations may exist; legal obligations. This Notice does not necessarily specify all violations of Connecticut environmental law or violations of any other legal requirements which may exist at the aforementioned facility. This Notice does not preclude the DEP or other state, local or federal agencies from commencing enforcement action regarding any such violations. Your facility may be inspected pursuant to law and without additional prior notice to determine compliance with state and any applicable federal law. It is your responsibility to comply with all legal requirements, whether or not the DEP notifies you of any violations or takes any enforcement action against you. Nothing in this Notice relieves you of other obligations under applicable federal, state and local law.

B. Enforcement action. Civil penalties of up to $25,000 may be assessed for each day of each violation under section 22a-438 of the Connecticut General Statutes. Notwithstanding the issuance of this Notice, the DEP may seek such penalties and may issue an order, seek an injunction, or take other legal action under Chapters 439 and 446k of the Connecticut General Statutes.

C. No assurance by Commissioner. No provision of this Notice and no action or inaction by the Commissioner shall be construed to constitute an assurance by the Commissioner that actions you may take to address the violation alleged herein will result in compliance.

D. Staff contact. If you question any of the information contained in this Notice, you may contact Julie Shane Kiritsis of the Bureau of Water Management Stormwater Section at (860) 424-3018, 79 Elm Street, Hartford, CT 06106. You may also contact Christopher Stone of the Bureau of Water Management Stormwater Section at (860) 424-3018 or Carol Papp of the Bureau of Water Management Water Toxics Program at (860) 424-3908.

E. EPA contact. Michael Fedak, U.S. E.P.A. New England, Office of Environmental Stewardship (SEW), JFK Building, Boston, MA 02203.

COMPLIANCE STATEMENT

This Compliance Statement shall be signed by: (1) You (if an individual - the individual signs); (if a corporation or partnership - by a responsible corporate officer/general partner or a duly authorized representative of such person, as those terms are defined in section 22a-430-3(b)(2) of the Regulations of Connecticut State Agencies); or (if a municipality - chief elected official or principal executive officer) **and** (2) if different, by the individual responsible for actually preparing such statement, each of whom shall read and sign the certification regarding false statements on the Compliance Statement.

Within fifteen days of the date you become aware of a change in any information in the Compliance Statement, or that any information was inaccurate or misleading or that any relevant information was omitted, submit the correct or omitted information to the DEP and EPA staff contacts identified in the Notice of Violation.

Notice of Violation Issuance Date: April 30, 1997
Facility Name and Address: _____
_____
_____
_____

In accordance with the directions in the above-referenced Notice of Violation, I certify that the noted violations will be corrected or addressed in the following manner:

◊ Enclosed is a copy of the Stormwater Monitoring Report *(attach copy)*.

◊ An additional sample will be taken by _____ *(insert date)*. An SMR will be submitted by _____ *(insert date.)* I understand that this does not dismiss my violation for 1996, but will be taken into consideration by DEP when considering formal enforcement action.

◊ Sampling for the 1997 monitoring year will be completed by October 1, 1997, and the results submitted by December 31, 1997.

Certification of Accuracy

I certify that the information in this Compliance Statement and any attachments thereto are true, accurate and complete, and I understand that any false statement may be punishable as a criminal offense under Connecticut General Statutes 22a-6 and 53a-157.

I. Introduction

The State of Connecticut Department of Administrative Services, Bureau of Public Works, Energy Management Section, has been assigned by the Governor the responsibility of identifying the presence and extent of asbestos-containing materials in state-owned/leased buildings, and to estimate the cost of corrective measures. The Department of Health Services, Bureau of Health Promotion, is providing Co-Direction including Quality Assurance and other technical support to DAS/BPW for this program.

Versar Risk Management Inc. was retained by the Bureau of Public Works (Contract No. 86-1161) to perform inspections on approximately five hundred-sixty State buildings.

These inspections will provide the State of Connecticut with detailed information concerning the quantity and condition of any asbestos containing materials identified in these buildings. Estimations of environmental risk and the cost of remedial alternatives are included within each report.

This report summarizes the asbestos survey conducted in the Brainard Airport Administration Building, Hartford, Connecticut. The report is organized as follows:

Section II	- Summary of Findings
Section III	- Narrative Detailing Findings
Section IV	- Numerical Exposure Assessments
Section V	- Asbestos Abatement Cost Estimate
Section VI	- Asbestos Survey of State Building
Section VII	- State Building Survey Profile
Section VIII	- Sampling Report
Section IX	- Laboratory Reports
Section X	- Diagrams of Asbestos Sample Locations

Versar INC.

II. SUMMARY

SITE: BRAINARD AIRPORT ADMINISTRATION
ADDRESS: MAXIM ROAD
HARTFORD, CONNECTICUT

INSPECTOR: D. NELSON
DATE OF INSPECTION: 10 / 21 / 86
TIME IN/OUT: 1515 - 1630

AGENCY RESPONSIBLE FOR BUILDING: DEPARTMENT OF TRANSPORTATION

FACILITY CONTACT PERSON: ROBERT CARRIER

FACILITY ESCORT: ROBERT CARRIER

PRIMARY USE OF BUILDING: OFFICE BUILDING

OCCUPANCY OF BUILDING: 25 Daily

ASBESTOS CONTAINING MATERIALS PRESENT: Yes

AMOUNT OF ASBESTOS
CONTAINING MATERIAL DETECTED: 6 sq ft of 3" diameter pipe insulation

MATERIAL FRIABLE: 6 sq.ft. MATERIAL NON FRIABLE: 0 sq.ft.

IDENTITY OF ASBESTOS MANUFACTURER (if possible): N/A

MATERIAL CONDITIONS/REMARKS:

Building recently renovated. Small amount of "air cell" pipe insulation found between wall in basement left over from those renovations.

Versar INC.

III. NARRATIVE

The following section details the findings of the asbestos survey conducted at the Brainard Airport Administration Building. This facility provides office space for airport officials.

FINDINGS

Basement Stockroom: Three inch diameter air cell pipe insulation was discovered and sampled (BAA-1-B) from behind the east wall. The material on eight linear feet of pipe was determined to contain 40-45% Chrysotile asbestos. This pipe insulation most probably was leftover from renovation activities. Access is very limited to maintenance personnel only. Moderate damage was observed as some of the material was disturbed, but not removed during renovation.

No other areas in the Brainard Airport Administration Building were found to contain suspect friable materials.

SUMMARY

Asbestos-containing materials were detected in the following area(s):

Location	Description	Amount	Condition
Basement Stockroom	3" diameter air cell pipe insulation	8 linear feet	moderate damage

It is recommended that removal of asbestos-containing materials be undertaken to eliminate the potential exposure to asbestos fibers. In the interim, materials should be inspected on a regular basis to note any changes in their condition.

IV. ASBESTOS EXPOSURE ASSESSMENT FACTOR SCORES

Factor	Range and Extent	Score
1. Material Condition (Deterioration/ Damage)	None	0
	Moderate; small areas 10% or less damage.	2
	Widespread; severe; pieces dislodged, greater than 10%	5
2. Water Damage	None	0
	Minor; 10% or less.	1
	Moderate to major; greater than 10%	2
3. Exposed Surface Area	Not exposed; located above suspended ceiling; No air plenum; None visible without removing panels or ceiling sections.	0
	10% or less of the material is exposed.	1
	10% to 100% of the material is exposed or if above suspended ceiling, is an air plenum.	4
4. Accessibility	Not accessible.	0
	Low; Rarely accessible.	1
	Moderate to high; Access may be frequent.	4
5. Activity and Movement	None or low; Quiet and non-destructive population.	0
	Moderate; Activity may create undue vibration.	1
	High; Occupants vandalous or disruptive, high vibration area.	2
6. Air Plenum or Direct Air Streams	None	0
	Present	1
7. Friability	Not friable.	0
	Low friability; Difficult but possible to damage by hand.	1
	Moderate friability; Fairly easy to dislodge or crush.	2
	Highly friable; fluffy, spongy, flaking, pieces hanging; falls apart when touched.	3
8. Asbestos Content (total % present)	Trace to 1%	0
	1% to 50%	2
	50% to 100%	3

Additional Comments and/or Illustrations:

V. ESTIMATED COSTS FOR ASBESTOS ABATEMENT

Developing and implementing an effective strategy to correct asbestos exposure problems requires information on the applicability and relative costs of alternative control measures. The two forms of control are material removal and material encapsulation. The information and recommendations presented in this report are based upon the inspection conducted by Versar Risk Management staff, information provided by facility escort Mr. Robert Carrier, and the judgement of the VRM inspector.

According to EPA guidelines, material removal is recommended in most situations and encapsulation of friable material is not advisable. However, encapsulation can be effectively used for areas where removal is virtually impossible, such as areas with complex surfaces and over "trowelled-on" or "cementitious" materials.

The recommended abatement procedure for this building is removal of the asbestos and replacement with other insulating materials. The estimated cost for this work is $216. It should be understood that the cost presented herein is an estimate only. It is very difficult to accurately estimate asbestos abatement costs. Asbestos abatement work is still a relatively new and evolving construction trade. Lack of contractor confidence or construction standards and escalating insurance protection and disposal costs produce erratic if often high bids.

There are many factors that complicate asbestos abatement estimates; therefore, a conservative estimate has been prepared.

Based on input from the State of Connecticut Bureau of Public Works, Energy Management Section, the following escalation and markup factors were added into the final cost estimation:

Versar INC.

Profit and Overhead @ 15%
General Contractor Markup @ 10%
Engineering @ 20-25%
Contingency @ 15%

REMOVAL/REINSULATION COST ESTIMATION

Location	Description	Quantity	Unit Price	Total Cost
Basement Stockroom	Removal of pipe insulation	6 sq.ft.	6.00	36
	Reinsulation of pipe	6 sq.ft.	12.00	72
	Poly enclosure	30 sq.ft.	0.72	22
			Total	$ 130

I. PROJECT NARRATIVE

Overview

On October 10 and 11, 2001, state-licensed inspectors from EnviroMed Services, Inc. (EnviroMed) performed an inspection at the Department of Transportation facility – Brainard Airport Fire Hanger Building (#85-002) and Crash Unit Building (#85-004), located on Brainard Road, Hartford, Connecticut. The purpose of this inspection was to identify the presence of asbestos in suspect building materials, so that any asbestos-containing material could be identified prior to periodic maintenance or renovation.

Samples were collected according to 40 CFR Part 763.86 and 29 CFR Part 1926.1101, and analyzed using Polarized Light Microscopy (PLM).

A total of forty eight (48) bulk samples were collected from the Fire Hanger Building (#85-002). The materials sampled include: 9"x9" light tan vinyl floor tile and mastic, 9"x9" brown vinyl floor tile and mastic, 12"x12" tan vinyl floor tile and mastic, 12"x12" tan with dark brown vinyl floor tile and mastic, 4" cream cove molding and associated glue, 4" brown cove molding and associated glue, wallboard and associated joint compound, 2'x2' rough textured suspended ceiling tile, 2'x4' suspended ceiling tile with checkered blocks pattern, 2'x4' suspended ceiling tile with worms and pin holes pattern, transite ceiling panel, floor expansion joint, exterior window glazing, exterior window frame sealer, exterior door frame sealer, and gray asphalt roof shingle.

A total of sixty four (64) bulk samples were collected from the Crash Unit Building (#85-004). The materials sampled include: 9"x9" white vinyl floor tile and mastic, 9"x9" black vinyl floor tile and mastic, two types of 4" brown cove molding and associated glue, 6" brown cove molding and associated glue, three types of carpet glue, wallboard and associated joint compound, exterior window glazing, interior and exterior window frame caulk, interior and exterior door frame caulk, 2'x2' suspended ceiling tile, two types of 2'x4' suspended ceiling tiles with long grooves and holes, 1'x1' fixed ceiling tile and associated glue dots and ceiling board, cloth flexible duct connector, gray asphalt roof shingle, flashing cement, roll roofing and associated adhesive.

Refer to Section II, Bulk Sample Location Diagrams, for bulk sample locations and identification.

Summary of Results

EnviroMed Services, Inc.'s accredited asbestos laboratory (NVLAP #1514) analyzed the bulk samples. Section III presents the complete list of analytical results for samples collected. The following presents the locations and estimated quantities of materials found to contain asbestos greater than 1.0 percent.

Fire Hanger Building #85-002 - Interior

Location	*ACM Material (Percent Asbestos)*	*Estimate Quantity*
Panel Room and Hall	9"x9" light tan vinyl floor tile (2-3%)	144 S.F.
	mastic under 9"x9" light tan vinyl floor tile (2-4%)	144 S.F.
	9"x9" brown vinyl floor tile (2-4%) under 9" light tan floor tile	144 S.F.
	transite ceiling panel above 2'x2' suspended ceiling tiles (8-10%)	144 S.F.
Engineering Office	transite ceiling panel above 2'x4' suspended ceiling tiles (8-10%)	256 S.F.

Fire Hanger Building #85-002 - Exterior

Location	*ACM Material (Percent Asbestos)*	*Estimate Quantity*
12 Windows	Exterior window frame sealer (25%)	10 S.F.

Crash Unit Building #85-004 - Interior

Location	*ACM Material (Percent Asbestos)*	*Estimate Quantity*
Dispatch Room	9"x9" white vinyl floor tile (2-3%) under brown carpet	256 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	256 S.F.
Kitchen and Hall	9"x9" white vinyl floor tile (2-3%) under brown carpet	300 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	300 S.F.
Lounge	9"x9" white vinyl floor tile (2-3%) under brown carpet	400 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	400 S.F.

Location	*ACM Material (Percent Asbestos)*	*Estimate Quantity*
K-9 Office	9"x9" white vinyl floor tile (2-3%) under blue carpet	240 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	240 S.F.
Room 1	9"x9" white vinyl floor tile (2-3%) under brown carpet	224 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	224 S.F.
Room2	9"x9" white vinyl floor tile (2-3%) under brown carpet	192 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	192 S.F.
Room 3	9"x9" white vinyl floor tile (2-3%) under tan carpet	224 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	224 S.F.
Room 4	9"x9" white vinyl floor tile (2-3%) under tan carpet	224 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	224 S.F.
Engineering Office	9"x9" white vinyl floor tile (2-3%) under brown carpet	240 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	240 S.F.
Supply Room	9"x9" white vinyl floor tile (2-3%) under brown carpet	72 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	72 S.F.
Bedroom 1	9"x9" white vinyl floor tile (2-3%) under brown carpet	272 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	272 S.F.
Bedroom 2	9"x9" white vinyl floor tile (2-3%) under brown carpet	176 S.F.
	mastic under 9"x9" white vinyl floor tile (2-4%)	176 S.F.
Main Hall	9"x9" black vinyl floor tile (10%) under brown carpet	320 S.F.
	mastic under 9"x9" black vinyl floor tile (3-4%)	320 S.F.

Crash Unit Building #85-004 - Roofs

Location	*ACM Material (Percent Asbestos)*	*Estimate Quantity*
Main Roof	flashing cement along roof interfaces and the base of chimney (10-15%)	65 S.F.
Canopy Roof	roll roofing adhesive (3-5%)	50 S.F.

Non-Asbestos Containing Materials Found During the Inspection

The following materials in the Fire Hanger Building #85-002 were found to contain legally insignificant amounts (0–1 percent) of asbestos: 12"x12" tan vinyl floor tile and mastic, 12"x12" tan with dark brown vinyl floor tile and mastic, 4" cream cove molding and associated glue, 4" brown cove molding and associated glue, wallboard and associated joint compound, 2'x2' rough textured suspended ceiling tile, 2'x4' suspended ceiling tile with checkered blocks pattern, 2'x4' suspended ceiling tile with worms and pin holes pattern, floor expansion joint, exterior window glazing, exterior window frame sealer, exterior door frame sealer, and gray asphalt roof shingle.

The following materials in the Crash Unit Building #85-004 were found to contain legally insignificant amounts (0–1 percent) of asbestos: two types of 4" brown cove molding and associated glue, 6" brown cove molding and associated glue, three types of carpet glue, wallboard and associated joint compound, exterior window glazing, interior and exterior window frame caulk, interior and exterior door frame caulk, 2'x2' suspended ceiling tile, two types of 2'x4' suspended ceiling tiles with long grooves and holes, 1'x1' fixed ceiling tile and associated glue dots and ceiling board, cloth flexible duct connector, gray asphalt roof shingle, and roll roofing material.

See Section IV for a copy of the laboratory analysis sheets for the samples collected.

Additional Notes:

1. The possibility exists that suspect asbestos-containing materials may be located behind fixed walls, under fixed flooring or above fixed ceilings. During renovation activities, upon the penetration or demolition of a fixed wall or ceiling, should any suspect materials be seen or become accessible, all activities shall cease and the materials shall be sampled by a licensed inspector to determine the presence of asbestos.

2. EnviroMed strongly recommends the use of Transmission Electron Microscopy (TEM) on vinyl floor tiles in cases where both the vinyl floor tile and flooring mastic were found to contain 1% or less asbestos using Polarized Light Microscopy (PLM). PLM has been found to give "false negative" results on floor tile samples due to the fact that the asbestos fibers are tightly bound into the matrix of the floor tile. As a result the asbestos cannot be easily detected using PLM. The use of the TEM analytical method will definitively determine whether or not the floor tile contains legally significant amounts of asbestos.

3. This inspection report shall not be used as a scope of work for asbestos abatement. The asbestos design specifications prepared by a licensed asbestos project designer shall only be utilized for the asbestos abatement.

IV. LABORATORY ANALYSIS SHEETS

Bulk Asbestos Analysis Report
25 Science Park New Haven, CT (203)786-5580

EnviroMed Services, Inc.

Sample ID #: IH-01-779-1H

Lab # 15923

Client Name, Address: CT D.O.T.

Sample Location: (Including Room, Building) Brainard Fire Hanger & Crash Units Bldg # 85-002 & 85-004

Sample Type: (Indicated by an "X" in the applicable column below)		
THERMAL SYSTEMS INSULATION:	SURFACING MATERIAL:	MISCELLANEOUS MATERIAL:
Boiler Insulation:	Spray-on Fireproofing:	Susp.Ceiling Tile:
Breeching Insulation:	Acoustical Plaster:	Fixed Ceiling Tile:
Pipe Insulation:	Ceiling Plaster:	Glue Dots:
Pipe Joint Insulation:	Wall Plaster:	Vinyl Floor Tile: X 9" light tan
Duct Insulation:	Wallboard Compound:	Flooring Mastic:
Tank Insulation:		Linoleum:
Flexible Duct Connector:		Roofing Material:
Valve Body Insulation:		Roof Flashing:
		Transite:
		Wallboard:
		Other:

Collected by: GF, TB

Analyzed by: David Kell

Date: 10/11/01

Date: 11/6/01

Analytical Method: Polarized Light Microscopy with Dispersion Staining

	A	B	C
Homogeneous (y,n)	Y		
Gross Appearance (color, texture)	tan fib		
Type of Asbestos Present	chrysotile		
Percent Asbestos	3%		
Morphology	wavy		
Refractive Index Parallel/Perpendicular	1.556 / 1.547		
Dispersion Colors Parallel/Perpendicular	Magenta / Blue		
Extinction Characteristics (parallel, oblique, wavy)	P		
Sign of Elongation (+/-)	+		
Pleochroism (color) Parallel/Perpendicular	N		
Birefringence (o,l,m,h)	L		
Type(s) of Non-Asbestos Fibers Present (and %)	5% cellulose		
Non-Asbestos Fibers Optical Property			
Type(s) & Percent of (non-fibrous) Materials Present	92% Particulate		
Total % Asbestos (sample)	3% Chrysotile		

Comments:

NVLAP Lab Code #1514 Mass. Certificate #A A 000049 NY Lab # 11187 CT Lab #PH-0571

Homogeneous (y,n)	y		
Gross Appearance (color, texture)	Gray Compound		
Type of Asbestos Present	Anthophyllite		
Percent Asbestos	<1%		
Morphology	Straight		
Refractive Index Parallel/Perpendicular	1.630/1.610		
Dispersion Colors Parallel/Perpendicular	magenta/Blue		
Extinction Characteristics (parallel, oblique, wavy)	P		
Sign of Elongation (+/-)	+		
Pleochroism (color) Parallel/Perpendicular	n		
Birefringence (o,l,m,h)	M		
Type(s) of Non-Asbestos Fibers Present (and %)	10% Cellulose		
Non-Asbestos Fibers Optical Property			
Type(s) & Percent of (non-fibrous) Materials Present	90% Particulate		
Total % Asbestos (sample)	<1% Anthophyllite

I. PROJECT NARRATIVE

Overview

On October 10 and 11, 2001, state-licensed inspectors from EnviroMed Services, Inc. (EnviroMed) performed an inspection at the Department of Transportation – Brainard Airport Maintenance Garage (Building #85-003), located on Brainard Road, Hartford, Connecticut. The purpose of this inspection was to identify the presence of asbestos in suspect building materials, so that any asbestos-containing material could be removed prior to periodic maintenance or renovation.

Samples were collected according to 40 CFR Part 763.86 and 29 CFR Part 1926.1101, and analyzed using Polarized Light Microscopy (PLM).

A total of sixty seven (67) bulk samples were collected. The materials sampled include: exterior window frame sealer, exterior overhead door frame sealer, exterior walk-in door sealer, boiler burner gasket, breeching cement, pipe insulation, boiler inspection cover gasket, interior window glazing, carpet glue, 4" brown cove molding and glue, wallboard and associated joint compound, 2'x4' suspended ceiling tile with slots and pin holes, 2'x4' suspended ceiling tile with bird feet 12"x12" beige vinyl floor tile and mastic, boiler clean-out cover gasket, boiler section rope gasket, gray roof flashing paper, gray roof flashing cement, and all layers comprising the built-up roofing material.

Refer to Section II, Bulk Sample Location Diagrams, for bulk sample locations and identification.

Summary of Results

EnviroMed Services, Inc.'s accredited asbestos laboratory (NVLAP #1514) analyzed the bulk samples. Section III presents the complete list of analytical results for samples collected. The following presents the locations and estimated quantities of materials found to contain asbestos greater than 1.0 percent.

Building # 85-003 - Roof

There is approximately 540 square feet gray roof flashing cement over gray roof flashing paper located along and on the top of parapet walls on this building. The flashing cement was found to contain 20-25 percent asbestos. The flashing paper was found to contain 30-35 percent asbestos.

Non-Asbestos Containing Materials Found During the Inspection

The following materials were found to contain legally insignificant amounts (0–1 percent) of asbestos: exterior window frame sealer, exterior overhead door frame sealer, exterior walk-in door sealer, boiler burner gasket, breeching cement, pipe insulation, boiler inspection cover gasket, interior window glazing, carpet glue, 4" brown cove molding and glue, wallboard and associated joint compound, 2'x4' suspended ceiling tile with slots and pin holes, 2'x4' suspended ceiling tile with bird feet 12"x12" beige vinyl floor tile and mastic, boiler clean-out cover gasket, boiler section rope gasket, and all layers comprising the built-up roofing material.

See Section IV for a copy of the laboratory analysis sheets for the samples collected.

Additional Notes:

1. EnviroMed strongly recommends the use of Transmission Electron Microscopy (TEM) on vinyl floor tiles in cases where both the vinyl floor tile and flooring mastic were found to contain 1% or less asbestos using Polarized Light Microscopy (PLM). PLM has been found to give "false negative" results on floor tile samples due to the fact that the asbestos fibers are tightly bound into the matrix of the floor tile. As a result the asbestos cannot be easily detected using PLM. The use of the TEM analytical method will definitively determine whether or not the floor tile contains legally significant amounts of asbestos.

2. The possibility exists that suspect asbestos-containing materials may be located behind fixed walls, under fixed flooring or above fixed ceilings. During renovation activities, upon the penetration or demolition of a fixed wall or ceiling, should any suspect materials be seen or become accessible, all activities shall cease and the materials shall be sampled by a licensed inspector to determine the presence of asbestos.

3. This inspection report shall not be used as a scope of work for asbestos abatement. The asbestos design specifications prepared by a licensed asbestos project designer shall only be utilized for the asbestos abatement.

I. INTRODUCTION

Introduction

Lead poisoning is a significant health hazard. High lead concentrations in the body can cause serious damage to the kidneys, the red blood cells, the central nervous system and the brain. One source of lead in the environment is lead-based paint. Leaded paint may contain up to 50% lead. Lead-based paint was widely used until it was banned in 1978.

Inspection Report

This inspection report consists of an introduction, project narrative, sample results table, sample results diagram and inspection data pages. Two reference pages are also included in the report. The cover page includes the project name and address.

The project narrative is an explanation of what was found during the inspection. This includes where the samples were taken, and the results of each test. The type of substrate under the paint and the condition of the paint are explained in this summary.

The data pages include the results of each test. This includes the sample numbers, the type of test used and the results of each test. These results are given in milligrams per square centimeter (mg/cm^2). The data pages also include the condition of the paint, and the substrate surface type. The paint condition and surface types are explained in reference tables A and B.

A Niton XL-309 XRF Spectrum Analyzer was used during the inspection. This instrument measures a paint sample until a 95% confident reading of "positive" or "negative" versus the toxic level of lead which is 1.0 mg/cm2 as deemed by the State of Connecticut.

The XRF is calibrated at the beginning and the end of the day's inspections or at extended delays in testing and (at least) every four hours during inspections. If at any time the instrument does not calibrate according to the standardized sample and the instrument limit of detection the instrument is taken out of service.

II. PROJECT NARRATIVE

II. PROJECT NARRATIVE

Overview

On October 11, 2001 EnviroMed Services, Inc. performed a lead inspection using a direct read spectrum analyzer for the State of Connecticut Department of Transportation, at Buildings # 85-002 #85-004 and Brainard Fire Hanger and Crash Unit, located in Hartford, Connecticut. The purpose of this inspection was to identify the presence of lead on the components prior to renovation/demolition.

The OSHA Lead in Construction Standard 29 CFR 1926.62 deems paint to be lead containing when any detectable lead is found. The State of Connecticut Lead Regulations deem paint to be a "toxic level" when X-Ray Fluorescence Analysis (XRF) exceeds 1.0 milligrams per centimeter squared (mg/cm^2), or 0.5% by weight in dry form. (19A-111-3). The State of Connecticut Department of Environmental Protection (DEP) regulations require building materials found to contain toxic levels of lead, to be Toxicity Characteristic Leaching Procedure (TCLP) tested for waste determination prior to disposal.

Summary of Results

XRF analysis was performed utilizing the Niton - XL 309 Spectrum Analyzer. Lead containing paint was found on building components. Please refer to the XRF Data Sheets for a list of all XRF results and the Sample Location Diagram for all sample locations. Toxic levels of lead were found on building components. Please refer to the XRF Toxic Level Sample Results Table for a list of toxic level XRF readings (greater than or equal to 1.0 mg/cm^2).

III. SAMPLE RESULTS TABLE

III. SUMMARY OF TOXIC LEVEL (≥ 1.0 mg/cm^2) XRF SAMPLE RESULTS

Summary of Toxic Level (≥1.0 mg/cm^2) Results

Sample Number	*Sample Location (mg/cm^2)*	*Component (s) Tested*	*Results*

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 11/21/2022 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
PRATT & WHITNEY, COL EPA ID:: CTD000844399	***COLT STREET***	***NNE 1/4 - 1/2 (0.392 mi.)***	***AA210***	***1062***

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 8 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the CT SHWS list, as provided by EDR, and dated 04/23/2010 has revealed that there is 1 CT SHWS site within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

CT SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the CT SWF/LF list, as provided by EDR, and dated 09/01/2022 has revealed that there are 3 CT SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal institutional control / engineering control registries

CT ENG CONTROLS: An Engineered Control is a permanent physical structure designed to safely isolate pollutants which would otherwise not comply with the self-implementing remedial options allowed in the Connecticut Remediation Standard Regulations (RSRs). The ECGD includes a description of what is eligible to be considered as an Engineered Control under section 22a-133k-2(f)(2) of the RSRs, a description of the information necessary for the preparation of complete and approvable applications, a step-by-step outline of the review and approval process, and supplemental resources provided in the appendices.

A review of the CT ENG CONTROLS list, as provided by EDR, and dated 09/15/2022 has revealed that there is 1 CT ENG CONTROLS site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 13 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there are 3 PFAS ECHO sites within approximately 0.25 miles of the target property.

CT CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CT CPCS list, as provided by EDR, and dated 09/01/2022 has revealed that there are 23 CT CPCS sites within approximately 0.5 miles of the target property.

CT LWDS: The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP.

A review of the CT LWDS list, as provided by EDR, and dated 07/17/2009 has revealed that there are 4 CT LWDS sites within approximately 0.25 miles of the target property.

CT SEH: The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

A review of the CT SEH list, as provided by EDR, and dated 06/22/2022 has revealed that there are 2 CT SEH sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

BRAINARD AIRPORT (Continued) **1010168655**

discharge does not adversely affect water quality.
Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Description:	The former Brainard Field is located on Maxim Road in Hartford, CT. The site was used by the CT Nation Guard beginning in 1933. Beginning sometime in 1940 the airfield was used by the War Department for the landing of Army, Navy, and Marine Corps planes making landings and take-offs on cross-country trips. The airfield initial consisted of two runways and a third was added. Brainard Field was assigned to the First Air Force in July 1942. DoD usage ceased in 1945. A portion of the site is currently used as the Hartford-Brainard Municipal Airport. Other portions are used as commercial property.
History:	The US leased approximately 420 acres from the City of Hartford beginning sometime in 1940. The lease was cancelled 1/13/1945 by the Air Technical Service Command. The site is currently owned by the

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110000786882

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

RYDER TRUCK RENTAL #0181A (Continued) **1004681109**

LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

NUTMEG INTERNATIONAL TRUCKS (Continued) **1000297328**

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
