Re: **PE1133-VER-20160615 – Cellco Partnership d/b/a Verizon Wireless
911 Route 32, Montville, Connecticut**

Dear Ms. Bachman:

On July 18, 2016, the Siting Council approved the above-referenced Eligible Facilities Request for modifications to the existing telecommunications facility at 911 Route 32 in Montville, Connecticut. The purpose of this letter is to notify the Council that on or about March 31, 2017, construction activity associated with these modification was completed.

In addition, certain minor field changes were made during the installation of Cellco's equipment. For example, Cellco's remote radio head was relocated from the tower to inside Cellco's shelter; one of the hybrid antenna cables has a diameter of 7/8" rather than the 1-5/8" cable, and two additional 1/2" cables were installed. Cellco's engineers are in the process of preparing an updated structural analysis for the tower taking into consideration these field changes. The updated structural report will be submitted to the Council as soon as it is completed.

If you have any questions please do not hesitate to contact me.

Sincerely,

Kenneth C. Baldwin
